

June 23, 2000

Dear Colleague:

Information related to the 1999 BRFSS summary prevalence report of selected risk factors and preventive health measures from the core and modules is attached.

This report consists of four parts:

An introduction that contains:

An overview of the 1999 summary prevalence report.

An explanation of the tables for 1999 Behavioral Risk Factor Surveillance System (BRFSS) prevalence data.

Definitions of BRFSS risk factors and preventive health measures. When appropriate, Year 2000 Objectives are identified.

Analysis of selected questions from the 1999 BRFSS questionnaire. The set of analyses is divided into three sections:

Section I - selected risk factors and preventive health measures in the BRFSS core.

Section II - selected risk factors and preventive health measures from modules used by at least 13 states

Section III - preventive health measures that concern women only.

As soon as your schedule permits, please examine the enclosed materials closely.

Sincerely yours,

David E. Nelson, M.D.,M.P.H.  
Chief, Behavioral Surveillance Branch  
Division of Adult and Community Health  
National Center for Chronic Disease  
Prevention and Health Promotion

# **1999 BRFSS SUMMARY PREVALENCE REPORT**

BEHAVIORAL SURVEILLANCE BRANCH  
DIVISION OF ADULT AND COMMUNITY HEALTH  
NATIONAL CENTER FOR CHRONIC DISEASE PREVENTION  
AND HEALTH PROMOTION  
CENTERS FOR DISEASE CONTROL AND PREVENTION

## **OVERVIEW OF THE 1999 SUMMARY REPORT**

The report is divided into three sections. *Section I* displays tables for selected variables in the core. In *Section I*, there are three tables for each risk factor or preventive measure unless otherwise noted. Estimated prevalence and relevant statistics are provided for the total population sampled and by sex. Prevalence estimates for both 1998 and 1999, or where appropriate 1997 and 1999, and the percentage point difference between the estimates are given for variables in the core.

*Section II* shows tables for selected variables in modules used by at least 13 states. *Section II* contains two tables for each risk factor or preventive measure of interest in the modules. These tables show the estimated prevalence and relevant statistics for the total sampled population and both sex groups who responded to selected questions in the optional modules.

*Section III* contains tables for preventive health measures that are related to women's health issues. Estimated prevalence and relevant statistics are provided for the total population sampled. Prevalence estimates for both 1998 and 1999 and the percentage point difference between them are given.

Three tables (Tables 1.1-1.3) from Section I will be used as examples to explain the information contained in this report. Each table describes a behavioral risk factor or preventive health measure from the Behavioral Risk Factor Surveillance System (BRFSS) instrument.

Table 1.1 (page 1) shows the estimated prevalence and relevant statistics for each participant. (Participants refer to all states, and the District of Columbia and territories of the U.S.). The table shows the estimated prevalence and relevant statistics for "fair or poor health status" in the population surveyed by each BRFSS participant. This prevalence estimate excludes respondents with unknown information on self reported health status or respondents choosing not to answer the question.

The columns in Table 1.1 provide the following information:

COLUMN HEADINGCONTENTS

Participant Name of the participant. Participants refers to all states including the District of Columbia and territories of the United States.

Sample size The number of individuals who responded to the specific BRFSS question. These are unweighted numbers. These numbers exclude individuals who reported "not sure, don't know", those who refused to answer the question, or had no response coded (missing or skipped).

Percent/Mean An estimate of the percent (or prevalence or mean number) of residents who report the behavioral risk factor of interest. This is weighted to the participant's population to estimate the true prevalence or mean in the population.

Standard error A measure of the amount of variability that exists in the calculation of the prevalence estimate.

95% confidence interval A range which contains the true population prevalence estimate 95% of the time, if repeated sampling of the population is performed.

SUMMARY STATISTICS are given at the bottom of the table:

Number of participants The total number of participants who asked question(s) regarding the respective "risk factor".

Median The middle value of all estimated prevalences.

Range among all The lowest prevalence and the highest prevalence participants.

For example, in Table 1.1, there were 2092 individuals in the state of Alabama who responded to the "self reported health status" question. Of those responding, the estimated prevalence of Alabama's population who reported that they had fair or poor health status is 18.4%. This prevalence estimate has a standard error of 0.9. The 95% confidence interval for this estimate is (16.6, 20.2). Ninety-five percent (95%) of confidence intervals generated under repeated sampling will contain the true population prevalence of Alabama's population who "had fair or poor health status".

Table 1.2 (page 2) shows the estimated prevalence and relevant statistics by sex for each state participant. The same statistics are displayed in Table 1.2 as in Table 1.1, except that Table 1.2 shows the estimated prevalence of “ fair to poor health “ for males and females separately. This side by side display of the tables permits each participant to compare estimates for males and females in their respective state.

Table 1.3 (page 3) shows the percent difference between the prevalence estimates of poor health in 1998 and 1999 survey years. A negative change indicates a decrease in prevalence from 1998 to 1999, while a positive change indicates an increase in prevalence between the two years. This difference gives state health officials a quick method to examine changes that may have occurred in their respective state. Some of these changes may have resulted from legislative actions (or inactions) in the state, programs funded, or programs that came into existence because of results that states may have shown from the BRFSS. Since changes between two years may be attributable to many factors, conclusions drawn from this table should be interpreted with extreme caution.

**Sample Size.** Sample sizes vary by question. Some estimates may be based on responses from less than 50 respondents. Interpreting estimates that are based on a small number of respondents can mislead the reader into believing that a given finding is much more precise than it actually is. The BRFSS recommends not interpreting percentages where the denominator is based upon fewer than 50 unweighted respondents (sample size).

## **DEFINITIONS OF TERMS AND RISK FACTORS IN THIS REPORT**

### **AIDS KNOWLEDGE/ATTITUDES**

**HIV TEST** - Respondents, age 18-64, who have never had a test for HIV infection.

**CHANCES OF GETTING HIV** - Respondents, age 18-64, who believe that their chances of getting infected with HIV, the virus that causes AIDS are medium or high.

**TEEN CONDOM USE** - Respondents, age 18-64, who would not encourage sexually active teenagers to use a condom.

### **ASTHMA**

**CURRENTLY HAS ASTHMA** - Respondents who report they currently have asthma.

### **BREAST EXAM**

**BREAST EXAM (1)**- Female respondents, age 18 and older, who report they never had a breast exam by a doctor.

**BREAST EXAM (2)**- Female respondents, age 40 and older, who report they never had a breast exam by a doctor.

**BREAST EXAM WITHIN 2 YEARS** - Female respondents, age 50 and older, who report that they did not have a breast exam within the past two years.

### **CARDIOVASCULAR DISEASE**

**HEART ATTACK OR MYOCARDIAL INFARCTION** - Respondents who report they were told by a doctor they had a heart attack or myocardial infarction.

**STROKE** - Respondents who report they were told by a doctor they had a stroke.

### **CERVICAL CANCER**

**PAP SMEAR (1)**- Female respondents, age 18 and older who report they never had a pap smear. Year 2000 Objective 16.12. - Target  $\geq 95\%$  who have ever had a pap smear.

**PAP SMEAR, WITH UTERINE CERVIX (2)**- Female respondents, with uterine cervix, age 18 and older, who report they never had a pap smear.

**PAP SMEAR WITHIN 3 YEARS** - Female respondents, with uterine cervix, age 18 and older, who report they did not have a pap smear within the last three years.

### **CHOLESTEROL SCREENING & AWARENESS**

**CHOLESTEROL SCREENING (1)** - Respondents who never had their cholesterol checked.

**CHOLESTEROL SCREENING (2)** - Respondents who did not have their cholesterol checked within the past five years. Year 2000 Objective 15.14.- Target  $\geq 75\%$  who had their cholesterol checked within the past five years.

**CHOLESTEROL AWARENESS** - Respondents who report their cholesterol has been checked and they have been told their cholesterol is high by a health professional.

### **CLINICAL BREAST EXAM** See BREAST EXAM

### **COLORECTAL CANCER SCREENING**

**SIGMOIDOSCOPY** - Respondents, age 50 and over, who report they never had a sigmoidoscopy. Year 2000 Objective 16.13.- Target  $\geq 40\%$  age 50 and over who ever had a sigmoidoscopy.

**BLOOD STOOL TEST** - Respondents, age 50 and over, who reported they did not use a home blood stool kit in the past two years.

### **DIABETES**

**AGE AT ONSET** - Mean age when respondent was told that they have diabetes, among those who report they were told by a doctor that they have diabetes.

**DIABETES AWARENESS** - Respondents who report they were told by a doctor that they have diabetes.

**NOW TAKING INSULIN** - Respondents who are now taking insulin, among those who report they were told by a doctor that they have diabetes.

**NUMBER OF TIMES SEEN HEALTH PROFESSIONAL** - Mean number of times respondents report they have seen a doctor, nurse, or other health professional for their diabetes in the past year, among those who report they were told by a doctor that they have diabetes.

### **DRINKING STATUS**

**CURRENT DRINKERS** - Respondents who report they had alcoholic beverages in the

past month.

**BINGE DRINKING (ACUTE DRINKING)** - Respondents who report having five or more drinks on an occasion, one or more times in the past month.

**CHRONIC DRINKING** - Respondents who report drinking 60 or more alcohol beverages a month.

**DRINKING & DRIVING** - Respondents who report having driven after having too much to drink, one or more times in the past month.

## **FRUITS AND VEGETABLES**

**FRUITS AND VEGETABLES** - Respondents who report they are not consuming five or more servings of fruits and vegetables a day. Year 2000 Objective 2.6. Target  $\geq 50\%$  who are consuming five or more servings of fruits or vegetables a day.

## **HEALTH INSURANCE**

**HEALTH INSURANCE (1)**- Respondents age 18 and older who report they have no health care coverage.

**HEALTH INSURANCE (2)**- Respondents age 18-64 years who report they have no health care coverage.

## **HEALTH STATUS**

**ACTIVITIES LIMITED** - Mean number of days in past 30 days activities were limited among respondents reporting days when physical health or mental health was not good.

**MENTAL HEALTH NOT GOOD** - Mean number of days in past 30 days mental health was not good as reported by respondents.

**PHYSICAL HEALTH NOT GOOD** - Mean number of days in past 30 days physical health was not good as reported by respondents.

**SELF REPORTED HEALTH STATUS** - Respondents who report having a general health status of fair or poor.

## **HYPERTENSION**

**HYPERTENSION AWARENESS** - Respondents who report that their blood pressure has been checked and they have been told they have high blood pressure.

**HYPERTENSION SCREENING** - Respondents who report their blood pressure has not been checked within the past two years.

## **IMMUNIZATION**

**FLU SHOT** - Respondents, age 65 and older, who report they did not have a flu shot within the past 12 months. Year 2000 Objective 20.11 - Target  $\geq$  80% who had a flu shot in the past 12 months.

**PNEUMONIA VACCINATION** - Respondents, age 65 and older, who report they never had a pneumonia vaccination. Year 2000 Objective 20.11 - Target  $\geq$  80% who have had a pneumonia vaccination.

## **MAMMOGRAPHY**

**MAMMOGRAM (1)** - Female respondents age 18 and older, who report that they have never had a mammogram.

**MAMMOGRAM (2)** - Female respondents, age 40 and older, who report that they have never had a mammogram.

**MAMMOGRAM WITHIN 2 YEARS** - Female respondents, age 50 and older, who report that they did not have a mammogram within the past two years.

## **MAMMOGRAPHY AND BREAST EXAM**

**MAMMOGRAM & BREAST EXAM** - Female respondents, age 40 and older, who report that they have never had a mammogram and a breast exam.

**MAMMOGRAM & BREAST EXAM WITHIN 2 YEARS** - Female respondents, age 50 and older, who report that they did not have a mammogram and a breast exam within the last two years. Year 2000 Objective 16.11 - Target  $\geq$  60% women, age 50 and over who had a mammogram and a breast exam in the preceding 1-2 years.

## **OVERWEIGHT**

**OVERWEIGHT: BY MEDIAN** - Respondents at or above 120% of their ideal weight. Ideal weight is defined as the mid-value of a median frame person from the 1959 Metropolitan Life Insurance Corporation height-weight tables.

**OVERWEIGHT: BY BODY MASS INDEX** - Females with body mass index (BMI)  $\geq 27.3$  and males with BMI  $\geq 27.8$ . BMI is defined as weight in kilograms divided by height in meters squared ( $w/h^{**2}$ ). Year 2000 Objective 2.3 - Target  $\leq$  20% at or above

the BMI level. *This should be used with extreme caution since people tend to under report their weight. BRFSS may underestimate the prevalence of overweight.*

**PAP SMEAR** See CERVICAL CANCER

### **PHYSICAL INACTIVITY**

**NO LEISURE TIME PHYSICAL ACTIVITY** - Respondents who report no leisure-time physical activity during the past month. Year 2000 Objective 1.5 - Target  $\leq 15\%$  with no-leisure time activity.

**REGULAR AND SUSTAINED PHYSICAL ACTIVITY** - Respondents who report no physical activity defined as: 5 or more sessions per week, 30 minutes or more per session, regardless of intensity. Year 2000 Objective 1.3 - Target  $\geq 30\%$  who engage in physical activity for at least 30 minutes per day.

**REGULAR AND VIGOROUS PHYSICAL ACTIVITY** - Respondents who report no physical activity or a pair of activities defined as: 3 or more sessions per week, 20 minutes or more per session, at 50% or more capacity. Year 2000 Objective 1.4 - Target  $\geq 20\%$  who engage in physical activity 3 or more days per week for 20 or more minutes.

**SIGMOIDOSCOPY** - See Colorectal Cancer Screening

### **SMOKELESS TOBACCO**

**EVER USED** - Respondents who have ever used or tried smokeless tobacco.

**CURRENT USE** - Respondents who report that they currently use smokeless tobacco.

### **SMOKING STATUS**

**EVER SMOKED** - Respondents who have ever smoked 100 cigarettes in their lifetime.

**CURRENT SMOKER** - Respondents who have ever smoked 100 cigarettes in their lifetime and reported smoking every day or some days. Year 2000 Objective 3.4 - Target  $\leq 15\%$  who smoke cigarettes..

### **WEIGHT CONTROL**

**CALORIES AND PHYSICAL ACTIVITY** - Respondents at risk on BMI who report that they are not either eating fewer calories or less fat and not using physical activity or exercise to lose or maintain weight.

## **LIMITATIONS OF THE DATA**

This report consolidates the most current data on selected risk factors and preventive health measures for states, the District of Columbia and Puerto Rico. The information was obtained from the data files of individual states. Therefore, while all participants use telephone surveys to collect the data, the data in this report vary somewhat with respect to data collection, sampling design and sample size.

All states conduct interviews using a computer-assisted telephone interviewing (CATI) software program. All states use probability-based methods to select their sample. The BRFSS standard for sample designs is that sample records must be justifiable as a probability sample of all households with telephones in the state. All participating areas except California, and Hawaii met this criterion in 1999. For data year 1999, two states, Tennessee and Minnesota used the Mitofsky-Waksberg method of sampling. Forty-six states and the District of Columbia used a disproportionate stratified sample (DSS) design. Puerto Rico used a simple random sample design. The two remaining states—California, and Hawaii—used other designs.

### **California**

California, in 1999, used a sample design in which only phone numbers from hundred blocks with one or more listed household numbers were included in the sampling frame. Such hundred blocks are estimated to contain 97.8% of all household numbers in California. Numbers from this frame were selected with an equal probability of selection.

### **Hawaii**

Hawaii uses a sampling frame obtained from the state's telephone company. The frame purportedly contains all working prefixes in Hawaii. The frame is divided into six strata, corresponding to the major islands of Hawaii. The working prefixes are used to randomly generate telephone numbers with a probability proportional to the number of known household numbers in the hundred block to which a number belongs. Telephone numbers from hundred blocks with no known household numbers have a zero probability of being included in the sample. The percentage of telephone households excluded from the sampling frame is unknown. The numbers generated are subsequently screened by GTE Hawaii, who screens out all but the listed and unlisted household numbers in the sample.

### **Other areas**

In a few states, a portion of sample records intended for use during one month may have been completed in another month. This deviation should only affect analyses based on monthly, rather than annual, data. Illinois completed their 1999 survey in January 2000. One hundred eighteen records have a January interview date.

### **B. Other 1999 limitations of the data**

In addition to departing from the standard for sample designs, California modified the wording of mammography, breast exam and Papanicolaou (PAP) smear questions, and are therefore

excluded from those tables in the report. California also asked the HIV/AIDS section questions to persons 18-45 years of age rather than to those 18-64 years of age as specified, and are therefore not included in the tables for this topic. Illinois used a skip pattern in the HIV/AIDS section which affected the HIV testing questions and are therefore excluded from Table 27.

Although almost all states collect data monthly, the annual number of interviews range from 1267 in the District of Columbia to 7543 in Kentucky. Estimates for some states are therefore based upon smaller sample sizes, and for rare events (e.g. diabetes), may yield unstable estimates. Some items, including drinking and driving and obesity, are affected by seasonality, and estimates for these items may be biased for subpopulations.

The 1998 estimates presented for Puerto Rico in the 1999 summary report do not match the estimates presented in the 1998 Summary Prevalence Report. The original 1998 estimates were based on mixed mode (personal interview and telephone survey data). The 1999 estimates were calculated using telephone data only.

All data collection systems are subject to error, and records may be incomplete or contain inaccurate information. Respondents may not remember essential information, a question may not mean the same thing to different respondents, and some individuals may not respond at all. It is not always possible to measure the magnitude of these errors or their impact on the data. The user must make his or her own evaluation of the data. Overall estimates generally have relatively small sampling errors, but estimates for certain population subgroups may be based on small numbers and have relatively large sampling errors. When the number of events is small and the probability of such an event is small, considerable caution must be observed in interpreting the estimates and/or differences between groups and areas.

TABLE 1.1 1999 BEHAVIORAL RISK FACTOR SURVEILLANCE DATA  
 ESTIMATED PREVALENCE AND RELEVANT STATISTICS FOR SELF REPORTED HEALTH STATUS\*  
 DENOMINATOR EXCLUDES MISSING, DON'T KNOW, AND REFUSED

| PARTICIPANT    | SAMPLE SIZE | PERCENT | STANDARD ERROR | 95% CONFIDENCE INTERVAL |
