Subject: Growth-promoting uses of antibiotics

Name: Jane Henney, M.D. Commissioner

Company: Food and Drug Administration

Voice Number:

Fax Number: (301) 443-3100

Note: Dear Commissioner Henney,

The article by the Union of Concerned Scientist says it a lot better than I can. In the long run it will be a cheaper to have healthy meat and healthy people when these antibiotics are banned. It is difficult now to find meat from animals that have not been treated with antibiotics. The consumer does not have a choice anymore.

Thanks for your help.

Sincerely yours,

Christa McReynolds

TAKE *Action*

PREVENT UNTREATABLE DISEASES

WHAT'S AT STAKE

The effectiveness of antibiotics in curing human disease.

HOW YOU CAN HELP

Urge the Food and Drug Administration to ban the use of human antibiotics to make livestock grow faster.

WHAT'S HAPPENING

Many of the same drugs doctors use to treat illnesses such as food poisoning and staph infections are also used to raise pigs, chicken, and cattle for the kitchen. In animal factories, these same antibiotics aren't used just to treat sick livestock. They're also fed daily to healthy animals because producers believe that their animals grow quicker and reach slaughter weight sooner.

The Centers for Disease Control and Prevention considers the overuse of antibiotics in animal agriculture the principal cause of antibiotic resistance in food-borne bacteria like salmonella and campylobacter. By unnecessarily ~~pumping huge quantities of antibiotics~~ into healthy animals, producers are creating conditions where bacteria can quickly develop resistance to these drugs. When this happens—one strain of salmonella is now resistant to five antibiotics—doctors have fewer tools to combat human disease.

The European Union has already acted, banning all growth-promoting uses of antibiotics that have a role in human medicine. In June, the World Health Organization repeated its call for the "termination or rapid phasing out of the use of antimicrobials [which include anti-

Penicillin mold

biotics] for growth promotion if they are also used for treatment of humans."

But the Food and Drug Administration is dragging its feet. While it studies the problem, how many diseases will become untreatable?

We must act now.

WHO TO CONTACT
