

The Ag Container Recycling Council (ACRC) member companies have funded a nationwide program for collection and recycling of triple-rinsed plastic agricultural and specialty pesticide containers since 1992.

As arguably the oldest industry product stewardship initiative in the U.S., the ACRC program is now approaching a significant milestone; collecting and recycling of 100,000,000 pounds of HDPE plastic! While justifiably proud of their role, the ACRC members are equally aware that achievement of this milestone could not have happened without the support and participation of all of the organizations in the pesticide container supply chain, and local, state and federal government agencies.

As an expression of our gratitude to all of you, please accept our invitation to share in the celebration of our significant achievement. To those of you that are unable to participate in our celebration, we express our sincere gratitude for the time and effort that your organization may have contributed to this achievement. We look forward to working with you in the future in expanding and improving a sustainable pesticide container recycling infrastructure.
