World Agricultural Production

Record Brazil soybean production despite area loss

Higher Reported Yields in Brazil's Major Soybeans States Lead to Record Production

Brazil's soybean production for 2006/07 is forecast at a record 58.8 million tons, up 3 percent from last month, and up 3 percent from last year's revised estimate. Harvested soybean area for 2006/07 is forecast at 21.0 million hectares, unchanged from last month but down 6 percent from last year. Yield is forecast at 2.80 tons per hectare, up 3 percent from last month and up 9 percent from last year. Optimal weather throughout the growing season has been observed by most soybean regions which has more than offset yield losses due to mid-February wetness in north-central Mato Grosso. As harvest progresses, this month's increase in production is mainly due to higher than expected reported yields especially in Mato Grosso, Parana, and Rio Grande do Sul. Mato Grosso, Parana, and Rio Grande do Sul account for approximately 29, 18, and 13 percent of the total production, respectively. Harvest progress has been swift due to earlier than normal plantings, greater use of short season varieties, and good weather. As of March 30th, 59 percent of Brazil's soybean crop had been harvested, compared to 49 percent this time last year, and 46 percent on average. Mato Grosso is 90 percent harvested, compared to 66 percent on average. Parana is 73 percent harvested compared to 65 percent on average. Rio Grande do Sul is the last state to be harvested; approximately 17 percent of its crop has been collected compared to 7 percent on average. *(For more information, contact Nicole Wagner at 202-720-0882).*

Approved by the World Agricultural Outlook Board

Record Brazil Cotton Production Due to Good Weather and Higher Input Use

Brazil's cotton production for 2006/07 is forecast at 6.3 million bales, up 5 percent from last month, and up 34 percent from last year. Harvested cotton area for 2006/07 is forecast at 1.07 million hectares, up 4 percent from last month, and up 25 percent from last year. A record cotton yield is forecast at 1288 kilograms per hectare, up slightly from last month, and up 7 percent from last year. According to historical data, harvest should be most advanced in Parana and Mato Grosso do Sul and harvest is getting underway in Bahia, Minas Gerais, Sao Paulo, and Goias. Harvest will begin in Mato Grosso in May. Mato Grosso, the largest producing state accounts for 51 percent of the country's total cotton while Bahia and Goias, the second and third largest producing states, account for 13 and 12 percent of the crop, respectively. Strong internal prices and an expected stable exchange rate led farmers in the high-yielding states of Mato Grosso and Bahia to increase their planted areas, thus accounting for the large increase in area over last year. As the growing season has progressed, however, the exchange rate has become more unfavorable and cotton has not proven to be as profitable as hoped, according to the Brazilian Association of Cotton Producers (ABRAPA). Earlier this season FAS Office of Agricultural Affairs Brasilia reported that Brazilian farmers had committed up to 60 percent of the future cotton crop for inputs (e.g. fertilizer and pesticide) which is expected to result in high yields for the safrinha (second crop) cotton and corn crops. Additionally, excellent weather throughout most of Brazil is contributing to a record yield. *(For more information, contact Nicole Wagner at 202-720-0882).*

Despite Rains, Record Corn Expected in Argentina

Argentina's corn production for 2006/07 is forecast at a record 22.00 million tons, up 2 percent from last month, and up 39 percent from last year. Harvested area is forecast at 2.85 million hectares, unchanged from last month and up 17 percent from last year. Yield is forecast at a record 7.72 tons per hectare, which is up 2 percent from last month and up 19 percent from last year. As of March 29, harvest progress was 19 percent complete, compared to 20 percent complete at this time last year. Entre Rios and Santa Fe provinces, which are 78 and 43 percent complete, lead harvest progress. Buenos Aires and Cordoba provinces, which account for the majority of corn area, are 22 and 6 percent complete, respectively. Argentina's corn was not as affected by the severe rains and flooding as soybeans since mature corn can withstand wetness better than soybeans. Furthermore, relatively more of the corn crop was harvested than the soybean crop, especially in the wetter areas of Entre Rios and Santa Fe, which led corn harvest progress. If wet conditions persist, however, susceptibility to diseases and lodging, as well as losses in quality will increase. Before the rains halted harvest activity, the average nation-wide yield was an impressive 8.8 tons per hectare on 766,000 hectares, or 28 percent of the planted area, according to the Buenos Aires Grain Exchange (BCBA). With the return of dry weather, the current forecast yield will be attainable. *(For more information, contact Nicole Wagner at 202-720-0882).*

Record Argentina Soybeans Forecast Despite Unfavorable Recent Weather

Argentina's soybean production for 2006/07 is forecast at a record 45.5 million tons, up 3 percent from last month and up 12 percent from last year. Harvested soybean area for 2006/07 is forecast at a record 15.8 million hectares, unchanged from last month and up 4 percent from last year. Yield is forecast at 2.88 tons per hectare, up 4 percent from last month and up 8 percent from last year. Approximately 300,000 hectares of soybean area was damaged due to heavy rains and flooding in Entre Rios, Santa Fe, Cordoba, and Buenos Aires during the last week of March. Most of the losses will occur in Santa Fe and Entre Rios which account for 29 and 7 percent of the total production respectively. Despite losses of approximately 0.5 to 2 million tons, a record forecast production is maintained due to optimal weather for most of the growing season, especially in Cordoba and Buenos Aires, and very high early reported yields. Soybean quality and transportation are more affected by the rains than production. As of March 29th, harvest was 11 percent complete compared to 18 percent this time last year, according to the Argentina's Secretariat of Agriculture (SAGPyA). Soybean harvest came to a halt due to the weather and it will be at least one week before fieldwork can resume. First crop soybeans have reached maturity and second crop soybeans are in pod fill. *(For more information, contact Nicole Wagner at 202-720-0882).*

South Africa's 2006/07 Corn Crop Wilts from Prolonged Dryness

South Africa's 2006/07 corn production is forecast at 6.0 million tons, down 1.0 million tons from last month and down 0.9 million from last year. Corn area is forecast at 2.8 million hectares, down 0.1 million hectares from last month but up 0.8 million or 40 percent from last year. Area was reduced from last month because poor rains and high temperatures continued through March and caused extensive crop damage throughout the western corn belt.

Crop conditions were above average at the end of December, but an El Niño-induced drought and heat wave from early January through March caused irreversible damage to the crops and lowered potential yields and grain quality. In general, the high temperatures and prolonged dryness occurred during the critical pollination and early grain-filling stages, and late-planted crops in the west (i.e., approximately 40 percent of the total crop) began to wilt from late February through March.

Crop conditions in the east are better than in the west, but yields in the east will also be well below average. Any rainfall received during April is expected to be too late to bring relief to the damaged crops. The estimated yield of 2.14 tons per hectare is well below the 5-year average yield of 3.10 tons. Seasonal rainfall accumulations during 2007 are very similar to the severe drought of 1992. *(For more information, contact Curt Reynolds at 202-690-0134.)*

Thailand Corn – Lower Area But Higher Yield Expected

Thailand's 2006/07 corn production is estimated at 3.8 million tons, down 200,000 or 5 percent from last year, due to lower estimated area for the main season crop. Total corn area is estimated at 1.0 million hectares, down 100,000 hectares or 9 percent from a year ago. The estimated yield

of 3.8 tons per hectare is up 4 percent from last year. The year-to-year increase in estimated yield is attributed to greater availability of high-yield seeds and generally favorable weather. Thailand's second crop, accounting for around 10 percent of total corn production, is expected to increase significantly this year in response to attractive farm-gate prices. *(For more information, contact Paulette Sandene at (202)-690-0133)*

Ethiopia: Record Corn and Wheat Crops Due to Favorable Weather

Ethiopia's 2006/07 corn and wheat production are estimated at a record 5.0 million and 3.7 million tons, respectively, up 20 and 27 percent from last year's bumper crop. The record crops are attributed to favorable weather and well-distributed rainfall received in the main production zones, as well as in the marginal crop areas. Other factors contributing to the bumper crops were increased planted area and improved yields from better availability of fertilizers, seeds, and credit. In addition, local grain prices have remained high over recent years, which have encouraged growers to increase investments in agricultural inputs. *(For more information, contact Curt Reynolds at 202-690-0134.)*

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Branch, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-442), April 10, 2007.

Printed copies are available from the National Technical Information Service. Download an order form at http://www.ntis.gov/products/specialty/usda/fas_a-g.asp, or call NTIS at 1-800-363-2068.

The FAS International Production Assessment Branch prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, May 11, 2007.

TABLE 18

The table below presents a 25-year record of the differences between the April projection and the final estimate. Using world wheat production as an example, changes between the April projection and the final estimate have averaged 2.1 million tons (0.4 percent) and ranged from -6.8 to 6.5 million tons. The April projection has been below the final 15 times and above the final 10 times.
