Percent Ever Infected ‡		1.6%					

¹ Number of Acute Clinical Cases Reported: For hepatitis A and hepatitis B, the number of cases reported to the National Notifiable Disease Surveillance System (NNDSS). Cases of hepatitis C/NANB are also reported to NNDSS (758 in 2004) but are unreliable for monitoring trends in hepatitis C because these reports include cases based only on a positive lab test for anti-HCV, most of which represent chronic HCV infection. (CDC. Summary of Notifiable Diseases, United States, 2002, MMWR 2003; 51(53).

² Estimated Number of Acute Clinical Cases and New Infections: Incidence estimates are derived from catalytic modeling of seroprevalence data from the Third National Health and Nutrition Examination Survey (NHANES III) applied to cases reported to the Nationally Notifiable Disease Surveillance System (NNDSS) (for hepatitis A and hepatitis B) or to the Sentinel Counties Study of Viral Hepatitis (for hepatitis C).

³ Number of Persons with Chronic Infection: HBV: Margolis HS, Coleman PJ, Brown RE, et al. Prevention of hepatitis B virus transmission by immunization: An economic analysis of current recommendations. JAMA 1995; 274(15): 1201 - 1208. HCV: Armstrong GL et al. Prevalence of hepatitis C virus infection in the United States, 1999 through 2002. Ann Int Med 2006 (in press).

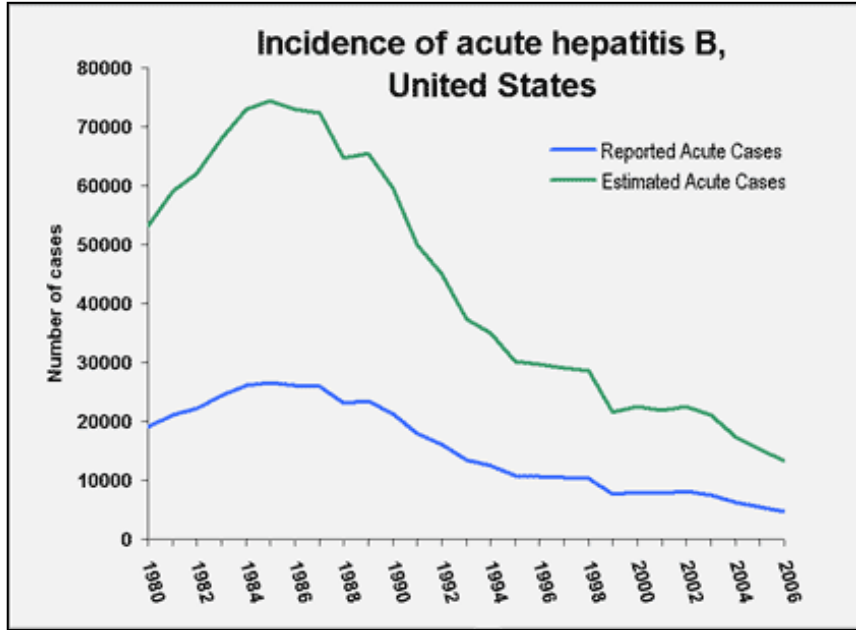

† Estimated Annual Number of Chronic Liver Disease Deaths: HBV: Margolis HS, Coleman PJ, Brown RE, et al. Prevention of hepatitis B virus transmission by immunization: An economic analysis of current recommendations. JAMA 1995; 274(15): 1201 - 1208. HCV: Centers for Disease Control and Prevention. Recommendations for the prevention and control of hepatitis C virus infection and HCV-related chronic disease. MMWR 1998; 47(RR-19):1-39.

‡ Percent Ever Infected: Seroprevalence estimates for HAV, HBV and HCV come from the National Health and Nutrition Examination Survey HAV: Bell BP, Kruszon-Moran D, Shapiro CN et al.
