SCOPE 37

Biological Invasions

Scientific Committee on Problems of the Environment SCOPE

Executive Committee, elected 10 June 1988

Officers

- President: Prof. F. di Castri, CEPE/CNRS, Centre L. Emberger, Route de Mende, BP 5051, 34033 Montpellier Cedex, France.
- Vice-President: Academician M. V. Ivanov, Institute of Microbiology, USSR Academy of Sciences, GSP-7 Prospekt 60 letija Oktjabrja 117811, Moscow, USSR.
- Vice-President: Professor C. R. Krishna Murti, Scientific Commission for Continuing Studies on Effects of Bhopal Gas Leakage on Life Systems, Cabinet Secretariat, 2nd floor, Sardar Patel Bhavan, New Delhi 110 001, India.
- Treasurer: Dr T. E. Lovejoy, Smithsonian Institution, Washington, DC 20560, USA.
- Secretary-General: Prof. J. W. B. Stewart, Saskatchewan Institute of Pedology, University of Saskatchewan, Saskatoon, S7N 0W0 Saskatchewan, Canada.

Members

- Prof. M. O. Andreae (I.U.G.G. representative), Max-Planck-Institut für Chemie, Postfach 3060, D-6500 Mainz, FRG.
- Prof. M. A. Ayyad, Faculty of Science, Alexandria University, Moharram Bey, Alexandria, Egypt.
- Prof. R. Herrera, (I.U.B.S. representative), Centro de Ecologia y Ciencias Ambientales (IVIC), Carretera Panamericana km. 11, Apartado 21827, Caracas, Venezuela.
- Prof. M. Kecskés, Department of Microbiology, University of Agricultural Sciences, Pater K. utca 1, 2103 Gödöllö, Hungary.
- Professor R. O. Slatyer, School of Biological Sciences, Australian National University, P. O. Box 475, Canberra, ACT 2601, Australia.

Biological invasions: a global perspective/edited by J. A. Drake and H. A. Mooney.

p. cm.—(SCOPE; 37)

Papers from a number of national and international workshops resulting from a SCOPE program on the ecology of biological invasions initiated in mid-1982.

Includes bibliographies and index.

Funds to meet SCOPE expenses are provided by contributions from SCOPE National Committee, an annual subvention from ICSU (and through ICSU, from UNESCO), an annual subvention from French Ministère de l'Environment, contracts with UN Bodies, particularly UNEP, and grants from Foundations and industrial enterprises.

International Council of Scientific Unions (ICSU) Scientific Committee on the Problems of the Environment (SCOPE)

SCOPE is one of a number of committees established by a non-governmental group of scientific organizations, the International Council of Scientific Unions (ICSU). The membership of ICSU includes representatives from 74 National Academies of Science, 20 International Unions and 26 other bodies called Scientific Associates. To cover multidisciplinary activities which include the interest of several unions, ICSU has established 10 scientific committees, of which SCOPE in one. Currently, representatives of 35 member countries and 20 international scientific bodies participate in the work of SCOPE, which directs particular attention to the needs of developing countries. SCOPE was established in 1969 in response to the environmental concerns emerging at that time; ICSU recognized that many of these concerns required scientific inputs spanning several disciplines and ICSU Unions. SCOPE's first task was to prepare a report on Global Environmental Monitoring (SCOPE 1, 1971) for the UN Stockholm Conference on the Human Environment.

The mandate of SCOPE is to assemble, review, and assess the information available on man-made environmental changes and the effects of these changes on man; to assess and evaluate the methodologies of measurement of environmental parameters; to provide an intelligence service on current research; and by the recruitment of the best available scientific information and constructive thinking to establish itself as a corpus of informed advice for the benefit of centres of fundamental research and of organizations and agencies operationally engaged in studies of the environment.

SCOPE is governed by a General Assembly, which meets every three years. Between such meetings its activities are directed by the Executive Committee.

Preface

This volume represents the culmination of activity resulting from a SCOPE (Scientific Committee on Problems of the Environment) program on the Ecology of Biological Invasions. This program was initiated in mid-1982 and had its origins at the Third International Conference on Mediterranean Ecosystems held in Stellenbosch, South Africa in 1980. At that conference the considerable impact of invading plants on South African natural ecosystems was highlighted. Particularly noteworthy was that these invasions involved woody plants, such as Hakea, Acacia, and Pinus, and that they were aggressively entering and even transforming natural systems. The scientific consensus at that time was that invasions were only successful into disturbed ecosystems. It seemed therefore that the time had come to take a new look at the nature of invading plants and animals. At first the idea was to focus on the five mediterranean-climate regions of the world, all of which shared common invading species. However, in keeping with the mandate of SCOPE to advance knowledge on environmental problems of global significance the scale of the project became worldwide in perspective. At the General Assembly of SCOPE held in Ottawa in June 1982 the program was approved. The specific questions the program addressed were:

- 1. What are the factors that determine whether a species will be an invader or not?
- 2. What are the site properties that determine whether an ecological system will be relatively prone to, or resistant to, invasion?
- 3. How should management systems be developed using the knowledge gained from answering these questions?

The primary focus of the program was on the those animals, plants, and microorganisms that have been successful invaders of non-agricultural regions with an emphasis on those that have disrupted ecosystem function. It was felt that the SCOPE program should build on the considerable knowledge base available on invaders of agricultural systems but that it should concentrate its efforts on natural systems where there had been considerably less attention.

In order to carry out this mandate a scientific advisory committee was established consisting of:

H. A. Mooney, USA (Chairman)

F. di Castri, France

R. H. Groves, Australia

F. J. Kruger, South Africa

M. Rejmánek, Czechoslovakia and USA

M. Williamson, Great Britain

J. A. Drake of the USA served as the program coordinator.

The program has consisted of a number of national workshops (Australia, Czechoslovakia, Great Britain, Netherlands, USA, and South Africa) summarizing regional knowledge, and a series of international working groups addressing special problems. The latter included invasions into nature reserves, invasions into mediterranean-climate ecosystems, and modelling the invasion process. Finally a concluding international workshop was held to synthesize the regional and working group results into cross-continental comparisons. This book is the result of this culminating workshop held at, and co-sponsored by, the East-West Center of Honolulu, Hawaii.

The chapters in this book represent in large part extensions and refinements of treatments given to a topic early in the program. The shift in focus is from regional to cross-continental. A number of chapters, however, cover topics that were not addressed in the national workshops yet were important for a global treatment even though the information base was difficult to address for one reason or another. In total then, these chapters represent an assessment of where we are in our evaluation and understanding of the dramatic rearrangement of the earth's biota that has taken place over the last few centuries.

A list of the publications resulting from the entire SCOPE program is given in Appendix I. Appreciation is expressed to the scientists of many nations who participated in this SCOPE endeavor, to the A. W. Mellon Foundation for support of the effort, and to Anne B. Ferrell for continuous support.
