

Client Information about ProHeart® 6 (moxidectin)

ProHeart 6 (pronounced "Pro-hart" "six")
Generic name: moxidectin ("mox-ee-deck-lin")

This summary contains important information about ProHeart 6. You should read this information before your veterinarian administers ProHeart 6 to your dog and review it each time your dog is retreated. This sheet is provided only as a summary and does not take the place of instructions from your veterinarian. Talk to your veterinarian if you do not understand any of this information or if you want to know more about ProHeart 6.

What is ProHeart 6 and why has my veterinarian prescribed ProHeart 6?

ProHeart 6 is an injectable parasiticide that is used in dogs six months of age and older to prevent heartworm disease (*Dirofilaria immitis*) continuously for six months and to treat common hookworm infections (*Ancylostoma caninum* and *Uncinaria stenocephala*).

What should I discuss with my veterinarian before ProHeart 6 is prescribed?

Your veterinarian is your best resource for recommending appropriate medications for your dog. It is important to discuss your dog's health history with your veterinarian so he/she can decide if ProHeart 6 is right for your dog.

Which dogs should not be treated with ProHeart 6?

ProHeart 6 should not be used in sick, debilitated or underweight animals. ProHeart 6 should be given with caution in dogs with pre-existing allergic disease, including previous vaccine reactions, food allergy, atopy, and flea allergy dermatitis. Dogs should be tested for heartworm disease prior to being treated with ProHeart 6. If your dog tests positive for adult heartworms, your veterinarian should treat the infection with an appropriate medication before administering ProHeart 6.

What possible side effects of ProHeart 6 should I look for in my dog?

- Severe allergic reactions (anaphylaxis): facial swelling, itching, difficulty breathing, collapse
 - Lethargy (sluggishness), not eating or losing interest in food, any change in activity level
 - Seizures
 - Vomiting and/or diarrhea (with and without blood)
 - Weight loss
 - Pale gums, increased thirst or urination, weakness, bleeding, bruising
- * If you notice any of these side effects or have any concerns about your dog, please contact your veterinarian as soon as possible.

Can ProHeart 6 be given with other medicines?

In well-controlled clinical studies, ProHeart 6 was used safely in dogs receiving other veterinary products such as anthelmintics, antiparasitics, antibiotics, analgesics, steroids, non-steroidal anti-inflammatory drugs (NSAIDs), anesthetics, and flea control products. ProHeart 6 should not be given within one month of your dog being vaccinated. Tell your veterinarian about all medicines you have given your dog in the past, and any medicines that you are planning to use with ProHeart 6.

How long will ProHeart 6 remain in the body?

Several studies have shown that by the end of the six-month treatment period, the amount of ProHeart 6 remaining in the body is too small to measure. An additional study demonstrated that after four consecutive treatments there was no accumulation of ProHeart 6 over time.

What else should I know about ProHeart 6?

This sheet provides a summary of information about ProHeart 6. If you have any questions or concerns about ProHeart 6, talk to your veterinarian.

Read the package insert for more information.
