PNW GPOP OC-3

Roll forward analysis is probably too conservative

Office of Science Data Movement Requirements by 2008

Roll back analysis may be inflated

Science Areas	<u>Current End-to-End Throughput</u>	<u>5 years End-to-End Throughput</u>	<u>5-10 Years End-to-End Throughput</u>	General Remarks
High Energy Physics	0.5 Gbps	100 Gbps E2E	1.0 Tbps	high throughput
Climate Data & Computations	0.5 Gbps	160-200 Gbps	<i>n</i> Tbps	high throughput
SNS NanoScience	(under construction)	1.0 Gbps steady state	Tbps & control channels	remote control & high throughput
Fusion Energy	500MB/min (burst mode)	500MB/20sec (burst mode)	<i>n</i> Tbps	time critical transport
Astrophysics	1TB/week	N*N multicast	1TB+ & stable streams	Computational steering & collaborations
Genomics	1TB/day	100's users	Tbps & control channels	high throughput & steering

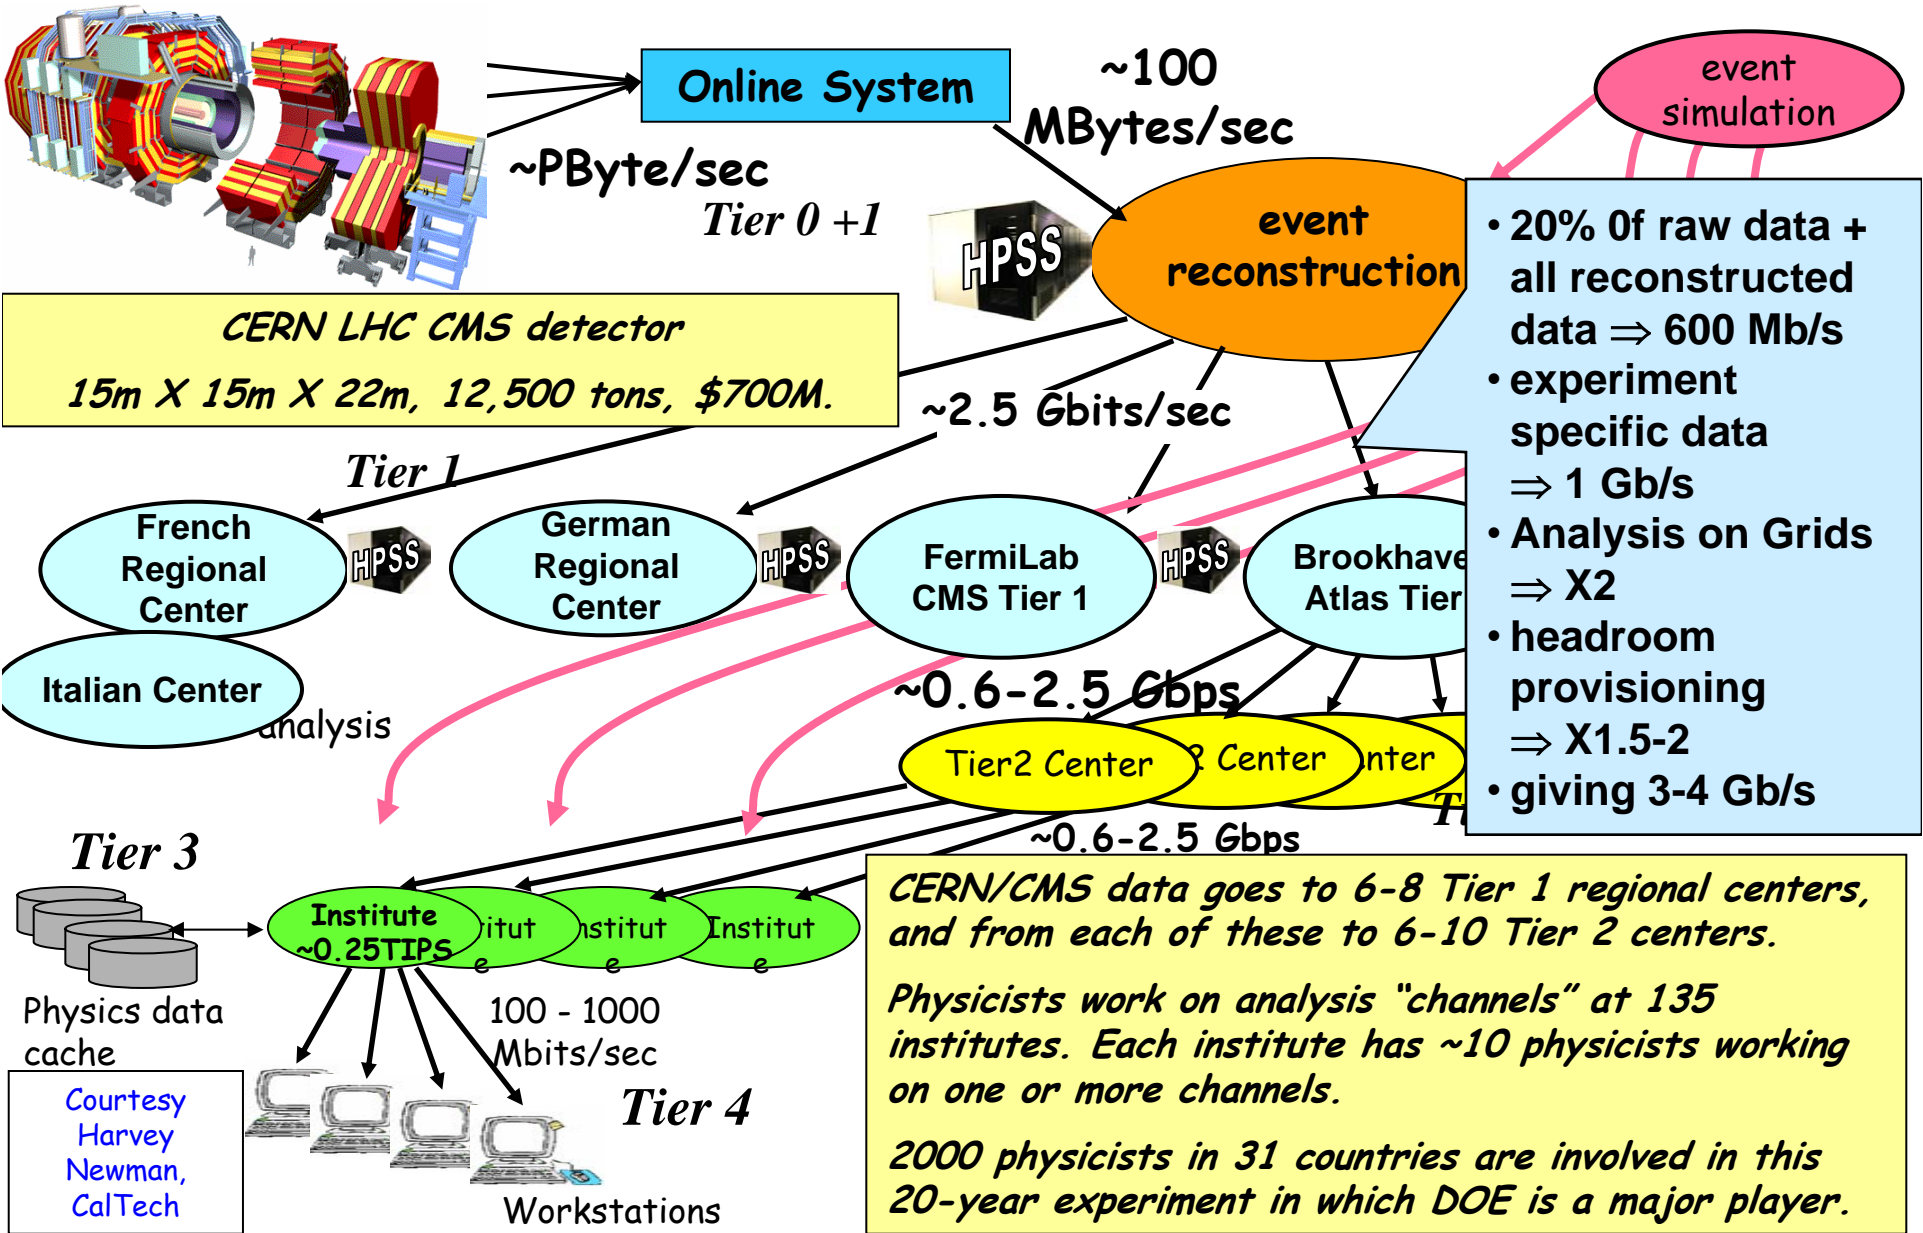

What is Happening Now?

- What will be the impact of Grids?
 - The LHC data requirements are coming into focus as LHC moves to more and more realistic simulated production runs (“data challenges”)
 - This provides some clues as to how Grids will impact the network

High Energy Physics Data Management

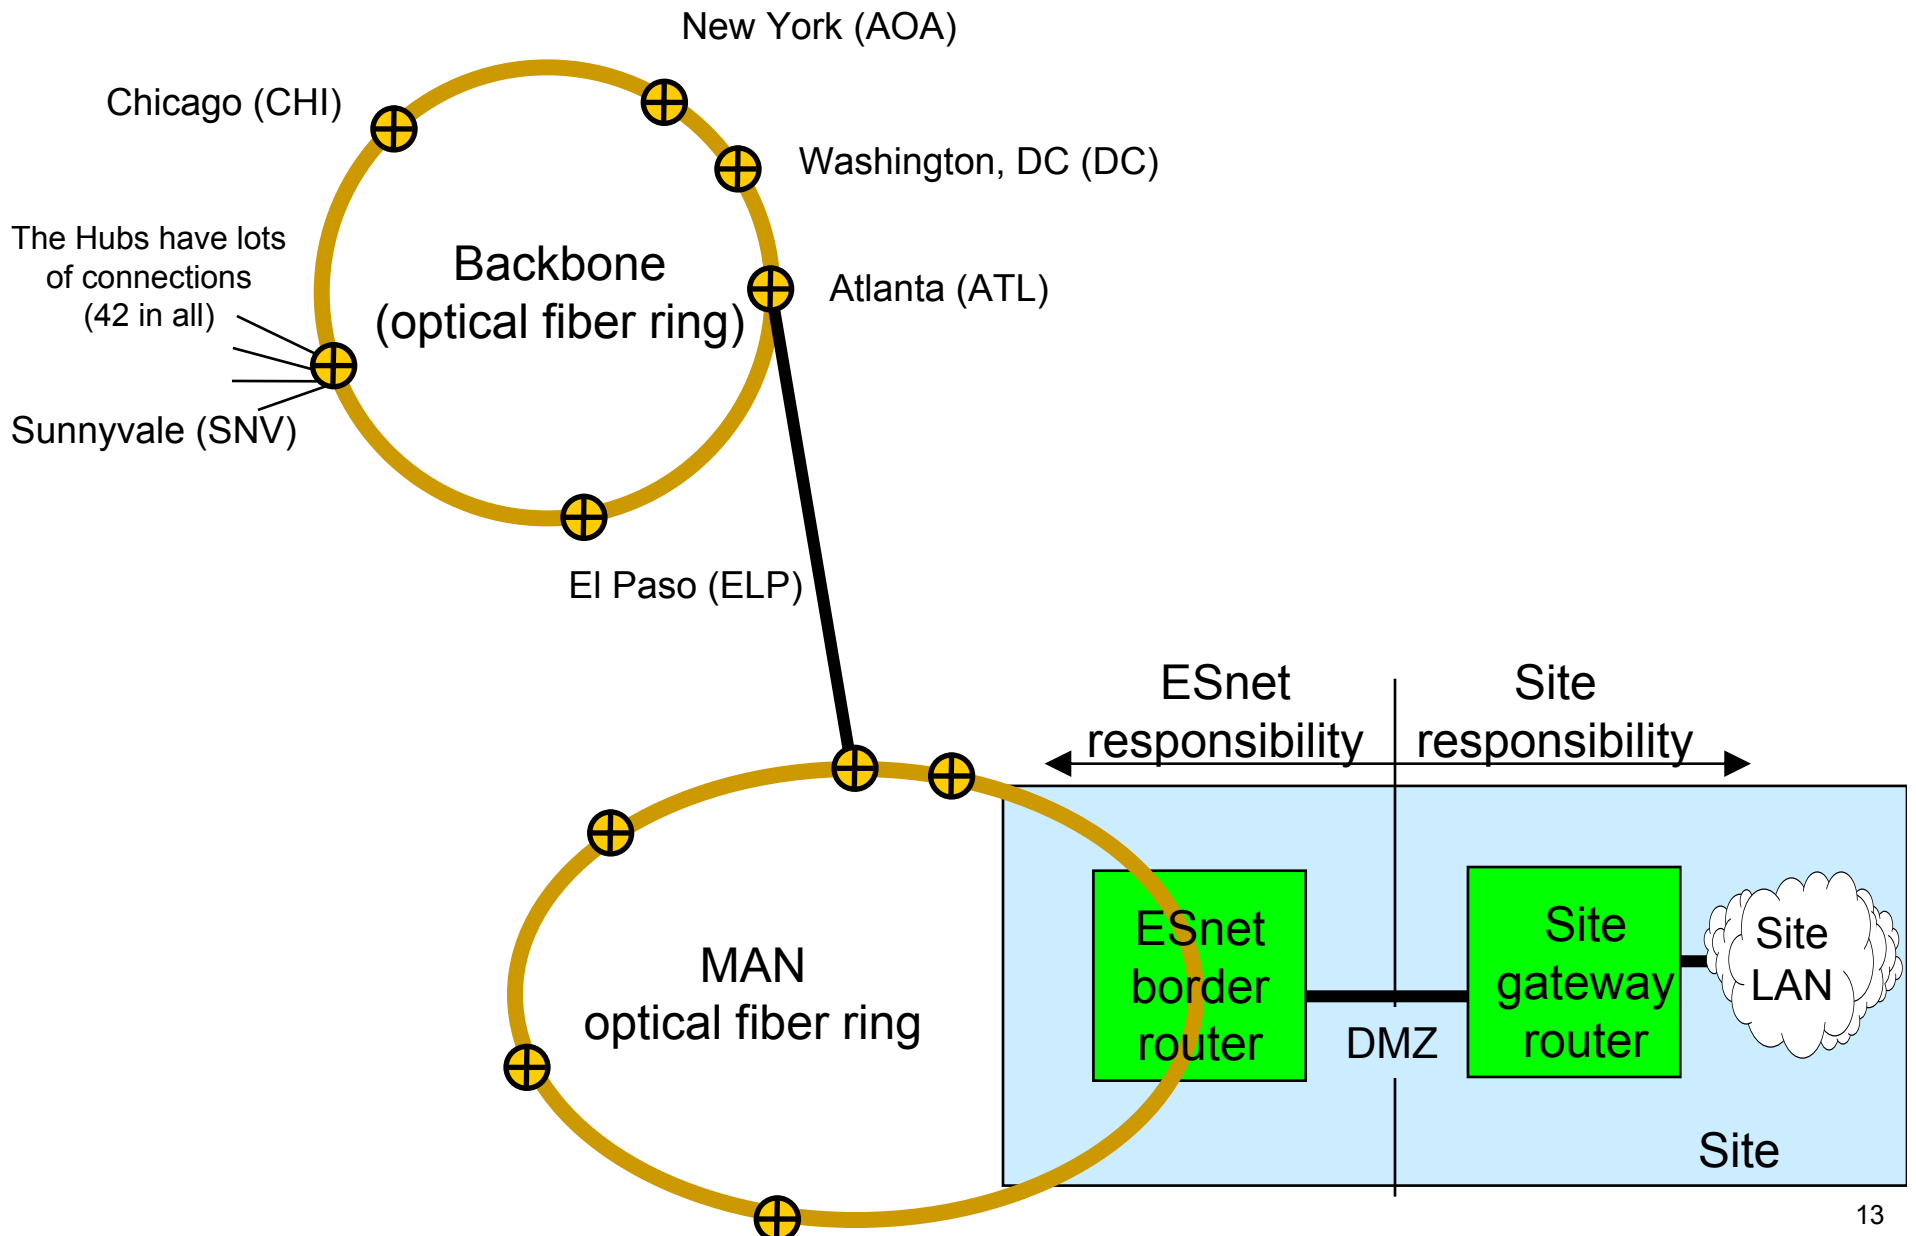

CERN / LHC Data: One of Science's most challenging data management problems

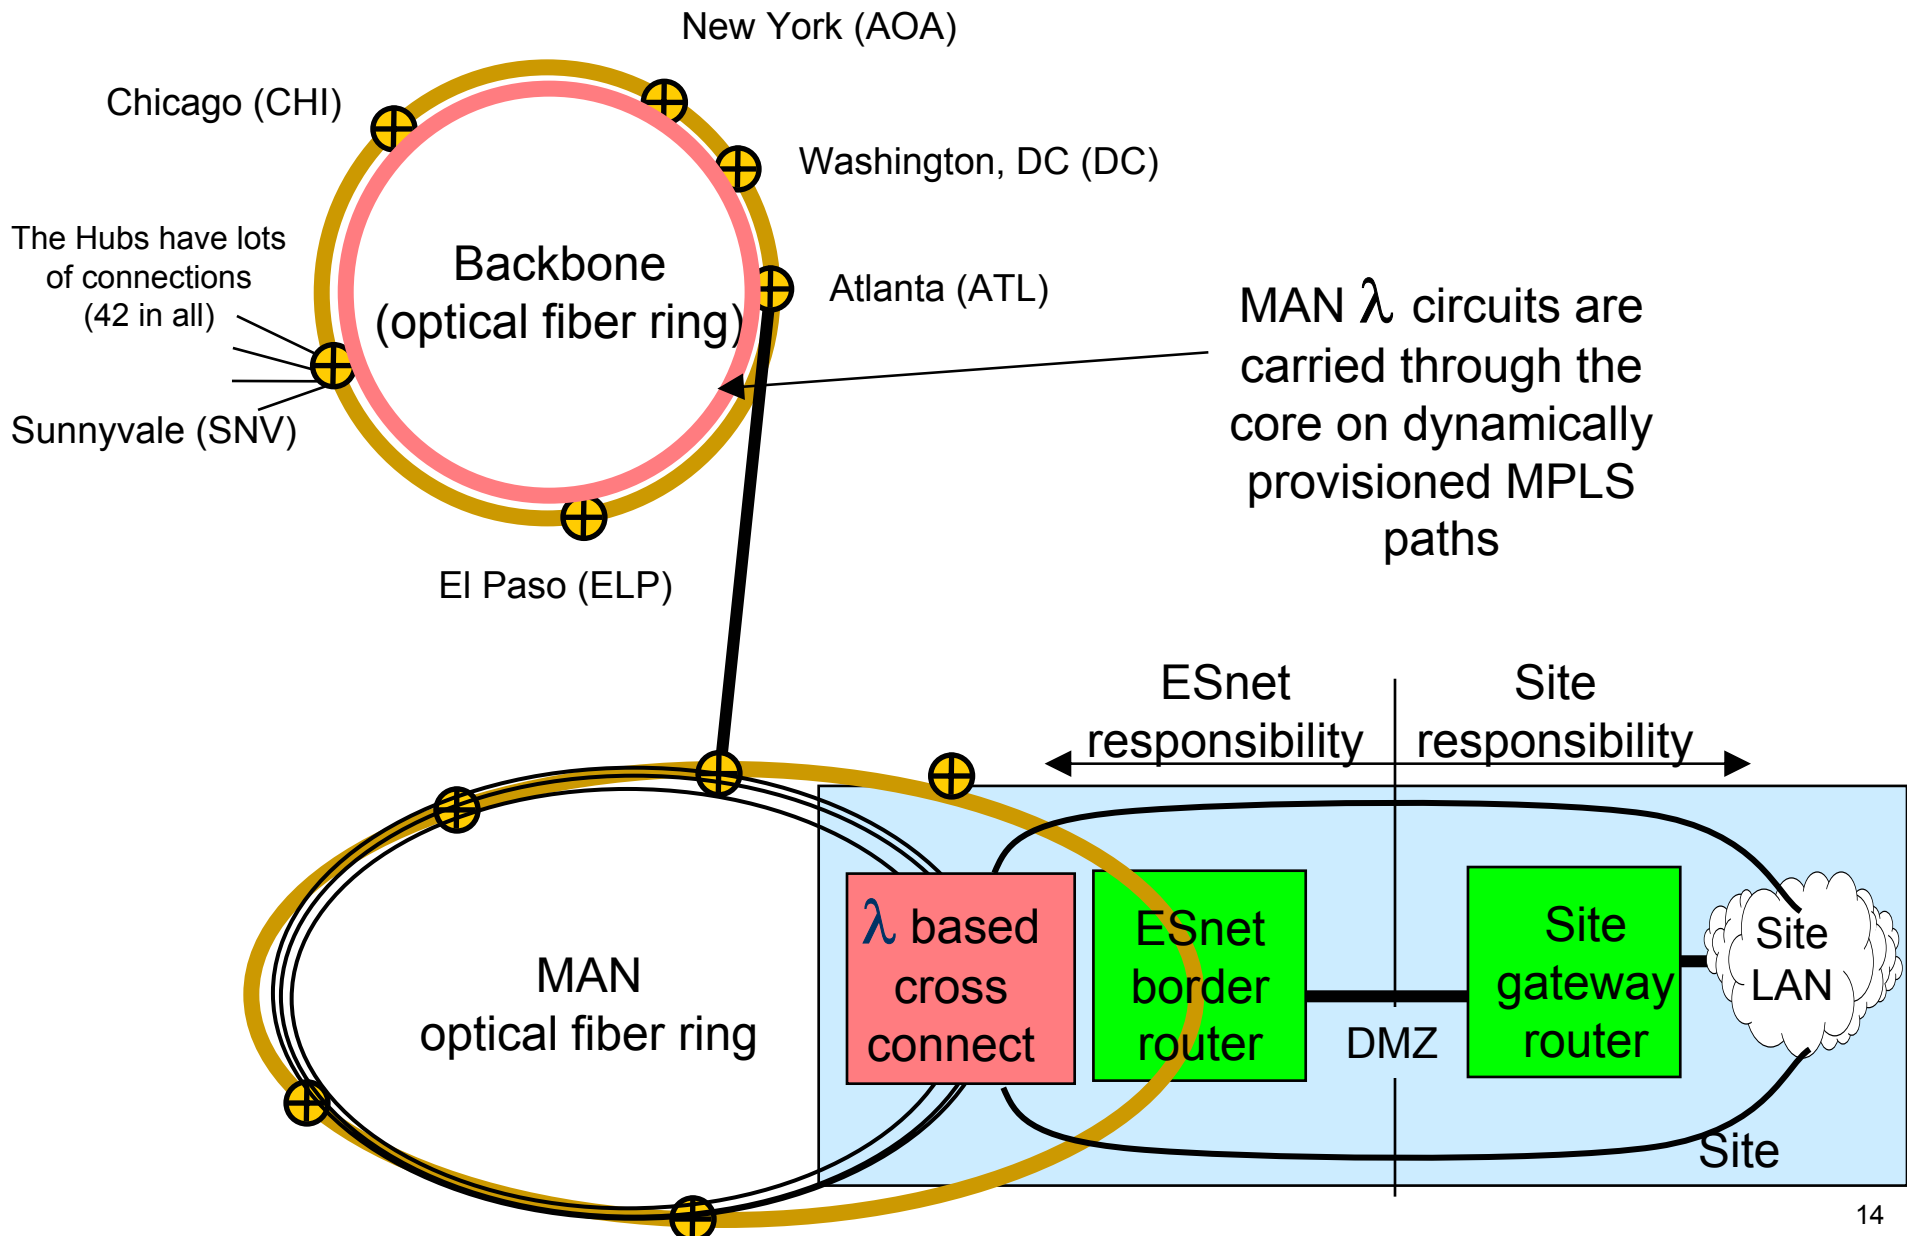

The Challenge

- The LHC (Atlas and CMS) appear to have real and near-term needs for substantial CERN →US bandwidth increases to DOE Labs
- Re-engineer the network to
 - manage the dramatic local loop bandwidth increases
 - accommodate the increases needed at the International peering points

ESnet MAN Based Architecture – Phase1

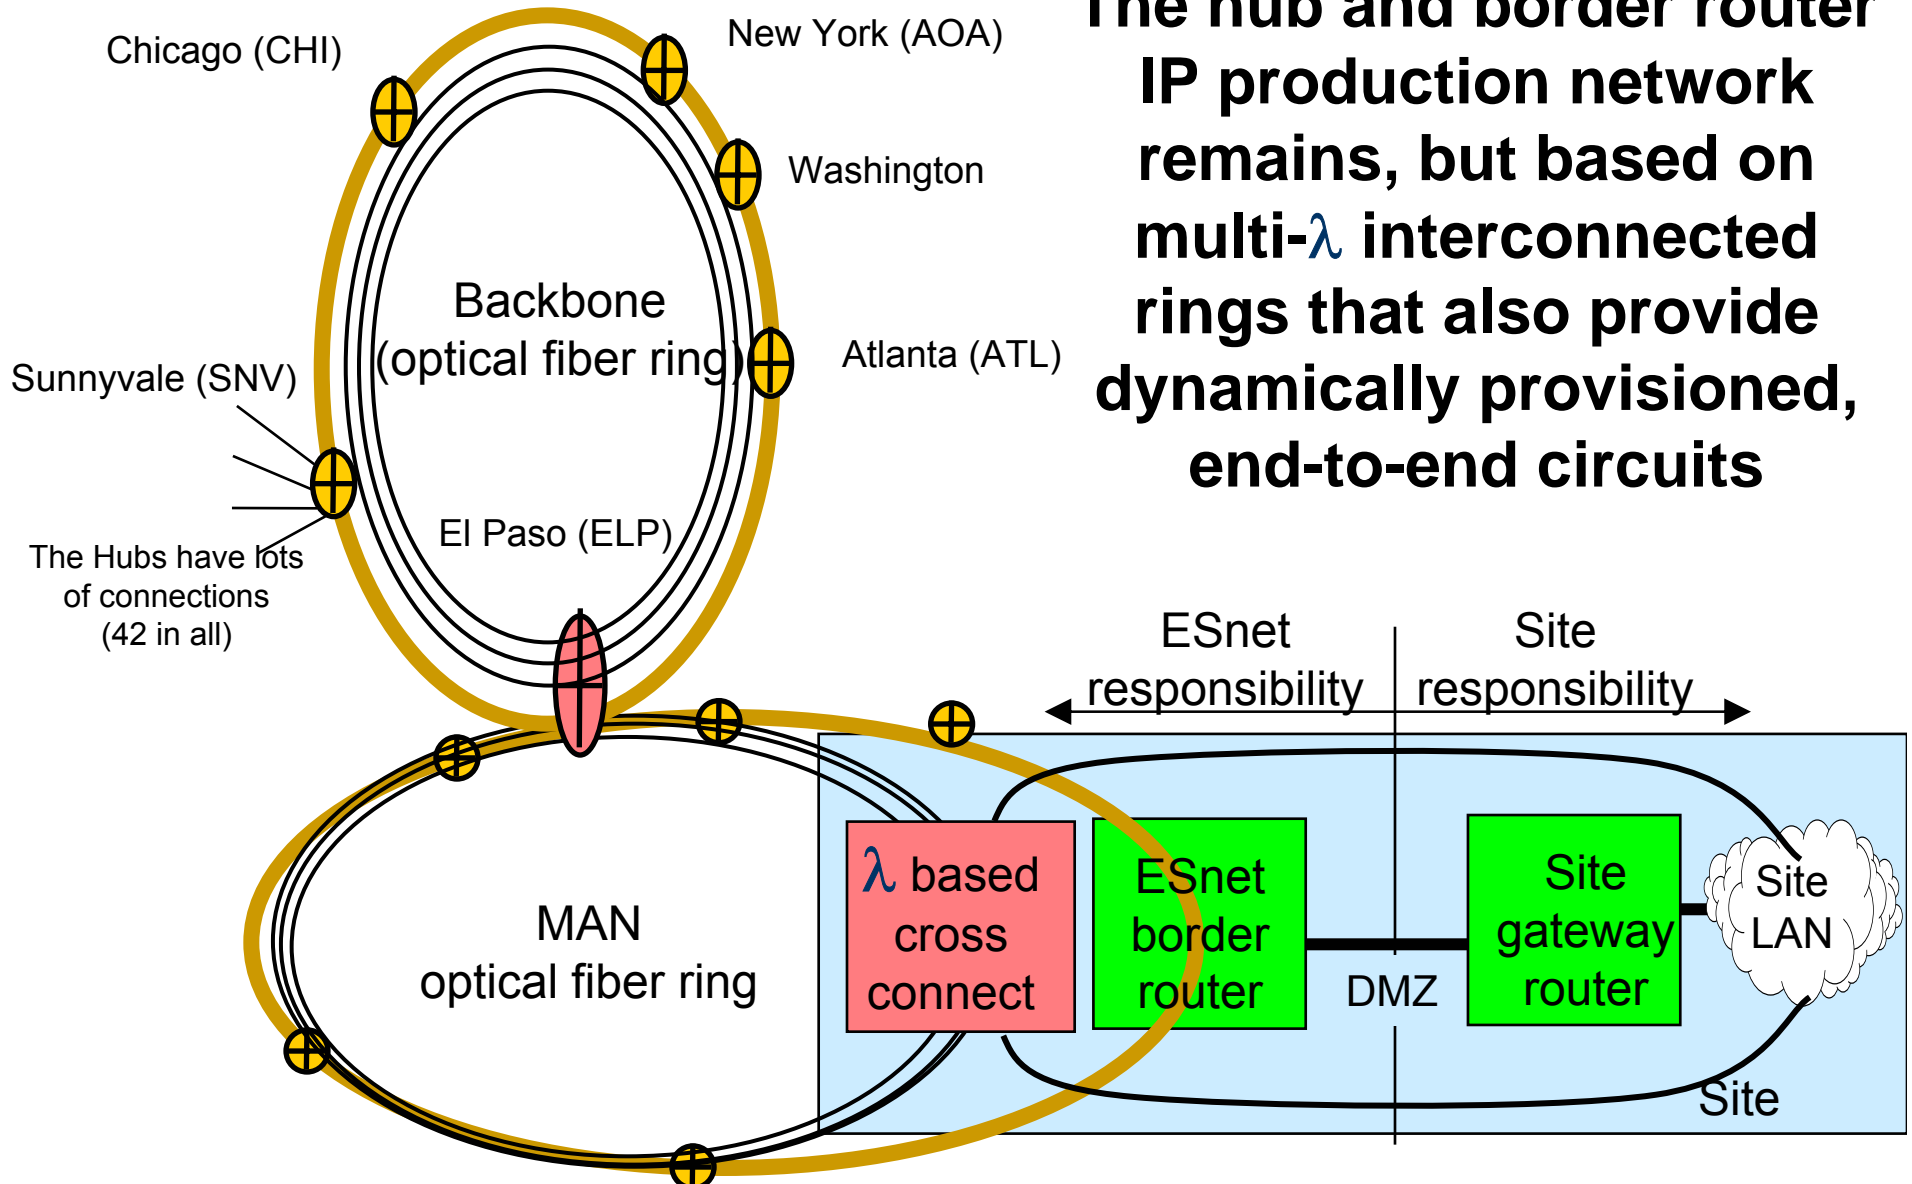

ESnet MAN Based Architecture – Phase2-3

ESnet Architecture – Future: End-to-End Optical Transparency

The hub and border router IP production network remains, but based on multi- λ interconnected rings that also provide dynamically provisioned, end-to-end circuits

International Connectivity

- Harvey Newman estimates that LHC will need 3-4 λ s to CERN to satisfy LHC. Can they afford that? Two might be available now if you can call you network and R&D project, But will that work longterm for HEP?
