Table definitions next page

++ Effectes Determination abbreviations

NE = no effect

NLAA = (may affect) not likely to adversely affect

LAA = (may affect) likely to adversely affect

* Annual parameters identified should be monitored every year at the end of the growing season.

** Only 20 percent of these pastures will be monitored on an annual basis.

*** H = Highly sensitive M = Moderately sensitive

**** PFC - Proper Functioning Condition

ARUT - At Risk Upward Trend

ARDT - At Risk Downward Trend

ARNAT - At Risk Nonapparent Trend

NF - Non-Functional

? - PFC Assessment has not been completed

NA - Not Applicable

KA - Key Area

DM- Dry Meadow

WM- Wet Meadow

FP= Flood Plain

¹ Pastures within bull trout subsheds.

Cattle are gathered off the Mitten pasture, put in the upper end of the Whitworth Ck. Riparian pasture for part of a day or held overnight then moved on to the Drews Pasture and then to the ranch. This is a short duration use of the riparian pasture for about a 2 week period.
