CDC Environmental Public Health Leadership Institute Projects

The Centers for Disease Control and Prevention (CDC) Environmental Public Health Leadership Institute (EPHLI) is a 1-year program of seminars and workshops, special projects, and individual study. Each year, up to 30 practicing environmental public health professionals are admitted to the program. Since 2005, 113 fellows have graduated from the institute.

Leadership Projects Available Online

EPHLI fellows incorporate new tools and problem-solving strategies into their leadership projects as they progress through the institute.

Final leadership project reports from the EPHLI fellows are indexed online under more than 60 keywords (http://www.cdc.gov/nceh/ehs/ephli/keywords.htm). Executive summaries, author bios, and poster and oral presentations are also available (http://www.cdc.gov/nceh/ehs/ephli/projects.htm).

“EPHLI has taught me how to think differently about solutions and challenges, looking at causality and root problems instead of reaction-based activities and the status quo.” —Jefferson Ketchel, Public Health—Seattle and King County

These final reports address the CDC Health Protection Goals of
