I have just finished the article EXPANDING TIME TO EXIT in Fire Engineering Magazine. It seems to spend most of it's time on air management and getting more and bigger bottles vs. getting out faster when the alarm sounds. I would like to offer quick and sage egress as part of the solution. . My company's product, Liteline 360, has saved over 10 firefighters since 1994 that we know of. Three of these told the story to the Pittsburgh Post Gazette and the Chief of Roselle New Jersey wrote us a letter. All described how Liteline 360 saved firefighters who would have been lost and run out of air or just made it out of the structure before collapse. Liteline 360 shows a LIGHTED PATH OF EGRESS that allows firefighters to exit faster, safer and with less nervousness and accompanying increase in air consumption.

You can view Eiteline 360 and some of the articles at www.flexliteusa.com.

Thanks you

Paul Manley President Flexlite Inc.
