Ms Jane Henney,

I am writing in regard to the use of  
antibiotic drugs on livestock.

Today many of our antibiotics are failing  
to protect us from many common bacteria, such  
as salmonella, because of the massive use and  
overuse on livestock we eat; chickens, cows, pigs,  
turkeys etc.

The Food & Drug Administration needs to;

- 1) stop the use of antibiotics in livestock,
- 2) drastically reduce its use in livestock, and
- 3) develop better way to raise livestock.

Sincerely,

John Spizia
