

1 I want to show you a picture of one
2 of the groups, participatory design groups
3 with whom I have been involved. These older
4 men, and you can see that actually they are in
5 a group of about ten people. They are sitting
6 in a room. They are looking at a draft
7 section of a guide on how to navigate your
8 Medicaid system. Everything from how to get
9 prescription information, to how to deal with
10 problems that you might have in, you might
11 counter in the healthcare system. And these
12 men were part of hundreds of people that I
13 worked with to design a guide that is intended
14 to go out to several million people in
15 California.

16 And I don't know how much you can
17 see out of this picture but these men were
18 involved in doing everything from selecting
19 photographs, to looking at the small stories
20 put under there, to looking at the tone of
21 what is written there so it wouldn't be -- it
22 would be considered welcoming and not

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 condescending, to look at the length of things
2 to do, and make sure that list was not too
3 long, that these things were actually feasible
4 things that real people could do, and so
5 forth, the placement of small chunks of
6 information and the amount of white space
7 around them. Every aspect of that, they were
8 involved with doing.

9 This picture here shows usability
10 testing for doing a website. I will not go
11 into the details of this but in the references
12 that I have to this presentation, there are
13 lists of recommended usability guidelines for
14 websites from the Department of Health and
15 Human Services. And so this kind of usability
16 testing, which is one-on-one, involves getting
17 people to sit with the examiner in this case
18 and look at a website, a draft of a website.
19 And then, especially people who are in the
20 lower literate group, can you understand that?
21 Can you move around here? Can you find what
22 you are looking for? Are the lists right?

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 So, any aspect of navigating a site or
2 understanding a site. And then when anything
3 is a barrier, that is marked down and revised
4 and the whole process continues another time
5 until it is completed.

6 So, I am going to enter with three
7 recommendations for things I think that the
8 FDA should consider to do to improve risk
9 communication.

10 The first would be something that
11 we have already talked about. And that is to
12 assess what is already going on here, to look
13 at the kinds of communication. And we saw
14 that there are so many kinds of mass
15 communication, the list is so long, I have to
16 keep looking at it every time to try to
17 remember which public health notification or
18 advisory and MedWatch and so forth.

19 So, there are many kinds of
20 communication. And I think the whole process
21 of analyzing how people respond to this
22 communication, in terms does it help them

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 improve their knowledge, attitudes,
2 confidence, their behaviors, etcetera, for
3 these diverse kinds of groups that we are
4 talking about.

5 The second one, we talked a little
6 bit about this morning and Deputy Commissioner
7 Torti also alluded to this and that is the
8 need to build capacity within the FDA around
9 communication. This is a big job, so we have
10 various comments here. And I will just go
11 through a few things here.

12 Internal expertise. There is
13 internal expertise in the FDA and we have had
14 the privilege of listening over the last few
15 months to a number of people who have
16 communication skills. But that needs to be
17 surveyed and identified and then brought to
18 the fore and those people could serve as
19 expert consultants within the FDA. As we have
20 heard, staff will be added. We talked about
21 the need for an FDA humanized and publicized
22 and, perhaps, trained spokesperson.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 The third one I would like to
2 emphasize here. I think there is a need to do
3 a strategic planning meeting. That would be
4 different than having a committee like this
5 convene, having all of you come, but actually,
6 an intentional strategic planning process,
7 which might take perhaps six months or a year
8 to figure out exactly what is in the Agency's
9 -- what the Agency's goals are and how it is
10 going to accomplish this, all of the resources
11 needed, all of the resources available,
12 etcetera, and how to fill those gaps.

13 Forming partnerships we have heard
14 about. Certainly there are a lot of
15 possibilities within the CDC, NIH, DHHS,
16 Office of Homeland Security, all kinds of
17 places could be supportive to the FDA in its
18 work.

19 And then, seek federal funding. We
20 did see a lot of smiles this morning when
21 people were being asked about the resources
22 available.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 The next recommendation is to
2 improve communication. And one of the things
3 I think can be done is to set some standards.

4 I would suggest a sixth grade level for
5 anything textual or on the web be a good goal.

6 Sixth to seventh grade to meet the needs of
7 the average person in this country.

8 To meet the Department of Health
9 and Human Services usability guidelines, there
10 are about 16 guidelines, I would add another
11 four for usability for lower literate people,
12 and then set some standards for linguistic and
13 cultural relevance. There are a lot of
14 standards already for accessibility for people
15 with disabilities. Section 508 of the
16 Workforce Reinvestment Act, etcetera, those
17 things I would assume the website is probably
18 already being designed with those.

19 I was very happy to hear that Dr.
20 Sanjay Koyani is heading that process. Not
21 any more? Well, he started the process. Oh,
22 well. More communicators there. Anyway, he

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 was one of the authors of the Department of
2 Health and Human Services usability
3 guidelines.

4 And finally, in case you didn't get
5 the message before, design and test with
6 diverse groups.

7 So, I thank you very much for your
8 attention. There is a number of references.
9 And anybody who is interested in having a copy
10 of this can get it off the website, I guess.
11 Thank you.

12 CHAIR FISCHHOFF: So thanks very
13 much. We have had talks and if they will, I
14 would like to invite the FDA panelists from
15 this morning to join us again. And we have,
16 really actually have the rest of the afternoon
17 for open discussion. So, I am taking names.

18 Well, as bashful as usual. Okay.
19 AnnaMaria. Wait until they sit down and then
20 we will get started.

21 MS. DESALVA: Thank you. I just
22 wanted to ask a quick follow-up question to

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 the discussion that was held earlier on the
2 subject of device recalls. And I, of course,
3 well remember as everyone else did, I am sure,
4 the discussion we had on the same subject in
5 February. And I am just wondering that stands
6 and if anyone from the Agency can maybe
7 clarify what may or may not be under
8 consideration in terms of supporting that
9 particular change in referring to recalls
10 specifically and renaming recalls, as
11 appropriate.

12 MS. RICE: Well I do know that
13 there is a group in our Office of Regulatory
14 Affairs that have been working for a couple of
15 years on looking at verbiage, terminology,
16 format for recalls but I don't know, I don't
17 have any particular details of what is going
18 on lately regarding that. I can tell you that
19 the Center for Devices and Radiological Health
20 did do focus testing on the term recall for
21 medical devices. We had about six sessions in
22 different locations with different types of

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 individuals with medical devices ranging from
2 walkers, you know, non-life sustaining life
3 supporting all the way to implants and we did
4 put out a number of different terms. And the
5 word recall did not seem to alarm them to a
6 great degree when they indicated they were
7 getting the information from a trusted source.

8 What we did see and again, I don't
9 have the report with me, that some of the
10 other terminology, such as safety advisory and
11 safety alerts to them did not get their
12 attention as much. And again, as I indicated
13 we do very limited numbers. And so six groups
14 of about 15 people is not a lot of people and
15 it was done locally. So, you are getting
16 people out of the Washington, D.C., Baltimore
17 area. So we do get different -- we get this
18 area perspective, which I don't believe is the
19 national perspective that we need to get.

20 That information is all with Office
21 of Regulatory Affairs and part of this
22 process. So Nancy, I don't know if you know

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 any more about it.

2 DR. OSTROVE: I think I can add a
3 little bit more detail. You probably also
4 recall that in addition to the focus group
5 research that was mentioned at the meeting
6 back in February that Mike Wogalter talked
7 about the work that he and Jennifer Cowley
8 did, which was not with local, I mean, which
9 was done down in North Carolina where they
10 specifically asked about, you know, use of the
11 term recall with regard to implanted devices.

12 My recollection is, and I don't
13 have it in front of me, is that there seemed
14 to be a fair amount of consumer preference for
15 using a term other than recall, in that
16 particular situation. We are currently in the
17 process of preparing like samples of the
18 template that ORA has put together for
19 testing, for kind of an internal testing
20 process. And I think that is one of the
21 questions. I think we need to have a sample,
22 basically, that uses the new template that we

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 have presented to you and which we have
2 revised somewhat based on the feedback that we
3 got from the committee. And I think we
4 probably need to have an example that
5 specifically deals with an implantable device
6 and ask that question specifically because I
7 think that is really --

8 But here is the problem. I mean,
9 we are using, for a number of reasons, we are
10 using kind of an internal group, but I think
11 we can probably get a reasonable number of
12 people who really don't have, who -- well, the
13 trouble is is finding the right audience. I
14 don't know how many people at FDA have
15 implanted devices. And obviously, that would
16 be the most appropriate audience to use.

17 So, it is a question that still
18 remains. It is still out there and I think
19 that it is something that, you know, we are
20 going to have to hit head-on fairly soon. But
21 I just can't give any more feedback than that
22 right now because we are still in limbo.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 MS. DESALVA: Thank you for that.
2 That is really helpful. And just to quickly
3 close off on that, who have been involved in
4 communication around actual corrections or
5 withdrawals of products of implantable
6 devices, the burden of communication, as you
7 know, is just incredible because of the
8 potential for misunderstanding and anxiety,
9 the fear. And I will talk about that a little
10 bit tomorrow. But it just seems that that
11 would be just an enormous step forward if, as
12 a result of the work of this committee, or
13 some of the discussions that have been held
14 here, that that could be addressed simply from
15 a terminology standpoint.

16 CHAIR FISCHHOFF: John has a
17 comment.

18 DR. PALING: I was just going to
19 suggest that as a default, it would seem
20 preeminently logical to always make
21 communications to the public with the
22 understanding those words -- with the

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 understanding that the public will take those
2 words to mean what they mean to the public in
3 general.

4 In other words, the default thing
5 should be we shouldn't be trying to find
6 whether this is a good way or not but we are
7 going to let's make the default because we
8 don't have time and money to do all of this
9 and then, I think, try and attack a series of
10 things. Like, safe and defective we will come
11 onto later and try and find alternatives that
12 really do communication as best we can see in
13 simple words that mean what the public in
14 general expect them to mean.

15 DR. OSTROVE: Well, can I? I mean
16 that is a very good point. But I think what
17 the question is is do we even know what the
18 public -- you know, we can take words out of a
19 dictionary and say this is how people
20 generally think about them but that is not
21 necessarily the case. So, you know, you run
22 into that problem where there may not be data

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 that specifically look at how people use the
2 term or, in fact, there may be, you know, you
3 could postulate that in certain circumstances
4 people understand this term differently.

5 As in the case where Lynn was
6 talking about, where people get the term
7 recall in a context from a trusted healthcare
8 provider, it has a different meaning, in some
9 ways, to them. So, without kind of looking at
10 that empirically, I mean, I am the biggest fan
11 possible of empirical investigation, you
12 really need to work at it. Because I think
13 that you will find, if you talk to people at
14 FDA, you will have one group of people who
15 will say, and they are experts, people
16 understand what a recall means and they
17 understand that when it is an implanted device
18 that it doesn't mean it should be taken out.
19 And you will have another group of people who
20 will say exactly the opposite. And then the
21 question is well, what is actually the case.

22 So, it is not clear what the

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 default would be in some of these
2 circumstances, although the point, the general
3 point I think is a really good one.

4 DR. GOLDSTEIN: To take off on that
5 theme but to get back to what Dr. Neuhauser
6 and Dr. Bruhn said, the important step of
7 assessing the needs of the population can't be
8 overstated. And we know that there are
9 certain populations that are more vulnerable,
10 they are more vulnerable because of their
11 illiteracy, they are socioeconomically
12 vulnerable. But then there are those discreet
13 populations of patients with conditions that
14 are using either pharmaceutical therapies,
15 devices, where we know there is not only a
16 professional organization that may be able to
17 link to them but also there are advocacy
18 organizations. And the importance of
19 assessment and then utilizing the
20 constituencies, the stakeholders, the
21 partnerships with the professional
22 organizations, the advocacy organizations,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 within those targeted populations specifically
2 when there is a known risk or a category of
3 risk. That would allow you to target your
4 efforts in developing these messages. And it
5 would start with some assessment but it would
6 also be important in designing a system that
7 includes them to get feedback about the
8 channels for communication.

9 So, it is not just about knowing
10 what the message is. It is about knowing what
11 the channels should be. And also knowing how
12 to evaluate the impact of the messages. It
13 actually is relevant at all three levels,
14 assessment, design and evaluation.

15 So, to answer those questions that
16 came up from each member of the panel earlier,
17 there is always going to be some uncertainty.

18 But especially when there is a lot of
19 uncertainty, the strategy is to involve the
20 specific target audiences as much as possible
21 in the assessment, design, and evaluation of
22 messages to that group. And that means

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 utilizing groups like the one we heard earlier
2 about, the Heart Rhythm Society. I can't
3 think of an audience that may be more relevant
4 for those kinds of devices, to have a
5 registry. You can access every single member
6 of that population. You need resources to do
7 that. That is where the federal government
8 could be helpful, perhaps. Yes, another part
9 of the federal government.

10 And I agree that this can't be FDA
11 alone. FDA has some limitations on its scope.

12 So other organizations have to be partnered
13 with within the federal government, as well as
14 outside the federal government to do this job
15 right.

16 CHAIR FISCHHOFF: Okay. Linda,
17 Mona, and then Musa, was it? Oh, Paul,
18 please.

19 DR. SELIGMAN: I am just going to
20 make a quick comment regarding the issue of
21 targeting because we have spent a fair amount
22 of time this last year talking to our MedWatch

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 partners. We have about 160 some odd
2 organizations that are partners. And one of
3 the messages we hear over and over from them
4 is, you know, all of these alerts go out every
5 day to all of these various organizations.

6 Is there a way we can tag or hone
7 our, or tag these messages in a way that if it
8 is drug related, if it is a product that only
9 dermatologists use or rheumatologists use, or
10 a cardiologist might primarily use, are there
11 ways that we can be smarter about using these
12 dissemination tools, it really goes, this is
13 really in advance of assessment, design and
14 evaluation. This is just taking what we
15 produce now and being smarter about getting it
16 into the hands of the right audiences. We
17 have just been talking to professional
18 organizations. The same goes as well for
19 consumer groups, and patient advocacy groups,
20 and others. They have, again, a great need
21 for information that is relevant and valuable
22 to their constituents as well. So we spend a

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 lot of time beginning to think internally
2 about how to be able to do that smartly.

3 DR. GOLDSTEIN: And there is
4 another group that I mentioned before and that
5 is the health delivery organizations. And
6 that includes the insurers, and that includes
7 the biggest insurer of all, Medicare, and the
8 second biggest, the Department of Veterans
9 Affairs.

10 And by the way, nothing I say is
11 related -- I have to say this, I forgot to. I
12 am an employee of the Veterans Affairs
13 Department. So nothing I say has anything to
14 do with them. I am here as a member of the
15 committee.

16 But we have these health delivery
17 organizations or healthcare provider
18 organizations that can also help, that have
19 their internal systems for communication and
20 messaging that can help shape the process, not
21 just the message, but the process for
22 delivering the message, and evaluating it.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 DR. SELIGMAN: And we currently
2 have an agreement, memorandum of understanding
3 with the VA and are now actually engaged in a
4 pilot with them where we take our drug
5 advisories and share them with the VA, usually
6 24 to 48 hours before they are made public, so
7 that the VA can begin to prepare their own
8 messaging and their own bulletins that they
9 distribute nationwide through their, I think
10 it is called a PBM bulletin.

11 DR. GOLDSTEIN: Right.

12 DR. SELIGMAN: So we are going to
13 do this, we are doing it now, as a pilot, with
14 a thought towards if it is successful, ways in
15 which we might broaden or engage a greater
16 audience so that relevant organizations can be
17 prepared at the time that FDA makes an
18 announcement to, you know, be in the position
19 to share with their constituents the
20 information and their interpretation and the
21 appropriate response to that.

22 DR. GOLDSTEIN: That is a fantastic

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 example.

2 DR. SELIGMAN: Yes.

3 MS. MCNEILL: I have one additional
4 comment. Paul noted that that is done through
5 a memorandum of understanding. Oftentimes
6 what we are doing when we are developing our
7 messages is dealing with information that is
8 not disclosable for any variety of reasons.
9 It might be pre-decisional. It might have to
10 do with an ongoing investigation.

11 And so, in the absence of such an
12 agreement, we may not be able to share that
13 information. And we may not be able to share
14 that information with some of our target
15 audiences to help us develop that message. So
16 that is another barrier, if you will, the
17 constraint to what we have to do, you know,
18 that limits the type of collaborative work we
19 can do.

20 CHAIR FISCHHOFF: Thank you.
21 Linda, Ellen, and members of -- well you heard
22 but if anybody from there has a comment, you

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 go to the head of the list.

2 DR. NEUHAUSER: My first comment
3 was related to the issue of using the term
4 recall. And one of the things I have found
5 working with groups who may have a different,
6 I mean many groups have different
7 understandings of meanings of words, but
8 especially lower literate groups who may have
9 heard a term only in a vernacular sense and
10 not understand a medical sense, say, like
11 recall.

12 And one of the things that they
13 have recommended doing is not getting rid of
14 the word, particularly, unless there is a
15 better word, but they like the word explained.

16 So, if there is, an alternate suggestion here
17 would be to take the term recall, put it in a
18 box on an advisory or whatever. Anything that
19 is going to a consumer or to somebody who is
20 going to be in contact with a consumer and may
21 need to take that information and give it to
22 them. And have it explain what recall means

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 for an implantable device. And in this case,
2 the advice would be that you would want to say
3 that there are some issues around safety and
4 of the device that the FDA regulates. And of
5 course, clear language in that. And that you
6 want the person to see their physician to get
7 advice. That is the action that they need to
8 take. Not necessarily to understand what FDA
9 means by recall but that is what they need to
10 do.

11 So, I think you could solve a lot
12 of problems that had to do with meaning. The
13 word safety and effectiveness. We will
14 discuss that maybe today, tomorrow. The same
15 things. Those have different meanings for
16 people. But as long as you explain it in a
17 way that gets to the point you want to make
18 with them, especially if they need to take
19 action, I think you have done your job.

20 The second comment is related to
21 Dr. Seligman's very good idea about working on
22 delivery of messages by tagging, segmenting

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 these for audiences. I think it is a terrific
2 idea. And this goes back to another reason to
3 have strategic planning processes that are
4 more intense and in-depth than we can do here
5 in a committee meeting that has a lot of
6 issues.

7 So, I would say if you got together
8 people, the right people, including members of
9 the various delivery organizations, you can
10 think of many of them, many you might already
11 have initial partnerships with, for two days.

12 You should be to come up with a terrific and
13 very low cost way to do, you know, you could
14 catapult the value of what you are doing to
15 the public and to providers by a factor of
16 ten, I think.

17 MS. RICE: I wanted to comment on
18 the term recall and the fact that we should
19 explain it. We actually do that. In the very
20 second sentence, what we do is, if it is a
21 recall for an implant, we explain that this
22 certainly does not mean that we need to talk

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 your implant out or that your physician does.

2 We say right away, please contact your
3 physician. Before we get into any of the
4 details of what the real problem is and what
5 the suggestions are.

6 DR. NEUHAUSER: And just one
7 comment about that, getting back to the
8 emotional thing. Sometimes, when people see a
9 word like recall they may associate with
10 something deadly, they may have an emotional
11 reaction as Dr. Peters and others were
12 explaining. So, it may not be enough to just
13 explain what a recall is but might have to put
14 in some language that acknowledges the
15 emotions that people might be feeling. We
16 know this might be difficult or might be
17 confusing. You know, whatever it is that can
18 say we are here with you and here is some
19 reassurance, and then here is what to do. And
20 again, those all need to be tested with
21 various kinds of people.

22 DR. KHANNA: Here is the headline.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 More bad news for patients with heart
2 disease. The tease before the commercial. If
3 you have a pacemaker, your life may be in
4 danger. Stay tuned. We will explain on the
5 other side of the break.

6 (Laughter.)

7 DR. KHANNA: After the commercial,
8 the story. The FDA has issued a warning for
9 people with implanted devices to control their
10 heart rhythm, etcetera, etcetera, etcetera.

11 So you all remember it wasn't too
12 long ago that the number of cardiology that
13 had to practically shut down their phone lines
14 after the media picked up the story about
15 sudden death and calcium channel blockers. Or
16 what about the number of OB-GYN offices that
17 had to shut down their phones after the media
18 picked up the story about the increased risk
19 of breast cancer, heart disease, strokes in
20 patients on hormone replacement therapy,
21 etcetera, etcetera.

22 So I just want to have us all keep

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 in mind that however many iterations we go
2 through or the FDA goes through, fine tuning
3 our message and esoteric, what may seem like
4 esoteric definitions, that the number one
5 vehicle for disseminating these messages
6 through the public, whether we like it or not,
7 is in fact the media. And that is when our
8 careful words that we have chosen are
9 basically out the window when the producer,
10 the reporter, the editors, and the managing
11 editor decides how they are going to phrase
12 it.

13 So it has to be simple enough that
14 somebody who is on deadline for the 4:00 p.m.,
15 5:00 p.m., 6:00 p.m., 7:00 p.m., and 10:00
16 newscast has to write it very, very quickly.
17 And I am not voting for which way to say
18 something. I am just saying that we have to
19 keep in mind that we are not the ones who get
20 the information out to most people.

21 CHAIR FISCHHOFF: And you were
22 implying, as all they hear is etcetera,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 etcetera, etcetera. Right?

2 DR. SELIGMAN: May I just make a
3 brief comment? And this is just an
4 observation but based on our work now over the
5 last couple of years with public health
6 advisories, you know, one thing we can't seem
7 to control are those who write the headlines.

8 But generally, the content underneath the
9 headlines seems to be generally fairly
10 balanced and reflective of what we want to
11 say. And we can't write the headline, as much
12 as we might like maybe to write that headline.

13 I mean, it was certainly true
14 around our early communication related to
15 Prilosec and Nexium. I mean, the headlines
16 are all talking about heart risk associated
17 with popular drug. But the content of the
18 articles basically said well, you know, there
19 isn't a risk out there that we are
20 highlighting here. We are talking about a
21 process of evaluation.

22 So, I think what you just pointed

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 out were the sort of the screaming headline.
2 You know, behind it, of course, may have been
3 coverage which may have been perfectly
4 balanced and well nuanced and truly reflective
5 of what it is that we were trying to say.

6 DR. KHANNA: I think that is okay
7 because I think when you write a headline or
8 say it, you want to cast a wide net. You want
9 to cast a wide net of everyone who has that
10 condition who then looks at the story.

11 So, I think it is okay if the
12 headline is a little looser. It is just the
13 content, like you are saying, the nuts and
14 bolts. The nut graph, we used to call it in
15 print, that needs to be an accurate reflection
16 of what we are trying to say.

17 DR. SELIGMAN: I couldn't agree
18 more. I agree about the nuts and the bolts.

19 DR. GOLDSTEIN: Can I just make a
20 point on that? Can I respond just to that one
21 point? Because actually it was Dr. Maisel who
22 made a point that I think is really important

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 and that is how we prepare the population for
2 the warnings ahead of time.

3 So, even it comes over the TV, if
4 that population has been informed, if that
5 specific target audience through their
6 communication with their clinicians, with
7 other forms of communication from the
8 government, etcetera, prepares them that this
9 is what recall means, and this is how to
10 respond, go to a website, you can go to your
11 doctor, too. But then go to a website because
12 you are patient with a device of this type.
13 And this information is going to be on that
14 website and you can be sure that it has been
15 cleared with the group that your doctor
16 belongs to that designs and works with these
17 devices. Then, you are at least mitigating
18 any fear factor and emotion that is going to
19 drive people to want to have their devices out
20 right away because you prepare them ahead of
21 time.

22 So, it is worthwhile to invest in

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 these, when we know the target audience, how
2 they might access these other resources in
3 these times when they get news that may be
4 important for them to hear.

5 MS. MAYER: I think it's me. Yes,
6 I have to respond to that. I don't think
7 anything can really be done about the media's
8 need to grab the attention of its viewers,
9 readers, and so on, but I think there is an
10 enormous amount of harm done. A recent
11 example in breast on MSNBC. You know, this
12 was the headline: "What if hundreds of
13 thousands of women with breast cancer were
14 getting a toxic chemotherapy that didn't help
15 them?" And the real story behind that was far
16 more nuance. Only a small proportion of women
17 actually have a preferential benefit from this
18 particular chemotherapy drug. It wasn't that
19 it didn't help them. You know, it was more
20 complicated. The headline was incredibly
21 misleading.

22 But that wasn't really why I raised

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 my hand to speak in the first place. I am
2 back with something that you were talking
3 about before. I am sitting here getting a
4 little concerned about our continued
5 discussion of the recall issue, of the use of
6 the word recall with regard to implanted
7 devices, because we are not really hearing a
8 full consideration of that question. We are
9 not hearing the FDA's position, most notably.

10 We are hearing the position of a professional
11 organization.

12 And I don't know what the
13 background in this case is but I do know that
14 it is not at all unheard of for both
15 professional organizations and advocacy groups
16 to be industry-funded and to, you know, have a
17 very strong representation of a particular
18 point of view. And I want to say that I am
19 not meaning to suggest that that is true in
20 this case. I am just saying that I don't
21 think we should continue to press for changes
22 on this particular issue because we are not

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 here to discuss that and we are not getting a
2 full presentation of all of the issues on
3 that. It is really not our -- in my opinion,
4 it is not what we are here to do.

5 CHAIR FISCHHOFF: Okay, thank you.
6 Ellen, then AnnaMaria and then Marielos.

7 DR. PETERS: I would like to switch
8 the focus a little bit off of recall and onto
9 an issue that has been brought up a number of
10 times, by a number of different people. And
11 that is the idea of simply the importance of
12 testing communications and particularly in
13 vulnerable populations.

14 And you can test communications and
15 after testing decide that you want to target
16 communications, like Dr. Goldstein has brought
17 up. You can even choose a strategy of do no
18 harm. So for example, sometimes you may end
19 up wanting to choose communications that maybe
20 they don't help people of high ability very
21 much but at least they don't do any harm to
22 people who have low ability. So, there are

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 different strategies you can choose,
2 basically.

3 But the pink elephant in the room I
4 think actually might be OMB. I think it
5 actually might be a huge obstacle that the FDA
6 has to actually being able to do this testing.

7 And I wonder whether part of what
8 we could talk about as a committee is are
9 there ways that, are there things that we, as
10 a committee can do to help facilitate things
11 for the FDA around this issue. So that there
12 are -- it is a political issue and it is a
13 huge political issue. And that is not
14 something that probably people in this room
15 can approach. Are there other people who can
16 approach it? I mean, that is the huge one.

17 If the FDA sponsors research, does
18 OMB have to be involved? I think the answer
19 to that is, if the FDA gives a contract to
20 somebody, OMB does have to be involved, but if
21 they do a grant, they do not have to be
22 involved, I think. I am not positive about

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 that. Okay, and Nancy is shaking her head.
2 So she can answer and say everything that I am
3 saying wrong in just a moment.

4 What about, and I believe it was
5 Dr. Seligman and Neuhauser who started this
6 conversation. If there are agencies who are
7 involved as partners in this communication
8 effort, is it possible that those agencies can
9 be encouraged to put some of their resources
10 to bear on testing these communications? So
11 basically what I wanted to start with a
12 communication about, how can the FDA do away
13 with some of the resource commitment that they
14 currently have to use, in terms of having to
15 go through OMB clearance all the time, which
16 is a two to three year process?

17 DR. OSTROVE: Well, if I could just
18 provide, maybe a little bit of context there.

19 I think one of the things that I do want to
20 point out that Lee made very clear to me is
21 that we shouldn't completely blame OMB. I
22 mean, OMB is following Congress' intent. I

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 mean, the OMB admittedly, there is some
2 flexibility in there but the Paperwork
3 Reduction Act of 1990 and then some later
4 ones, I think, are kind of what led to the
5 regulations that require that information
6 collection, as well as lots of other stuff,
7 needs to be reviewed by OMB and the
8 regulations kind of lay out the general
9 process. And they also have guidances out
10 there as to what is covered under this
11 requirement, so that, you know, if you are
12 doing research with nine or fewer people, you
13 do not need OMB clearance, for instance.

14 Similarly, there are exemptions.
15 So that clinical research, for instance, is
16 exempted. Research that we might want to do
17 in pursuit of a compliance action, some kind
18 of investigation having to do with compliance
19 of industry with the regulations, with FDA
20 regulations, would also not be something that
21 would have to be publicly disclosed. There is
22 a number of exemptions, and I can't possibly,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 I just can't recall them because those are the
2 major ones that I know of because we have had
3 to, you know, we have done research
4 specifically, kind of under that compliance
5 exemption in the past.

6 And over time, kind of the scope
7 has been unclear in some cases, and OMB has
8 clarified because of that lack of clarity so
9 that many years ago we operated under the
10 assumption that we did not generally need to
11 get focus group clearance, clearance for the
12 focus groups that we did. And then over the
13 last, I don't remember how many years ago it
14 was, probably about seven years ago, everybody
15 was told no, that is not the case. That is
16 considered to be kind of a type of survey
17 research, as long as you are doing it with
18 more than nine people and you can't get around
19 it by saying well, each focus group is
20 different. You know, as long as you have a
21 moderator guy that is basically the same and
22 you are asking the same kinds of questions,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 making the same kind of focus.

2 If we have a contract with someone,
3 that is something that needs to go -- if we
4 have a substantial interest, if we are
5 substantially involved either by providing
6 funding or we are interfacing with the group
7 and it is not like a clinical research study,
8 then it needs OMB clearance. I mean, I should
9 probably go back to the guidance and get that
10 information, kind of, and send you the pieces
11 that are relevant.

12 Grants, you know, I am not going to
13 be positive about grants by my expectation is
14 is that some of them probably are supposed to
15 get cleared but I would not say that for sure.

16 Okay? Contracts definitely. And again, you
17 know, there may be exemptions.

18 So that is kind of the basics and,
19 oh my goodness, I hope that I haven't said
20 anything wrong there because sometimes the
21 rules get a little unclear, which is why OMB
22 periodically puts out guidances to make let us

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 know what they are.

2 However, they do allow for
3 emergency clearances and there are what we
4 call generic clearances that we can get by
5 going through the whole process of the 60 day
6 notice and the response to comments and then
7 the 30 day notice, and then the 30 day review.

8 Because technically, those are the major time
9 frames. You have to give the public first 60
10 days to respond to your notice and then you
11 have to go out again and give another 30 days
12 at the same time you submit your request for
13 clearance to OMB. And then on top of that 30
14 days that the public gets the additional 30
15 days for notice, OMB then gets another 30
16 days.

17 But we have a number of clearances
18 that are generic in the sense that we have
19 gotten clearance for that general type of
20 research, which is one of the things that I
21 mentioned earlier with regard to the customer
22 satisfaction surveys. So now, we can, you

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 know, we can select from a bunch of questions
2 that we have sent into OMB. You know, and we
3 can even add some that are specific to a site
4 and send it in. And presumably within ten
5 working days, once we get it into them, they
6 will give us an answer. So, that can be done
7 quickly. We can also do that for focus
8 groups.

9 CDRH has had some rapid response
10 surveys that they have a generic clearance
11 for. Again, they are kind of limited in the
12 kind of questions that you can ask. Because
13 once you go outside of the realm of what they
14 have given approval for, then it starts
15 getting more problematic.

16 But in cases that are really,
17 really significant, we can ask them for
18 emergency clearance as well which, again, in
19 that case, you don't get the 60 days. You
20 just get the original 60 days. You just would
21 kind of send it in and ask for the 30 days and
22 then they would take another 30. So, there

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 are ways to get around it.

2 I am not defending and I am not
3 attacking them. They are fulfilling what they
4 believe is a congressional mandate and they
5 are doing it in the best that they believe
6 possible. And I am sure that they are aware
7 of the issues that it might cause. But you
8 know, they have their mandate, and we have
9 ours.

10 DR. PETERS: And I am simply trying
11 to point out the idea that I know you are
12 fully aware of, that there are benefits to the
13 public in testing these communications. And
14 there are some fairly large benefits because,
15 to some extent, part of what you do doesn't
16 matter until it gets communicated. And so
17 through the testing of communications, you can
18 become more effective communicators.

19 And generally, at least at the
20 universities when we are dealing with what we
21 would call IRB issues, rather than OMB, we
22 talk about the risks of conducting the

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 research and the benefits of conducting the
2 research. And there is a tradeoff between
3 them.

4 And here the benefits don't seem to
5 be weighed as much. Although perhaps, just
6 based on what you were just saying a moment
7 ago, I wonder if part of the strategic plan
8 that Linda was talking about earlier, part of
9 what goes into that strategic planning perhaps
10 could be what kinds of generic clearances can
11 we get in order to wrap risk communication
12 around more of the process.

13 DR. OSTROVE: I think that is an
14 excellent point. And I think that is one of
15 the things that we need to think more about is
16 how we might be able to expand this kind of
17 group of generic clearances to allow for
18 testing, for kind of rapid turnaround testing
19 of messages that will allow us to learn more
20 over a period of time and, as well, to kind of
21 allow us to build a better foundation on which
22 to do -- and also to test the stuff that we

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 are doing at that time. I have already dealt
2 with that one, right.

3 So, I completely agree. And I
4 think that from a strategic planning
5 standpoint, that is one of the things that we
6 probably do want to do. That in and of itself
7 becomes something that takes resources because
8 you have got to go through the initial
9 process. But is something that is doable.

10 I think what we need to do is to
11 talk more, you know sit down with OMB,
12 basically, with our people over there, with
13 their people and our people and see if
14 something can be worked out. And in that
15 sense, that is something that the committee
16 may very well be able to help with because
17 when we go out with the initial public notice
18 that we are kind of asking for this generic
19 clearance, that is something that we will be
20 asking for public comment on.

21 DR. SELIGMAN: Let me talk a
22 slightly different tact to your question,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 Ellen. And this involves what I would call
2 partnerships and leveraging. I think there
3 are extraordinary opportunities out there
4 beyond the realm of OMB cleared research which
5 could involve healthcare organizations,
6 associations, and a variety of groups who have
7 their own robust research programs and whose
8 interests there are in working with and
9 communicating with their own professional, as
10 well as patient population. I hate to keep
11 looking at the VA but the VA is a perfectly
12 good example of what can be done. You can
13 look at the private sector as well, whether it
14 is the Blues or HMOs or others.

15 So, I think those opportunities I
16 really think do need to be explored to the
17 fullest because I think there are those
18 opportunities for other groups taking our
19 messages and looking at how they play in their
20 own populations, amongst their own
21 constituents.

22 The second point I want to make is

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 that there are opportunities, and we have used
2 one of them in the last couple of years to
3 basically work with outside researchers and
4 how you translate their research work into
5 applied public health. And yes, actually,
6 they were part of references in your
7 presentation to Schwartz, Woloshin and Welch
8 at the Dartmouth Medical School and the White
9 River Junction VA, where we, I was
10 particularly intrigued by a presentation they
11 made two years ago on the prescription drug
12 facts box, which is a way portraying
13 numerically information about the benefits and
14 risks of a drug modeled after the nutrition
15 facts box and others. And they have done, as
16 you have pointed out in your presentation and
17 others have done a lot of research to indicate
18 that patients of all sorts can understand
19 numeric information and interpret it and use
20 it properly if it is presented in a careful
21 fashion.

22 So, we actually identified about a

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 half a dozen of our experienced clinical
2 reviewers in the office of new drugs over this
3 past year and actually had them work with the
4 Dartmouth group to create drug facts boxes for
5 ten drugs. And we looked at a whole range of
6 drugs from oncologic drugs to symptomatic
7 drugs. We looked at all of the problems
8 related to -- and this was because these were
9 the experts on the clinical trial data. They
10 really new these drugs backwards and forwards
11 probably better than anybody else in the
12 country, except for those who develop the
13 drugs on the sponsor side.

14 And you know, we hashed through all
15 of the problems related to when there are
16 multiple trials, some were the drug against an
17 active comparator, the drug against a placebo,
18 multiple doses. What do you do with studies
19 that have composite outcomes, like a lot of
20 the rheumatologic drugs or psychiatric drugs
21 that the outcome that they are measuring is
22 laboratory data, and x-ray data, and patient

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 symptom reports and a whole bunch of things.
2 How do you kind of put that together in a
3 fashion?

4 Well, we worked through a lot of
5 those and actually over this past year,
6 created a reviewer's handbook which sort of
7 talks about how you kind of work through a lot
8 of these issues. So, we are still working
9 internally within the organization. But here
10 again, this is research that is being done
11 external to the FDA. They get their research
12 grant monies from Robert Wood Johnson
13 Foundations and others. And they do all of
14 the work related to testing these boxes and
15 seeing whether they can be utilized properly.

16 And our role at the FDA is basically to
17 provide some expertise and to do some
18 feasibility work and to provide some thought
19 into how one might be able to construct and
20 create these.

21 So, I use that as an example of not
22 only translation but also an opportunity to

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 again, in this endeavor, partner with an
2 organization.

3 So, I didn't mean to give you a
4 long-winded answer but just to make you aware
5 of that.

6 CHAIR FISCHHOFF: Thank you. That
7 is very helpful.

8 It strikes me that, I mean we have
9 heard that the system, as it works now, my
10 personal opinion is that the system as it
11 works now with OMB is broken, that you are
12 under two incompatible directives. One is to
13 protect the American public and the second is
14 to satisfy the Paperwork Reduction Act. And
15 in some places by hook or by crook, you have
16 managed to get an exemption for this, to get
17 something for that. But in fact, a large
18 portion of the things that you would like, it
19 seems to me that FDA would like, to test
20 empirically to see how they degrade under
21 pressure, how they interpret it by different
22 organizations. You are simply not able to do

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 that.

2 And it strikes me that either much
3 of the work needs to go outside so somebody
4 else does it and then you use best practices
5 or else there needs to be a cabinet level
6 negotiation to say let's rewrite these rules
7 within the constraints of the negotiations for
8 having you, you know, fighting this kind of
9 gorilla warfare. You know and point by point,
10 where things just don't happen and you end up
11 responding in emergency just seems like really
12 unfair to you and unfair to the public that
13 you are trying to serve.

14 And this is bureaucratic politics.

15 The law has been in place for a while. These
16 are not electoral politics and it seems like
17 there is a cabinet level solution, which is
18 what you need. And maybe you know, out of
19 your strategic planning a commitment could
20 come and somebody could bash the appropriate
21 heads together and get you the ability to do
22 the kind of testing that you should be doing.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 As you may know, there was a
2 National Research Council Committee. You may
3 need to go to this but there was a National
4 Research Council Committee issued a report
5 about 18 months ago that said OMB was
6 incapable of monitoring, it basically said,
7 could not do risk analysis. It put out a
8 general guideline and it said this was
9 something that really needed to be left to
10 individual agencies, within some general
11 philosophical guidelines. So, the fact that
12 there has been a bureaucratic war that OMB has
13 been winning over a period of time, doesn't
14 strike me as something -- you may not be able
15 to say it but I think, you know, if we believe
16 it, it is our obligation to say that you are
17 trying to help the American public with one
18 and a half hands tied behind your back.

19 DR. OSTROVE: I think I am glad
20 that Paul brought that up. Because it seems
21 to me that what we need to do is to tackle
22 this on many fronts because sometimes the

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 academic researchers' interests and our
2 interests coincide.

3 We had, for instance, Mike Wogalter
4 was very interested in having one of his
5 students do this research that was directly
6 relevant to the development of this template.

7 Clearly, the Dartmouth group is very
8 interested in working with the information
9 that FDA puts out. So when it coincides, it
10 is like, it is beautiful and it is fantastic.

11 But sometimes it doesn't. You
12 know, sometimes there is just some mundane
13 stuff that we would like to test or something
14 that somebody else is just not that interested
15 in because it doesn't have a theoretical basis
16 or whatever. So it really does help for us to
17 have, you know, some of that capacity to do it
18 internally.

19 So my own sense is, it isn't one or
20 the other. It is like both or more. And we
21 have partnered with a number of different
22 groups, sometimes in a kind of very careful

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 position over the years to get the information
2 that we need. Sometimes we need to get it
3 ourselves. Sometimes we need others to get
4 it. Sometimes it is best that others get it.

5 Sometimes it is best that we get it. So, I
6 think we have to kind of put all of that
7 together in figuring out strategically where
8 we should be going.

9 CHAIR FISCHHOFF: AnnaMaria. And
10 we will stop at 3:30 and pick up then.

11 MS. DESALVA: I was just going to
12 briefly revert back to something that Mona
13 said and something that Musa said and to say
14 what I know we all know. Which is, that as
15 more emerging risk information becomes
16 available in real time, obviously, that is
17 very stimulating to the media who do need to
18 cast a wide net and are reporting news. And
19 when the Agency comes out and says that there
20 is something to be aware of, it feels like
21 news and it gets reported that way. And I
22 think we have all seen the negative downstream

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 affects of headlines that are either
2 sensational or inaccurate. And none of us
3 want that to pose a danger to people.

4 So, I am just wondering, and I am
5 sure it has been discussed at length but what
6 the Agency has considered by way of media
7 education about emerging risk information and
8 what you have already done. I just don't know
9 the current state of play.

10 DR. OSTROVE: I think we will have
11 someone here tomorrow. Heidi Rebello will be
12 speaking tomorrow and I think she would be the
13 best person to raise that with because I know
14 that there is media training that gets done.
15 But I don't know enough about it. Do any of
16 you?

17 DR. SELIGMAN: Yes. In my time
18 here, we have done some sporadic things. We
19 have actually invited the representatives from
20 the major media outlets to spend the morning
21 with us and sit around the table and ask
22 questions and learn a little bit about us.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 But I don't think we have ever really done it
2 in the sort of coordinated, consistent regular
3 way. And I know that yes, the Idea has been
4 considered many times. And I think that my
5 hope is that we will get to the point, as an
6 agency, where we do do that. Because I think
7 there are actually federal agencies that do do
8 this on a regular basis. And I think the
9 benefits from that have, I think, been pretty
10 well recognized.

11 MS. DESALVA: Absolutely.

12 MS. VEGA: One of the things for
13 me, in my opinion, that makes the issue of
14 communication more complex and difficult in
15 this country is the diversity of populations
16 in this country.

17 For example, I am from Costa Rica.

18 I was born and raised in Costa Rica and I
19 spent 19 years in there. And the population
20 there is more homogenous and so communication
21 is easier for agencies. But we come here and
22 the diversity is tremendous.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 There are organizations and
2 industries in this country that are very
3 successful communicating with consumers such
4 as the car industry, the pharmaceutical
5 industry, the fast food industry. I mean,
6 they get the people to do what they want,
7 which is come and get our products. But
8 again, they also spend billions of dollars in
9 advertisement. Unfortunately, I know the FDA
10 doesn't have that amount of money.

11 Recently I came across, I was
12 looking for some data on childhood obesity and
13 I came across, I don't recall exactly where
14 the information came from, but 93 billion
15 dollars is spent in advertising to children by
16 food industries.

17 So, the bottom line is then if we
18 are going to be successful in communicating
19 and testing all of these strategies, we need
20 money. I don't know where that money is going
21 to come from but we also perhaps can learn
22 from what others are doing successfully.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 I am not sure if anybody has ever
2 looked at also how communication is done in
3 other countries where the people who are
4 coming here are coming from. I don't have any
5 knowledge of that but perhaps we know where
6 people are coming from through the census. So
7 perhaps we can learn from how other countries
8 are communicating to the public and then try
9 to use some of those strategies for the people
10 who are from those countries in here.

11 CHAIR FISCHHOFF: Thank you. Let's
12 take a break now for 15 minutes and then we
13 will pick it up again.

14 (Whereupon, the meeting went off the record at
15 3:33 p.m. and resumed at 3:49 p.m.)

16 CHAIR FISCHHOFF: Okay. Thank you
17 all. Let's continue the conversation. I have
18 Linda who is not back yet. And then Mike, did
19 you want to wait until Linda gets back?

20 DR. SELIGMAN: Could I say
21 something just in response to what Marielos
22 said right before the break?

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 You know we are very much aware of
2 what other countries are doing by way of
3 communication, you know, particularly in the
4 European union. They have actually a whole
5 different set of structures and regulations
6 regarding particularly consumer-related
7 information, where it is basically required to
8 be produced by the drug manufacturers and
9 sponsors to be distributed. It is material
10 that is reviewed by the European Union. They
11 have a pretty, I guess I could describe it as
12 robust program, evaluative program as well.
13 So they do a lot more. I should say a lot
14 more but it is very different in this country.

15 I mean, there are certainly a lot of lessons
16 to be learned from the Europeans regarding
17 good practices.

18 And as a result, I mean, the other
19 thing about the European Union is that they
20 regulate a number of countries where lots of
21 different languages are spoken. And as a
22 result, there materials that are, you know, in

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 Spain prepared in Spanish, and in Italy, in
2 Italian, and in Belgium, probably in German
3 and Flemish and who knows what else. So a lot
4 of the language issues are dealt with in
5 Europe, just by the diversity of the
6 membership and the union and the fact that
7 sponsors, indeed, are producing consumer
8 friendly information probably in that whole
9 range of languages spoken in that sphere.

10 CHAIR FISCHHOFF: Linda and then
11 Mike.

12 DR. NEUHAUSER: I wanted to go back
13 to the issue of testing and all of the
14 challenges to get that done.

15 I wanted to mention that
16 participatory design is not a form of testing.

17 So, it is exempt from needing to go through
18 OMB. And it has, that is one of its great
19 advantages. The second great advantage is
20 that, if you do a participatory design, you
21 don't have to do as much testing. You might
22 cut your testing down by two-thirds because if

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 you don't do participatory design, you are
2 likely to have to go back and revise several
3 times. So, it is a time saver, a money saver,
4 an OMB avoider, lots of advantages there.

5 The second comment is that Dr.
6 Ostrove said that there is often a synergy
7 that works between universities doing research
8 on issues of interest to the FDA and sometimes
9 not. Sometimes the issues may not be that
10 interesting. But as a professor in a
11 university, I can say that I have plenty of
12 students who would love to work on something
13 of value to the public, in which there is a
14 huge scientific gap. I bet you can't find
15 anything that those student's wouldn't be
16 interested in doing. And if you just took
17 those of us around the table who have
18 connections with universities and Dr.
19 Fischhoff gave very good examples of how
20 students have done FDA relevant type work.

21 So, my suggestion, my practical
22 suggestion here is that as part of strategic

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 planning or just a suggestion right now, if
2 you could develop a research agenda of things
3 you want done and then you would have to think
4 about how to get it out. But there are, I
5 would say, for example, public health
6 associations. There are a lot of different
7 lists serves and ways to get this work out.
8 You probably have your list serves. I see Dr.
9 Seligman with his mind full of list serves
10 over there. I think you could come up with
11 ways to do it.

12 CHAIR FISCHHOFF: And the
13 suggestion might be that some other agencies
14 would say NSF or NIH, which is part of the
15 same department, might give extra, either have
16 a competition from its own money, or give out
17 added credit to proposals that were drawn from
18 this list.

19 DR. NEUHAUSER: Yes, and there is
20 so much overlap with FDA issues with say the
21 USDA because you share regulatory authority in
22 different areas. And I could see that it

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 would be very efficient to have some of the
2 research, is abundant at the USDA and which
3 does operate at the level of many diverse
4 audiences and relates a lot to communication.

5 It probably wouldn't be too hard to
6 piggyback some extra questions onto things
7 that are already being done. And that also
8 saves you having to pay for it.

9 DR. DAVIDSON: I would like to
10 address one of the more successful exchanges
11 with the USDA that we have had as put our
12 issues with the extension service grant and
13 have been getting enormously available
14 information through that mechanism.

15 I would also like just to speak to
16 a moment about the research involving groups
17 from other countries. An example of what we
18 have been doing in that area involves a recent
19 risk that we have had with unpasteurized --
20 cheeses made with unpasteurized milk that were
21 particularly popular in certain groups in the
22 Latino community. And we did formulative

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 research in East LA and in certain parts of
2 Texas talking with them about how they
3 actually recognized or how they described a
4 certain kind of cheese. And one of our
5 findings was that we Anglos always thought it
6 was queso fresco and they didn't recognize
7 that as a particular term of art to encompass
8 all the different kinds of cheeses that we
9 wanted to reach them.

10 But we used promotoras going out in
11 the communities, as well as the Latino media
12 to reach the audiences with our messages about
13 cheese and found that very successful. One of
14 the problems that someone had mentioned
15 earlier, however, is that it is a population
16 that turns over for obvious reasons and it is
17 very challenging to keep the messages
18 constantly out in the community. Promotoras
19 are costly, for example. The media needs to be
20 reminded over and over again to keep the
21 messages out front. So, it has been a
22 particular challenge of ours.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 DR. GOLDSTEIN: So I really
2 appreciated the presentations today. It was
3 particularly nice to hear from members of the
4 committee and I resonated with all of them but
5 I particularly resonated, Linda, with your
6 recommendations at the end. And particularly
7 since we were talking about this earlier, the
8 recommendations for the strategic approach to
9 a research agenda.

10 So, I wondered if you would be
11 willing to read that to us again and to see
12 how other members of the committee felt about
13 it, whether we can all endorse that as a
14 strong recommendation because I think that is
15 all central to the need that we are hearing
16 about in the FDA. Could you read us those,
17 that particular one again?

18 DR. NEUHAUSER: Well, the
19 suggestion was a simple one and that would be
20 to set up a strategic planning process and I
21 suggested, you know, it could be six months or
22 a year. And this is an idea that I am putting

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 out there without any knowledge of how
2 strategic planning operates in the FDA. So
3 there may already be strategic planning
4 processes that you have. So I am the
5 uninformed here. And maybe what I would
6 suggest is putting it back out to people, FDA
7 staff, and seeing what people have to say
8 about how those processes work now within the
9 Agency.

10 Obviously, you would need
11 leadership from the top and you would need
12 leadership across centers. I mean, there
13 would be a lot of just the process of trying
14 to define the process would be one that would
15 take some thought here. So, I wouldn't
16 probably go any further now because I know how
17 those operate in organizations in which I am
18 involved. But I am not sure, maybe some of
19 you would have comments if you have been
20 involved in these processes and how it works.

21 DR. OSTROVE: The FDA does have a
22 strategic planning process. And it is often

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 kind of built around the budget and that
2 cycle. But actually given that I am in the
3 office of planning, it probably, you know, I
4 think you are doing what you can in terms of
5 suggesting that. Well, both Lee and I are in
6 the Office of Planning and that is something
7 that we will raise.

8 It is something that we have
9 considered doing is setting a research agenda.

10 Oh, yes, absolutely. But it has not been the
11 highest on the priority list. But with all of
12 the ideas that I think are kind of coming out
13 now, I think it is something that deserves a
14 second look, in terms of moving forward on
15 that to the extent that we can.

16 DR. GOLDSTEIN: And we could
17 actually combine that bullet with the next
18 bullet because the strategic planning meetings
19 should involve partnerships with other
20 relevant, federal, state and professional
21 organizations. And I would add consumer
22 organizations to that list and healthcare

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 delivery organizations to that list to create
2 that agenda together because that would make
3 it so much more powerful and would actually
4 lead to potential joint funding for that
5 effort.

6 DR. OSTROVE: Well, I will take the
7 recommendation back. I mean, I don't make
8 guarantees about whether we would do it
9 internally, whether we would involve other
10 government agencies, whether we would involve
11 outside groups. If we involve outside groups,
12 it might in the context of having a meeting.
13 We discussed this. We in fact, years ago we
14 had a meeting looking at a research agenda for
15 direct consumer advertising that was actually
16 funded by the Assistant Secretary for planning
17 and evaluation. So it's not as if this kind
18 of thing has not been done. But I do have to
19 say that not very much substantive ended up
20 coming out of that. So, you know, I think we
21 have to make sure that we do it in a way that
22 we would get the most bang for whoever's buck

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 goes to funding. But I think it is a great
2 idea and it will be brought forward.

3 DR. GOLDSTEIN: Yes. Well you have
4 to be strategic about how you do the strategic
5 planning.

6 CHAIR FISCHHOFF: My feeling -- oh,
7 go ahead, Paul.

8 DR. SELIGMAN: No, I was just going
9 to say the only other thing that I might
10 mention is, you know, by way of engaging
11 organizations and developing an action plan,
12 there is one that is twelve-years-old now,
13 which is the Keystone Group out of Colorado
14 actually convened a broad range of
15 representatives to develop and action plan for
16 the Secretary around what constituted useful
17 consumer information that really brought
18 together a wide range of professional and
19 consumer, and industry organizations. And I
20 think out of that came a document that I
21 thought was pretty powerful and pretty useful.

22 It certainly withstood the test of time in my

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 mind, in terms of how one defines what the
2 elements of useful consumer information should
3 be. So it is the only model that I am aware
4 of where we have done that kind of planning in
5 a sort of broader audience. I know I think
6 you are pretty involved with that, I presume,
7 Nancy.

8 DR. OSTROVE: Yes, that was a
9 process that was actually Public Law 104180
10 that there be that process. And we funded it
11 but then we took a kind of hands off arms-
12 length and said here is your mandate from
13 Congress, go for it. And it did come out with
14 an action plan that has withstood the test of
15 time. But what a lot of the public doesn't
16 know is how controversial the discussions
17 were.

18 DR. SELIGMAN: The discussions were
19 difficult.

20 DR. OSTROVE: Yes.

21 DR. SELIGMAN: But it was a
22 certainly thorough process and I wasn't aware

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 but it may be one way of doing that, to be
2 able to sort of you know, giving a group like
3 that a charge, and then be stepping back. But
4 anyway --

5 MS. LAWSON: Just to piggyback on
6 what has already been stated, I think there is
7 such a wealth of professional expertise that
8 exists within the organization, both the
9 professional groups and consumer groups, and
10 the organizations certainly would rally around
11 the opportunity to collaborate with the
12 Agency. And I know it has been done over the
13 years for different projects, but I think you
14 should further explore the ways that, there is
15 such a resource out there and they would be
16 willing to work with you. And then you could
17 capitalize on that to get a lot of things
18 done. And it is all under the umbrella of
19 partnerships that they would become partners
20 in whatever the effort is. But I do think
21 that you have such a rich resource available
22 to you.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 DR. PALING: Dr. Seligman, you are
2 the first person I have met at the FDA who has
3 expressed knowledge about what is going on in
4 the EEC. It is not that you are the only
5 person. You are the first person I have been
6 able to speak to.

7 As you will know well, in the
8 European community, it was thought that
9 communicating probabilities was so important
10 and the ability to confuse the public,
11 typically, with descriptive words was so
12 great, that it was hugely important to try and
13 define some limited vocabulary to go with
14 levels of probability. Several of us have
15 discussed this in private here. I still
16 believe it is potentially a very useful thing.

17 Will you share your personal
18 opinions about the value of that and whether
19 it might apply here in this agency?

20 DR. SELIGMAN: Well you know, I
21 have -- I will just give you my personal
22 opinion. I have never been a fan of use of

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 the words like rare, or common, or likely. It
2 is why I really found the approach that
3 Woloshin and Schwartz and others were taking
4 about just, you know, give them the numbers.
5 So, that is just my personal bias. You know,
6 those kinds of descriptive terms are, in terms
7 of how one interprets them and uses them, are
8 so particular to the particular drug and the
9 context and the individual who is making a
10 choice about their own healthcare and what
11 risks they are willing to take, and what
12 competing issues they are confronting in
13 making a decision.

14 So, that is just my personal -- I
15 know that much vocabulary and many words have
16 been spilled on the battle field of trying to
17 characterize these things and I, that is sort
18 of where I have settled on that issue.

19 DR. PALING: I find that helpful.
20 Thank you.

21 CHAIR FISCHHOFF: Me, too.

22 Let me take us in a slightly

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 different direction which, and I am
2 particularly interested in my more academic
3 colleagues thoughts on this.

4 I think one of the things that
5 makes this area kind of difficult coming in
6 from the outside is there are these different
7 approaches. And you say, well, should I go
8 with the collaborative learning? Should I go
9 with the health belief model, the theory of
10 reasoned action? The stuff these decision-
11 making people do and so on?

12 So, this is the way I think about
13 it. And if you got into this, you would find
14 it is more, you know, the internecine warfare
15 is a little nasty. The review panels that are
16 controlled by health belief model. People
17 will not fund anything else. On the other
18 hand, for those of us who study decision-
19 making, that whole approach to decision-making
20 vanished from the literature in the mid-1970s.

21 I think nobody in decision-making thinks of
22 that class of linear model as actually being

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 capable providing much insight into people's
2 decision-making processes, that we believe
3 there are a class of linear models that if you
4 have some substantive insight, they are
5 guaranteed to give you weak correlations and
6 can't give you a whole lot more.

7 So, how do you sort these? But
8 people are very committed to their approaches.

9 So my thinking on this is that if anybody is
10 really, that these things are so complicated,
11 that if anybody has a theory, then you should
12 ignore them. You know, there couldn't be a
13 theory that applies to these complicated
14 situations. What you want is somebody who has
15 got an approach that will help you to respond
16 to the complexities of the task, the
17 complexities of the people, the complexities
18 of the situations, the communication channels
19 that you have.

20 And I think if you got -- so among
21 the people who use the theory of recent
22 action, or the health belief model, or the

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 stages of change theory or model, among them
2 you will find people who use that as a calling
3 card. It inspires confidence, gets them in
4 the door, and then they are very eclectic in
5 what they do. You know, they listen to
6 people. They do things that are not all that
7 different from the kind of collaborative
8 approaches that you have heard from Linda, or
9 from Christine, or from Ellen, or myself. And
10 what you really want is somebody who will
11 listen to the problem, you know who really
12 cares about the science, or some things matter
13 and some things don't, will listen to other
14 people. And that is really sort of the
15 critical screening characteristic.

16 And I am wondering, I guess I would
17 sort of be interested in what we look like to
18 the people who are actually solving problems.

19 And I would be interested in knowing what my
20 colleagues think.

21 DR. KHANNA: There is your
22 headline.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 DR. GOLDSTEIN: I don't want to
2 defend any particular model but I do think
3 there are some frameworks that are really
4 helpful. The framework that you articulated.

5 The framework that Linda articulated, the
6 socio-ecological model, which is really a
7 multi-level approach to understanding a
8 complex set of behaviors that cuts across the
9 different influences that come from those
10 different circles, those different sets of
11 factors.

12 So, because it is complex, I do
13 think we do need a multi-level analytical
14 approach to addressing the problem. And that
15 is one of the reasons I think to have some
16 bringing together of groups that are
17 stakeholders, so that they can identify not
18 only the important questions that have to be
19 asked but also the necessity of having
20 multiple different levels of both intervention
21 and analysis in order to address the big
22 problem. Because no one, there is not going

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 to be one study that is going to answer all of
2 the questions that need to be answered. There
3 is not going to be one level where we are
4 going to find all the variances accounted for.

5 It is going to be spread across all the
6 different levels. And we need bigger models
7 or models of models in order to fully
8 understand this kind of a complex set of
9 behaviors and issues.

10 DR. PETERS: Just to follow up on
11 it, there are some benefits, though, I would
12 say, Baruch, in terms of some of these models.

13 They remind you of things that aren't easily
14 available to you. So, similar to your earlier
15 work on car problems and auto mechanics,
16 sometimes different frameworks, and maybe it
17 is really taking, thinking about multiple
18 frameworks, rather than just a single one,
19 wills sometimes remind you that you need to be
20 asking questions that are down that route, in
21 order to help you better understand the
22 problem.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 And so starting off with the model
2 perhaps does give people, whether it is your
3 model or the health belief model or another
4 one, helps people to have a starting place to
5 remind themselves to ask different questions.

6 Because in the end, I would agree with you
7 that in the end what you have to do is you
8 have to listen to the problem and you have to
9 understand who it is relevant to and what
10 pieces of information are relevant and not
11 relevant.

12 MS. DESALVA: I have spent a lot of
13 my life just tearing down the models that seem
14 very ineffective. And when they are tested, a
15 lot of the communication models, I am thinking
16 of an article by, a study by Weinstein 1993 in
17 which he says that the linear communication
18 behavior change models are just strong enough
19 to avoid being thrown out all together. That
20 is not a very strong support.

21 But I would suggest and I have been
22 actually thinking about what combination of

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 models, like you were saying, Ellen, might be
2 ones to put together. And this conversation,
3 to some of you in the audience who were
4 thinking of very practical things might seem
5 esoteric. But I think if some day we could
6 make progress here, it would be a good basis
7 of guidance upon which to do more effective
8 activities.

9 So, what I have been thinking of
10 more recently is that the translational and
11 trans-disciplinary research models are
12 probably in combination with a social
13 ecological multi-level model. These are three
14 dimensional type models, in that they combine,
15 they look over time, they look from molecules
16 to society, etcetera. So, they really have a
17 lot of dimensions to them.

18 And what we are talking about here
19 at the base is trying to translate research
20 findings into better health for the
21 population. And so a translational research
22 model that cuts across disciplines and sectors

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 is the only way to really accomplish that.
2 And there are some very interesting models by
3 Abrams, Sussman, and a few others that have
4 been put forward in NIH conferences about
5 these issues.

6 So, I would suggest those would be
7 some. And then combined with perhaps some
8 models that have something to say. Diffusion
9 of innovations. I think that model still has,
10 I think it still holds water in terms of
11 adoption of new ideas. So there are things
12 but one would have to combine a lot. And I do
13 think it takes thinking that we haven't really
14 been bold enough to do, because it means
15 stepping out of a discipline, stepping out of
16 a comfort zone.

17 DR. BRUHN: In applying for grants,
18 we frame our research around a model. If you
19 don't, you are not going to get approved. You
20 are not going to get your money to do the
21 project. But I think once you are in the
22 project, a guiding principal that seems to be

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 effective is keeping in mind what is in it for
2 me. What they teach us in media training.
3 Why do I want to listen? Why do I want to
4 care? Why would consider changing my
5 practices? And however you frame that, that
6 is the most, however you frame what is in it
7 for them, I believe that is the most powerful
8 factor that will lead for understanding,
9 possibly changing, possibly adopting a new
10 behavior. You have got to show that it has
11 merit in whatever value structure that people
12 that you are working with is.

13 Your headline writer is always
14 going to write sexy headlines because it gets
15 people to look at their paper or to listen to
16 their program. And their business is staying
17 in business. And they want to be important.
18 If you can give them something that also makes
19 them appear credible, relevant, maybe get them
20 a few Pulitzer Prizes. Well a Pulitzer Prize
21 won't necessarily keep them in business. They
22 have got to be able to grab the public and we

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 have to be able to appear risk communication
2 messages. We have to be able to show that
3 this is important for the public and it is
4 going to help them achieve a higher quality of
5 life. And I think that is where we need to be
6 aiming in our communication strategies.

7 MS. DESALVA: I will just collect
8 my thoughts.

9 CHAIR FISCHHOFF: Okay. Somebody
10 was trying to volunteer somebody else who
11 wasn't quite ready. Mike?

12 DR. GOLDSTEIN: At the risk of
13 again getting too esoteric, it seems like the
14 kinds of questions we are asking are about
15 translation of research into practice or about
16 trying to understand the needs of populations
17 and sub-segments of populations. And in some
18 cases, we need to look at models that go
19 beyond traditional, empirically has to
20 randomize controlled, trial-based research.
21 We have to look at public health types of
22 approaches, dissemination research,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 translation research, and intervention
2 research. Don Berwick, who is the, I guess he
3 is the President of the Institute for
4 Healthcare Improvement has written recently in
5 JAMA about the importance of new paradigms for
6 testing interventions, where the interventions
7 are focused on improving the quality of care.

8 And in some ways, we are talking about
9 improving the quality of messaging, of
10 warning, or communicating about risk. So
11 there is linkages there. It is a very complex
12 phenomena.

13 So I think we can learn from some
14 of the practice base models, the testing that
15 may occur in a sequential way, an iterative
16 way, to help build our knowledge. It doesn't
17 have to be just in the traditional sense of a
18 controlled trial, testing one message against
19 another message, and looking at other
20 variables that may be covariant, and may be an
21 incremental approach to testing and looking at
22 the impact of what we do, what we are testing.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 CHAIR FISCHEHOFF: We got less
2 disagreement than I was hoping for there. So
3 let me just make a final comment, try one more
4 time to provoke something.

5 I think what happens is that people
6 are trained in a particular way, they get good
7 at a particular way of looking at problems and
8 I think your probably want somebody who is
9 really good at doing something. And some
10 people are really good talking to other
11 people, some people have their discipline in
12 looking at things analytically, and if that is
13 all they do, then you don't want to have
14 anything to do with them.

15 And the core is, as I think
16 Christine was saying, the core is trying to
17 find some disciplined way of getting what is
18 on people's minds, what do they care about,
19 and then matching that to the science of what
20 they can conceivably get or have dumped on
21 them.

22 And so my preference, I am sort of

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 an analytical guy and have my appointments in
2 engineering, and I am often trying to sell the
3 social sciences to natural scientists or
4 engineers, I find being kind of analytical
5 helps because then we have got models, too,
6 just like they have got models. But it is a
7 different discourse when you are working with
8 other people. And if we were just stuck
9 there, we would be in big, big trouble.

10 But I would say, you know, you sort
11 of start at one of these cores and then he
12 just had a checklist. You know, make certain
13 you thought about culture, about language,
14 about affect and so on. That might be the next
15 tier, that might be as far as the theoretical
16 structure needs to go. You know, something
17 you do well that basically talks to people and
18 listens to them. And then a checklist of
19 other issues and then get people who are
20 really, you know, either your audience or
21 other specialists who can inform you on that.

22 That is about as fancy as I would

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 like to get.

2 Okay. Yes, John.

3 DR. PALING: I took the fact that
4 you were seeking someone to be provocative as
5 an invitation to speak.

6 I would like to toss out a
7 hypothesis. We are all rightly interested in
8 a scientific approach to risk communication.
9 And I would like us to put a thought, that I
10 don't know whether it is valid but I would
11 like to get the view of my esteemed friends in
12 the FDA and my colleagues around the table on.

13 It is this.

14 Scientific principal is that you
15 really can't run before you can walk. And
16 one of the things I am just questioning is
17 whether a lot of our attention is being given
18 to try and advise on
19 risk communication in these of the more
20 difficult categories; vulnerable populations,
21 emerging issues, complexity. And I am
22 wondering, without trying to be provocative,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 what would happen if we put together ten
2 items, five items from each of the Centers
3 which were not vulnerable, which were not
4 emerging issues, which were not overly
5 complex, and we were to devise our
6 recommendations for what, in the best of our
7 knowledge, might make practical risk
8 communication strategies.

9 Because I am just wondering whether
10 we could be addressing the more intellectually
11 challenging and perhaps overly difficult
12 things for the stage we are at. I would be
13 glad of your input.

14 (Pause.)

15 DR. PALING: I rest my case.

16 MS. DESALVA: Actually, I will add
17 to that or just comment. I think that is a
18 very good point. And I think, you know,
19 sometimes from where I sit, which tends to be
20 sort of more in the real world of trying to
21 communicate in an effective way in real time
22 when issues are breaking, you can have the

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 best intentions in the world and have actually
2 very good resources, you know, tangible and
3 intangible resources to apply to the problem
4 and it can be very difficult to deliver an
5 incredibly crafted message that has had the
6 participation of stakeholders in its
7 development.

8 It is difficult when you have a
9 breaking situation. You know, and so
10 sometimes I think that when the situations are
11 less urgent and when you have more of the
12 daily obligation of just being thoughtful
13 about the way you are communicating about any
14 particular product and its risk benefit
15 profile. But that is often where, at least
16 from an industry standpoint, where the more
17 thoughtful work can be done simply because you
18 are not in a vice. You know, you are not
19 under extreme pressure to deliver information
20 to a wide range of stakeholders in a very
21 complex environment.

22 So, I think that is a terrific

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 point.

2 MS. MAYER: I have some hesitation,
3 John, in looking in that direction and here is
4 why. Most of the communicating I do about
5 risk is online. And it is to patients who
6 are, by virtue of their even being there,
7 information seekers. That is they are already
8 proactive in terms of reaching out to other
9 patients and healthcare providers as well
10 about making sure they are making the best
11 treatment choices, for example.

12 And I often feel like I am doing a
13 good job communicating to them but I am
14 preaching to the already converted. And I
15 think that knowing how to do that doesn't
16 really -- I think we all know that there is
17 only this small area that has -- the internet
18 has distorted my perceptions, in a way.
19 Because it is the internet and it reaches
20 around the world, there are hundreds and
21 hundreds and even thousands of people who
22 respond.

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 So, that makes it seem as if we are
2 reaching a lot of people but in reality, we
3 are reaching just a tiny fraction. I am
4 convinced of that. And we have no idea how to
5 reach all of the others, who may be defined as
6 being minority populations, or more
7 vulnerable, or any of those words.

8 But I think that there is even a
9 broader category which could probably be
10 better defined in a psychological dimension.
11 And that is, people who manage issues around
12 healthcare primarily by thinking about them as
13 little as possible, until they are forced to
14 do otherwise. I don't mean to say that in an
15 insulting way but there are the anxious
16 information seekers and there are the
17 avoiders. That is a reality.

18 So then the question is, if, as I
19 believe, the majority of us are among the
20 avoiders, how in the world do you reach people
21 whose spontaneous psychological makeup leads
22 them to not want to think about complex,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 difficult, painful, risky, unsafe, issues that
2 we are talking about. How do you even begin
3 to communicate to them when what they are
4 trying to do is not communicate, not be
5 communicated to. You know?

6 To me, it is a huge barrier to
7 overcome and I think it is a barrier that
8 transcends all population groups. At least
9 that is what I have observed.

10 DR. BRUHN: Well John, I think I
11 would like to see what that list would look
12 like. And that might make your suggestion
13 really exciting, depending on what is on that
14 list.

15 And again, looking at my area of
16 interest is in food, we don't want to tell
17 them things that are mundane. Because who
18 cares, really? And there is a lot of things
19 on people's plate, and they only have a
20 limited amount of time and attention, so why
21 look at something that is not important? I
22 think they have to know that what they are

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 looking at is important. That this is
2 information they need and they don't have.

3 Now, we have the challenge right
4 now in food safety because people think they
5 know what to do and in actuality they probably
6 don't. They know in general what to do but
7 they don't know the details and how important
8 some of the details might be.

9 So, whatever that short list is, it
10 would have to be an exciting list, where your
11 communication is telling them something new
12 and something interesting. And then you are
13 saying it in a way that they can remember it
14 and apply it to themselves.

15 So you said things that were not as
16 complex and perhaps that works. But I would
17 say it something that can be so exciting to
18 them that they care about finding it out and
19 they find out something that is new.

20 CHAIR FISCHHOFF: Nancy.

21 DR. OSTROVE: Here is the rub about
22 walking before you run. When we have time,

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 you know, when there is something that we can
2 do thoughtfully, actually we think we are
3 pretty good at that, in terms of putting
4 together the nutrition facts panel, in terms
5 of the recent revisions to the physician
6 labeling, in terms of the drug facts, the OTC,
7 the standardized label that we put together a
8 few years ago. Kind of we are less concerned
9 when we actually have the time to do it. It
10 is the complex issues that are really causing,
11 getting us the criticism and causing the
12 problems, which is why we are coming to you.

13 So, yes, I agree that from a
14 logical perspective you definitely want to
15 walk before you run, but in this particular
16 instance, I think we are running. The walking
17 part I think we are doing okay. It is the
18 running part that we could use a little help
19 with.

20 So, that is just kind of my
21 feedback on the issue.

22 MS. DESALVA: So in light of that

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 insight, I can agree with all of that and
2 understand it completely.

3 I suppose it is relevant, isn't it,
4 in terms of layers of complexity because it is
5 all complex. And you have hyper-complex
6 situations and then you have other types of
7 situations that are important or urgent with
8 drugs or devices or vaccines.

9 But they are more chronic. They
10 are more, you know, if you are dealing with
11 the aftermath of a major problem and there is
12 a population at risk that needs to continue to
13 be managed, there is a mandate there to do
14 that work on an on-going basis thoughtfully
15 but your pants aren't on fire. That is sort
16 of a marathon. It is not a sprint. You know,
17 so I guess it is relative but I can certainly
18 understand what you are saying. It does feel
19 like a constant sprint in many respects.

20 DR. SMITH: My first reaction to
21 John's comment was pretty similar to Christine
22 and Nancy. And then as I thought about food

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 some more, yes, you know, I think we do have a
2 nutrition facts panel but the American diet is
3 pretty poor. So yes, it is there and if
4 people want to use it, they can, but they
5 don't. And they don't really follow it and
6 they don't.

7 So, I don't know that that is not a
8 bad suggestion to take something as mundane as
9 the nutrition facts panel and really test some
10 assumptions and learn how to communicate it so
11 it is effective. Because communication is
12 great and if people -- everyone understands
13 what it is but they don't do anything. So how
14 do you take it to that next level, where it is
15 more than just, gee I know what a nutrition
16 facts panel is. And when they have dinner
17 with somebody like me who lectures them on
18 what they are doing, it is oh, great, it is
19 there. But then they still don't change.

20 And how do you change that
21 behavior? Because that is what you want to do
22 in a crisis situation but much faster and at a

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 much more accelerated rate. So, I don't know
2 that that is not a bad thing to pick something
3 like that and really get it to the different
4 level than we have seen recently.

5 MS. MAYER: I am reminded of the
6 community, is it in Denmark, who actually
7 managed to change a whole city's dietary
8 habits by means of -- there was an article in
9 The Times not long ago about this community.
10 But they just sort of took it on as an issue
11 at every level of the city government, all of
12 the restaurants, all the foods suppliers,
13 families, and so on. They brought it to a
14 community level, it is sort of like "it takes
15 a village," and were able to do some major
16 alterations in behavior.

17 It is clear that, I mean, I guess I
18 would like some clarification from FDA about
19 what they are looking for. Is it effective
20 communication that actually leads to
21 behavioral change that you are looking for?
22 Or is it, we are doing our part the rest is up

NEAL R. GROSS

COURT REPORTERS AND TRANSCRIBERS

1323 RHODE ISLAND AVE., N.W.

WASHINGTON, D.C. 20005-3701

1 to others? Which is sort of, it is a very
2 different thing.

3 Because I think what it takes to
4 change these fundamental behavioral and
5 psychological and emotional issues is far more
6 than the FDA an hope to take on.

7 DR. OSTROVE: And I would welcome,
8 also please, don't let me hang out here to
9 dry. I think it is a little bit in between
10 those. Because clearly, if you put out all of
11 the communications and it doesn't have any
12 impact at all, that is kind of a waste of the
13 taxpayers' money, essentially. So, we don't
14 want to do that.

15 Ideally, would we like to be able
16 to impact behavior? Absolutely, because there
17 are instances where, for instance, a product
18 has had to be taken off the market because the
19 healthcare providers' behaviors would not
20 change. Now, it may be that nothing we could
21 have done would have changed that behavior but
22 I am not sure that we are certain about that.

1 And you know, so that is kind of
2 like what we, I think, like to get a little
3 bit better at doing is at least moving in that
4 direction. And even if we can't necessarily
5 change the behavior, maybe we can have an
6 impact on the way people think about it.
7 Because once again, once you get, you know in
8 the whole risk communication thing, it all is
9 in there with peoples' values.

10 You know, and it may be that we
11 want them to do something. And they just feel
12 like, okay, I know what you want me to do and
13 I just don't agree. I am not going to do it.

14 Well, fine. You know, then the consequences
15 are that A or B happens. But at least we have
16 gotten them to think about it and we have done
17 our best to improve the situation so that we
18 don't have to remove a tool from the
19 environment because under its current
20 conditions of use, the benefits don't outweigh
21 the risks.

22 So, you know, that is kind of my

1 sense, that I would love.

2 MS. RICE: I would agree with
3 Nancy, that is probably a combination and it
4 depends on the situation. I think we would
5 like to be able to use both types of
6 communication or improve both types of
7 communication, both those to have people
8 change their behavior and the use of products,
9 and the ones that are just more effective in
10 overall understanding, as part of a bigger
11 picture.

12 As you said, we can't do it all.
13 In certain cases, we are not responsible for
14 doing it all, you know, as I alluded to
15 earlier with the kind of dual vaccine safety
16 responsibilities of FDA and CDC. So, I think
17 that somewhere in the middle, you know, I
18 think there is a little bit of all of that
19 that we would certainly like some help on to
20 improve how we do it.

21 DR. DAVIDSON: I would say from the
22 sense of CFSAN, we really do want to change

1 behavior, both from encourage greater label
2 usage, have people have safe food handling
3 practices, in the event of an emergency, stop
4 eating a certain food. That is definitely
5 what is within our interest and our scope.

6 DR. SELIGMAN: Yes, one of the
7 initiatives currently within CDER focuses on
8 safe use. And that gets directly to the whole
9 issue of how we can effectively influence the
10 behaviors of those who prescribe, dispense,
11 and ultimately use the products that we
12 regulate. So, I agree with the commenters.
13 You know, there are clearly things that are
14 within our circle of control, you know, what
15 we write and disseminate.

16 And then there are things that are
17 what I consider to be our circle of influence.

18 And clearly the safe use of products that we
19 regulate, I think, will continue to be in that
20 circle. I think we all care deeply about it
21 because that is ultimately why we at the FDA
22 are here doing what we do on any given day, is

1 to ensure that the products that we look at
2 are ultimately redounding to the benefit of
3 the public.

4 MS. MAYER: So just to be
5 provocative, throwing out another question to
6 the committee, do we feel like we have all of
7 the needed expertise around the issue of
8 influence? Like to influence. How to get
9 people to do what you want them to do. Is all
10 of that expertise represented around this
11 table? And if not, then could it be?

12 CHAIR FISCHHOFF: I have a point of
13 order. Linda, Ellen, the mike. We won't
14 forget that question.
