WYOMING	5%	43%	34%	6%	11%
BUREAU	4%	32%	37%	13%	13%

The above percentages represents only those acres that have been inventoried (Ecological Site Inventory) to determine ecological status. Ecological Site Inventories are being conducted to fill in data gaps. This table will be updated annually to reflect new information and changes in seral stages.

¹ Expressed in degree of similarity of present vegetation to the potential natural, or climax, plant community: Potential natural community = 76-100% similarity, Late Seral = 51-75% similarity; Mid Seral = 26-50% similarity; Early Seral = 0-25% similarity.

² This category includes rangelands for which neither data nor estimates are available. This category includes rangelands for which ecological status cannot be determined (ie rock out crop, alkali flats, etc.) or an ecological site description has not been developed. It also includes rangelands that have not been inventoried using the Ecological Site Inventory.
