**Subject:** stop the ADHD patch

ARE YOU KIDDING ME?

How much more data does the FDA need to STOP the drugging of Americas children. THERE IS NO SUCH THING AS ADHD. It's a made up illness used to label and drug millions of innocent children to the tune of billions in drug profits. The FDA knows this. They know there is no test for ADHD. They know it is a purely subjective "diagnosis" based on a a list of criteria that at one time or another EVERY SINGLE CHILD IN THE WORLD demonstrates. It's a fraud. When will someone have the stones to stand up to Big Pharma and say ENOUGH IS ENOUGH.

Because the day is coming, and anyone that had anything to do with the support, advocacy, or facilitation of the drugging of Americas children will be held accountable. Those involved in this Fraud will fall hard. Prison, billions in damages awarded in class action lawsuits, you name it.

Those of us fighting for truth and the protection of our children will never relent.

Which side will you be on?

Ron Meyerson
