### REGIONAL AND STATE UNEMPLOYMENT, 2007 ANNUAL AVERAGES

From 2006 to 2007, annual average unemployment rates declined in 28 states and the District of Columbia, rose in 16 states, and were unchanged in 6 states, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Employment-population ratios decreased in 28 states, increased in 17 states and the District of Columbia, and remained the same in 5 states. Among the four regions, jobless rates were down in two and up in two; employment-population ratios declined in 3 of the 4 regions in 2007. The annual average U.S. jobless rate was 4.6 percent in 2007 unchanged from 2006, while the national employment-population ratio was essentially unchanged at 63.0 percent.

### Regional Unemployment

In 2007, the Midwest was the only region to post a statistically significant change in its annual average unemployment rate from 2006 (+0.1 percentage point). For the second year in a row, the South reported the lowest jobless rate, 4.3 percent in 2007, while the Midwest recorded the highest rate for the third consecutive year, 5.1 percent. The Northeast and South both registered jobless rates significantly below the U.S. rate, whereas the Midwest had a significantly higher rate than that of the nation. (See table 1.)

Three of the 9 geographic divisions reported statistically significant over-the-year unemployment rate changes in 2007. The West South Central and Mountain divisions registered significant rate decreases (-0.4 and -0.3 percentage point, respectively). The Pacific division had the only significant rate increase (+0.3 percentage point). The Mountain division again posted the lowest jobless rate, 3.6 percent, and the East North Central registered the highest rate for the third consecutive year, 5.5 percent. Five divisions recorded annual average unemployment rates that were measurably lower than that of the U.S.—the Mountain, 3.6 percent; South Atlantic, 4.2 percent; West North Central, 4.3 percent; and Middle Atlantic and West South Central, 4.4 percent each. The East North Central and Pacific divisions reported rates that were appreciably higher than the U.S. average, 5.5 and 5.2 percent, respectively. The Mountain division had the lowest annual jobless rate (3.6 percent) in its series in 2007. (All region, division, and state series begin in 1976.)

### State Unemployment

Ten states recorded statistically significant changes in their annual average unemployment rates from 2006 to 2007—five states registered rate decreases and five had rate increases. New Mexico and Texas posted the largest over-the-year jobless rate declines (-0.8 and -0.6 percentage point, respectively), while Florida, Minnesota, and Nevada reported the largest rate increases (+0.6 percentage point each). Forty states and the District of Columbia recorded annual average unemployment rates for 2007 that were not appreciably different from those of the previous year, even though some had changes that were at least as large numerically as the statistically significant changes. (See table A and chart 1.)

Hawaii again reported the lowest unemployment rate among the states, 2.6 percent in 2007, followed closely by Idaho and Utah at 2.7 percent each. The states with the highest unemployment rates in 2007 once again were Michigan at 7.2 percent, Mississippi at 6.3 percent, and Alaska at 6.2 percent. Twentyone states registered annual average unemployment rates that were significantly below the U.S. rate, while nine states and the District of Columbia recorded rates that were appreciably above it. Jobless rates in the remaining 20 states were not significantly different from the overall U.S. rate. Nine states posted the lowest annual jobless rates in their series—Arizona (3.8 percent), Idaho (2.7 percent), Louisiana (3.8 percent), Montana (3.1 percent), New Mexico (3.5 percent), Texas (4.3 percent), Utah (2.7 percent), Washington (4.5 percent), and West Virginia (4.6 percent). (See table B and chart 2.)

### Regional Employment-Population Ratios

In 2007, no region registered a statistically significant change in its annual average employment-population ratio—the proportion of the civilian noninstitutional population 16 years and over with a job. The Midwest and West at 64.8 and 63.5 percent, respectively, had employment-population ratios that were significantly higher than that of the nation. The South and Northeast had appreciably lower ratios, 62.0 and 62.1 percent, respectively. (See table 2.)

None of the nine divisions reported statistically significant changes in their employment-population ratios in 2007. The West North Central again registered the highest proportion of employed persons, while the East South Central continued to have the lowest proportion. Three divisions recorded employment-population ratios that were measurably higher than that of the U.S.—the West North Central (67.7 percent), Mountain (65.5 percent), and New England (64.9 percent) —and three had lower ratios—the East South Central (59.4 percent), Middle Atlantic (61.1 percent), and West South Central (61.9 percent).

### State Employment-Population Ratios

Four states posted significant decreases in their annual employment-population ratios in 2007, and one state recorded a significant increase. The largest decrease was in Michigan (-0.9 percentage point), followed by Vermont (-0.8 point), Minnesota (-0.6 point), and Texas (-0.4 point). Virginia was the only state to report a significant increase in its employment-population ratio (+0.1 percentage point). Forty-five states and the District of Columbia had 2007 employment-population ratios that were not appreciably different from those of the previous year.

Five states posted employment-population ratios of at least 70.0 percent in 2007: North Dakota, 71.2 percent; South Dakota, 71.0 percent; Nebraska, 70.7 percent; Utah, 70.3 percent; and Colorado, 70.0 percent. Nine states had employment-population ratios below 60.0 percent, with West Virginia and Mississippi registering the lowest ratios, 53.4 and 56.7 percent, respectively. In 2007, 23 states and the District of Columbia reported employment-population ratios that were significantly higher than that of the U.S., and 16 states recorded appreciably lower ratios. The remaining 11 states had ratios that were essentially the same as that of the U.S. (See table C and chart 3.)

### Note

All subnational estimates presented in this release were derived from updated time-series models with real-time benchmarking to national Current Population Survey (CPS) estimates. Subnational data reflect revised population controls and model reestimation. Historical data were revised back to 2003. Data for regions, divisions, states, and the District of Columbia are available back to 1976.

Consistent with the long-standing practice used in this release and the monthly Regional and State Employment and Unemployment release, the introductory section of this release highlights the direction of the

movements in regional and state unemployment rates and employment-population ratios regardless of their statistical significance. The remainder of the analysis, particularly in comparisons with the U.S. and over-the-year changes, reflects model-based error measures. BLS uses a 90-percent confidence level in determining whether changes or differences in subnational unemployment rates and employment-population ratios are statistically significant. Model-based error measures are available on the BLS Web site at http://www.bls.gov/lau/lastderr.htm. Data for Puerto Rico are derived from a monthly household survey similar to the CPS, and error measures are not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; TDD message referral phone number: 1-800-877-8339.

Table A. States with statistically significant unemployment rate changes, 2006-07 annual averages

|            | R    | Over-the-year |             |  |
|------------|------|---------------|-------------|--|
| State      | 2006 | 2007          | rate change |  |
| California | 4.9  | 5.4           | 0.5         |  |
| Colorado   | 4.3  | 3.8           | 5           |  |
| Florida    | 3.4  | 4.0           | .6          |  |
| Idaho      | 3.2  | 2.7           | 5           |  |
| Illinois   | 4.6  | 5.0           | .4          |  |
| Minnesota  | 4.0  | 4.6           | .6          |  |
| Nevada     | 4.2  | 4.8           | .6          |  |
| New Jersey | 4.7  | 4.2           | 5           |  |
| New Mexico | 4.3  | 3.5           | 8           |  |
| Texas      | 4.9  | 4.3           | 6           |  |

<sup>&</sup>lt;sup>1</sup> Error ranges are shown at the 90-percent confidence level and are based on unrounded data. NA = Data not available.

NOTE: Data refer to place of residence. Unemployment rates are in percent and are based on

unrounded levels. Data for subnational areas reflect revised population controls and model reestimation. As a result, they will not add to U.S. totals. Data for Puerto Rico are derived from a monthly household survey similar to the Current Population Survey.

Table 2. Employment-population ratios of persons 16 years of age and over by region, division, and state, 2006-07 annual averages

(Percent)

NOTE: Data refer to place of residence. Employment-population ratios are based on unrounded levels. Data for subnational areas reflect revised population controls and model reestimation. Data for Puerto Rico are derived from a monthly household survey similar to the Current Population Survey.

<sup>&</sup>lt;sup>1</sup> Employment as a percent of the civilian noninstitutional population 16 years of age and over.
<sup>2</sup> Error ranges are shown at the 90-percent confidence level and are based on unrounded data.
NA = Data not available.

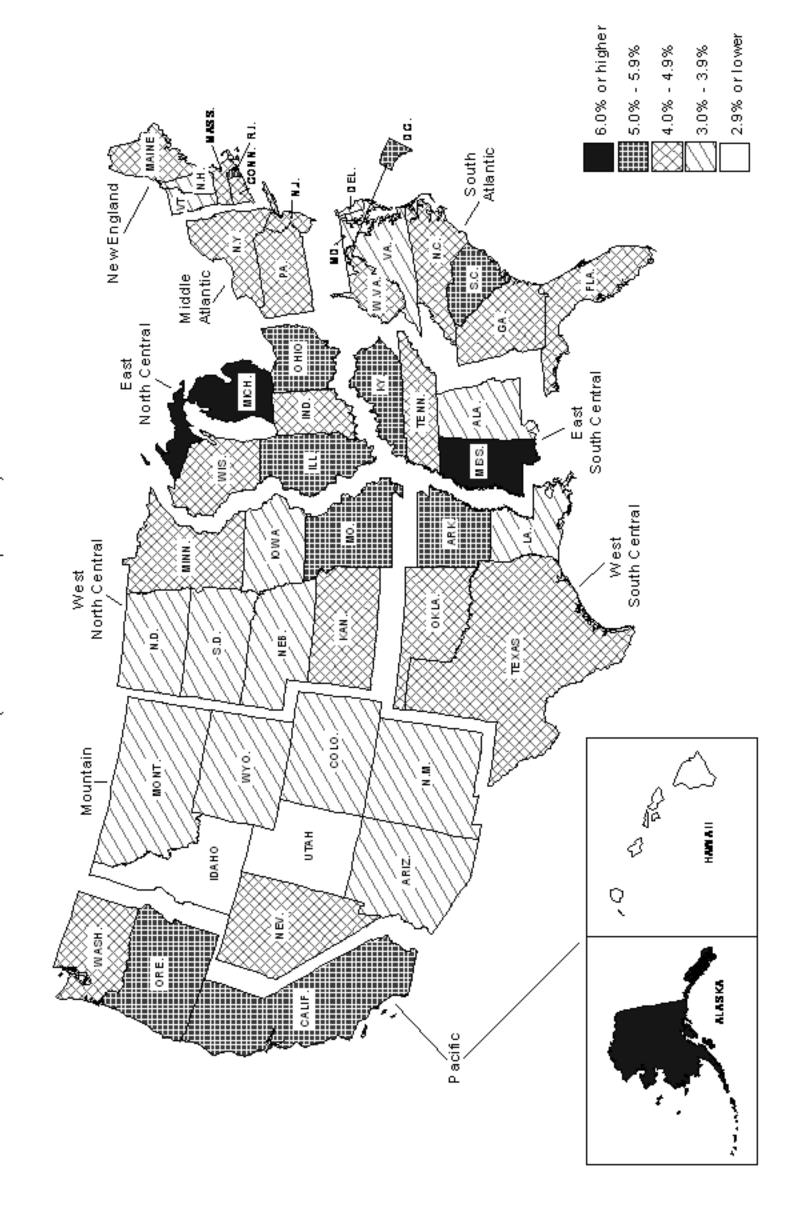

### Chart 1. Over-the-year change in unemployment rates by state, 2007 annual averages

(U.S. change = 0.0 percentage point)

## Chart 2. Unemployment rates by state, 2007 annual averages

(U.S. rate = 4.6 percent)

# Chart 3. Employment-population ratios by state, 2007 annual averages

(U.S. average = 63.0 percent)
