## Leifson strains

1

f.A.

His letter states their origin as follows: a culture sent for identification was streaked for single colonies which were picked and numbered RL,R2, etc. We received

R7 2/4 motile (-SW 576)	<b>derive</b> d	from	colony	R7, (motile)
<b>R7</b> 3/5 paralysed (=SW 575)	at .	11	17	F2 F3
R12, paralyzed (#SW 586)	11	18	Ħ	R12 (paralsed)
R14, 2/4 " (=Sw 587)	93	n	н	R14 "
FM 59764 " (=SW 580)	11	11	It	n
FM 60/62 motile (=SW 579)	Ħ	n	ħ	11
FM 57/66 skdwly motile, 90% w."cu	rly" fla	gella	(SW 57	<b>17</b> H
FM 61/63 paralysed (=SW 578)				but via FM 1/7,
a motile reversion; 1.e. 578 represents an independent mutation to para-				
lysis.				
575 constitutés a 3rd occurrence of	this mu	ita <b>tio</b>	n, but	586 and 587 could be part
of the same clone as 580.				
R20 1/2 "O" ( SW 573)	derive	d fro	m colon	n R-20
R 20 1/4 "0" (SW 574)	H	11	Ħ	19
