PUBLICATION RIGHTS

Publication of any data or statements should not be made without prior written approval of Dr. Ronald L. Ritter, Department of Natural Resource Sciences and Landscape Architecture, Agricultural Experiment Station, University of Maryland, College Park, MD 20742-5821.

METHODS

LOCATION

Experiments were conducted at various locations including the Wye Research and Education Center (WREC), Queenstown, MD; University of Maryland Beltsville Field Unit (Hayden Farm), Beltsville, MD; and miscellaneous sites throughout Maryland. The location for each experiment can be found within the individual reports.

APPLICATION

Except as noted within a report, forages (alfalfa), small grains (barley and wheat), corn, soybeans, tobacco, and non-crop land or cover crops were sprayed with a CO2 pressurized backpack sprayer utilizing SS-8003 flat fan nozzles. Most sprayer applications, other than applications of postemergence soybean herbicides, were delivered in a total volume of 18 gpa (gallons per acre) at 20 psi (pounds per square inch). Spray delivery for the postemergence soybean herbicides measured 26 gpa at 38psi.

RATING SYSTEM

Visual ratings of weed control and crop injury were taken throughout the growing season based upon a 0 to 100 scale.

% Weed Control	0 = no weed control
	to
(% Bayer Code)	100 = total weed control
% Crop Injury	0 = no injury
	to
(% PHYTO)	100 = total crop dessication

YIELD

Small grain, corn, and soybean yields, when available, were obtained using a standard field combine, generally from the center of the plot. Grain weights were measured per plot. Moisture content was measured with an electronic meter. Plot weights were then converted to bushels per acre (Bu/A) at the standard moisture for the crop. Alfalfa was cut and weighed in the field, samples were dried down, and then the wet measurements were expressed in tons of dry matter per acre (TDM/A).

ABSTRACT

A. Trial Initiation

1. Study disced on 04/23/2004. Spread 418 lb/acre of ammonium nitrate = 142 lb N/acre.
2. Study planted on 04/29/2004, variety = Asgrow 664 YG/RR, at 26,000 seeds/acre.
3. Planter added 12 gallons of starter solution = 30-20-0 total plant food.
4. Kernel Guard was added as a seed treatment.
5. Preemergence applications made 05/01/2004.
6. Early post applications made 05/19/2004.
7. Mid-post applications made 05/26/2004.

ABSTRACT

A. Trial Initiation

1. Study disced on 04/23/2004. Spread 418 lb/acre of ammonium nitrate = 142 lb N/acre.
2. Study planted on 04/29/2004, variety = Asgrow 664 YG/RR, at 26,000 seeds/acre.
3. Planter added 12 gallons of starter solution = 30-20-0 total plant food.
4. Kernel Guard was added as a seed treatment.
5. Preemergence applications made 05/01/2004.
6. Early post applications made 05/19/2004.
7. Mid-post applications made 05/26/2004.

ABSTRACT

A. Trial Initiation

1. Study disced on 05/24/2004. Spread 418 lb/acre of ammonium nitrate = 142 lb N/acre.
2. Study planted on 05/24/2004, variety = Asgrow 664 YG/RR, at 26,000 seeds/acre.
3. Planter added 12 gallons of starter solution = 30-20-0 total plant food.
4. Kernel Guard was added as a seed treatment.
5. Early post applications made 06/16/2004.
6. Mid post applications made 06/24/2004.
7. Study harvested 11/10/2004.

ABSTRACT

A. Trial Initiation

1. Study disced on 05/24/2004. Spread 418 lb/acre of ammonium nitrate = 142 lb N/acre.
2. Study planted on 05/24/2004, variety = Asgrow 664 YG/RR, at 26,000 seeds/acre.
3. Planter added 12 gallons of starter solution = 30-20-0 total plant food.
4. Kernel Guard was added as a seed treatment.
5. Preemergence applications made 05/25/2004.
6. Early post applications made 06/16/2004.
7. Mid post applications made 06/24/2004.
