1. INTRODUCTION

The 2002 National Survey on Drug Use and Health (NSDUH) was the twenty second in a series of general population surveys designed to provide annual nationwide data on substance abuse patterns and behaviors in the United States. Continuing the expanded sample design first implemented in 1999, the scope of the 2002 survey allowed for the production of data estimates for the nation and each of the 50 states and the District of Columbia. Prior to 2002, the survey was known as the National Household Survey on Drug Abuse (NHSDA).¹

The NSDUH was funded by the Substance Abuse and Mental Health Services Administration (SAMHSA), an agency of the United States Public Health Service, part of the U.S. Department of Health and Human Services. SAMHSA chose Research Triangle Institute (RTI) to conduct activities including sampling, counting and listing, screening, interviewing, data processing, and reporting. This report examines the preparations and procedures used in carrying out the data collection tasks and also presents the results of data collection.

As an overview, data collection preparatory work on the 2002 NSDUH began in March of 2001. Following a January training program for all returning veteran interviewers, data collection work began on January 7, 2002 and was completed by December 20, 2002. The field staff of approximately 720 field interviewers worked each month to complete a total of 68,126 interviews using computer-assisted interviewing (CAI). New for the 2002 survey was the use of a cash incentive. Interviewers paid each respondent \$30 in cash upon completion of the interview.

Table 1.1 provides approximate time periods for the various tasks completed.

The remainder of this report addresses the following topics relating to data collection for the 2002 NSDUH: Sampling and Counting/Listing (C/L), Data Collection Staffing, Preparation of Survey Materials, Field Staff Training, Data Collection, Data Collection Results, and Quality Control.

¹ Throughout this report, a reference made to a past NSDUH implies a past NHSDA, since the two names refer to the same annual survey.

Table 1.1
Schedule of Major Data Collection Activities

Activity	Approximate Time Frame
Recruit listing staff	March - August 2001
Conduct counting/listing and create lists of Sample Dwelling Units (SDUs)	April - November 2001
Adjust 2001 Management Staff for 2002 due to new territory alignments (replacement staff also hired throughout the year as needed)	Fall 2001
Recruit Field Interviewers for 2002 (Initial staff—replacement staff also hired throughout the year as needed)	November - December 2001
Prepare computerized screening and interviewing programs	June - October 2001
Prepare manuals and materials for trainings	May 2001 - January 2002
Conduct veteran interviewer training sessions	January 2002
Conduct new-to-project interviewer training sessions	January - September 2002
Conduct and manage screening/interviewing operations	January 7 - December 20, 2002
Conduct verification operations	January 7, 2002 - January 6, 2003

2. SAMPLING AND COUNTING/LISTING OPERATIONS

2.1 Overview of Sampling Procedures

A coordinated five-year sample design was developed for 1999 through 2003. The sample design for the 2002 main study, as a subsample of the five-year study, consisted of a deeply stratified, multi-stage, area probability design. **Exhibit 2.1** presents details of the sample design.

The coordinated 1999-2003 design calls for 50 percent overlap in first stage units (area segments) between each successive year of the five-year study following completion of the 1999 survey.

The first stage of the sample selection procedures began by geographically partitioning each state into roughly equal-sized field interviewer (FI) regions. These regions were formed as a means of stratification so that each area would yield roughly the same expected number of interviews during each data collection period. This partitioning divided the United States into 900 FI regions made up of counties or groups/parts of counties.

These FI regions were subdivided into smaller geographic areas—called segments—that served as the primary sampling units. In general, segments consisted of adjacent Census blocks and were equivalent to area segments selected at the second stage of selection in NSDUHs conducted prior to 1999. A total of 96 segments per FI region were selected (with probabilities proportional to size): 24 to field the five-year study and 72 to serve as backups in case of sample depletion or to field any supplemental studies SAMHSA may request. For the 2002 survey, a total of 7,200 segments within the 900 FI regions were selected. Of the total, 3,600 segments were overlap segments used during the 2001 survey, 3,576 segments were new, and 24 segments were duplicates of segments used in previous years. For this last category, the same area had been listed previously under a different segment identification number, so the original listing was used instead of relisting the same area.

After selecting these new areas, the process of counting and listing (C/L) the dwelling units (DUs) within each new segment ensued. Segments to be used in 2002 were listed between April and November of 2001. Once all DUs for a particular quarter were listed, the second-stage selection process identified sample dwelling units (SDUs) for inclusion in the study.

At the final stages of selection, five age group strata were sampled at different rates. These five strata were defined by the following age group classifications: 12-17, 18-25, 26-34, 35-49, and 50 years old and over. No race/ethnicity groups were purposely over-sampled for the 2002 main study. However, consistent with previous NSDUHs, the 2002 NSDUH was designed to over-sample younger age groups.

2.2 Recruiting and Training for Field Counting/Listing

Preparations for C/L field activities began with the decision to use the existing NSDUH data collection management structure to supervise counting and listing. All current Field Supervisors (FSs) were asked to handle the administrative tasks for the listers hired for their area. These tasks included completion of the initial hiring process, segment assignment, managing the timely completion of segments, and weekly approval of time and expense reports. (Exceptions occurred in a few states to allow those FSs and their field staff to concentrate solely on screening and interviewing work. In those states, traveling lister teams completed the C/L work.) For technical supervision such as how to handle a specific segment, all listers contacted the manager for Counting and Listing (C/L Manager) for answers and advice.

Beginning in March 2001, FSs recruited listing staff from their existing staff of field interviewers. Experienced listers not currently working as NSDUH interviewers were also available for hire. A total of 335 listers were hired, certified, and worked from April through November 2001, to complete counting and listing operations for the 2002 NSDUH.

All hired listers received a home study training package containing a memorandum and materials including a project C/L manual; C/L video tape; hire letter; Data Collection Agreement; 2002 NSDUH C/L Project Specification Sheet; and a certification packet which included questions about procedures as well as path-of-travel exercises. Staff had two weeks upon receipt of this package to complete the certification test and return it to RTI for evaluation. Of the 347 training packages distributed, only 12 hired listers did not pass the certification test. They received feedback about their efforts including copies of the questions missed but were not allowed to work as listers. All certified listers received their bulk listing supplies.

A select group of nine listers were chosen to serve as traveling listers. All nine of these listers had served on the traveling listing team during the previous year's C/L work. These travelers reported directly to a Traveling C/L Manager who provided administrative supervision in addition to managing their workload and assignments.

A group of RTI survey specialists attended classroom training in June to learn C/L procedures. Training included detailed instruction in proper C/L protocol and the completion of actual segments selected for the state of North Carolina.

Newly certified listers were then authorized to begin their C/L assignments. All listers sent their completed assignments directly to the Sampling Department at RTI where they were carefully edited. Feedback was provided to any listers who had significant errors. Problem segments were either refiled (for correction of major errors) or were corrected by sampling staff through discussions with the lister. In some cases, the lister returned to the segment to review the items in question.

2.3 Counting/Listing Procedures

Prior to the start of actual C/L field work, segment packets were assembled at RTI. Each packet contained maps of the selected area, listing forms, and blank segment information sheets. A copy of the maps remained at RTI for reference when assisting with problems encountered in the field.

Beginning in April, segment kits were assigned and sent to those listers who had completed the certification process and were ready to begin listing. Once the remaining staff became certified, they received an assignment as well. Listers recorded the address or description of up to 400 dwelling units (DUs) in each segment.

To reduce the time required to count and list segments, several procedures were implemented to maximize efficiency. In many cases the “count” step was eliminated: the lister could immediately list the segment unless during the initial trip around the boundaries of the segment it was apparent the segment had experienced additional construction or the lister determined that the segment was large (i.e., 400+ DUs). As had been done on prior rounds of the NSDUH, a rough count procedure was allowed for segments containing large geographic land areas, large DU counts (400+ DUs), or significant growth in residential DUs (typically, 1,000+ DUs). This procedure permitted listers to obtain an approximate count of residential DUs in these segments from secondary sources—such as the post office, fire department, or county or city planning office—without having to conduct an exact count.

If a lister came across a segment that needed subsegmenting, the lister called in the initial DU counts to RTI’s Sampling Department, who could sometimes subsegment it over the telephone (any segment with more than 400 DUs generally required subsegmenting). In cases involving traveling listers, the telephone subsegmenting process allowed the lister to—in one trip—count and list a segment with 400 or more DUs, rather than experiencing a delay of one or two weeks and necessitating a second trip to the segment. For difficult subsegmenting tasks, the segment materials were sent to RTI to be handled directly by sampling personnel. Of the 3,576 new segments listed for the 2002 survey, 429 required subsegmenting. When obvious and possible, sampling staff completed any needed subsegmenting prior to the assignment of the segment to the lister, although the majority of subsegmenting occurred during the listing process.

The counting and listing of almost all of the segments was completed by the end of November 2001 (the exceptions involved a few access problems or late segments that had to be returned to the field for re-listing). Once the segments were listed and the completed segment kits were received at RTI, an editing process of the completed materials checked for and deleted any DUs located outside segment boundaries, ensured that listing sheets matched segment sketches/maps, and verified that proper listing order and related listing rules were observed.

During this editing process, the sampling staff also checked all subsegmenting that occurred in the field to ensure it was done correctly.

Listed DUs were keyed into a computer control system. A selection algorithm selected the specific sample dwelling units (SDUs) to be contacted for the study. Prior to the beginning of the appropriate quarter, FSs assigned segments (or partial segments) to their interviewing staff. Interviewers received all assigned SDUs on their Newton handheld computer. Each selected unit and the next listed unit (for use as a sample check to capture missed dwelling units during screening and interviewing) were also printed on Selected DU Lists. These lists, along with copies of the handwritten listing forms and maps, were distributed to the assigned field staff before the start of each quarter.

2.4 Added Dwelling Units

During the screening process, Field Interviewers (FIs) were trained to identify any unlisted DUs that existed within the SDU or within the interval between the SDU and the next listed DU. If the missed DUs were housing units, they were automatically entered into the Newton (up to established limits) and selected for participation. At most, the FI could independently add five missed DUs per SDU and a maximum of ten missed DUs per segment. If the FI discovered more than these amounts or if the missed DUs were group quarters units, the FI called the FS. The FS then either called RTI's Sampling Department for further instructions or instructed the FI to call the Sampling Department directly, depending on the situation.

While no upper-limit was placed on the total number of DUs that could be added to a segment by RTI's Sampling Department, the FIs were instructed to notify RTI of any significant listing problems. In a small number of segments, portions of these segments had to be re-listed during the screening and interviewing phase. **Table 2.2** indicates the number of segments that experienced added DUs, as well as the total number of added DUs for the 2002 NSDUH.

2.5 Problems Encountered

2.5.1 Controlled Access

In many of the major urban areas, field staff had some difficulties gaining access to locked buildings, and listers in particular had some trouble listing very large public housing complexes. Access in some suburban areas proved problematic as well; more and more planned communities have intercoms, guarded gatehouses or entryways outfitted with cameras and scrambled buzzer systems. Access to military bases, college dormitories, and large retirement communities also proved problematic at times. Based on experience, these types of access problems were expected. Special mechanisms or protocols were in place to handle them promptly and in some cases avoid them entirely.

Access problems were typically resolved through effective follow-up efforts of supervisory staff, including situation-specific letters of request and in-person visits by the Field and/or Regional Supervisors. In particularly difficult situations, SAMHSA offered additional support via special refusal conversion letters or telephone follow-ups by the Project Officer.

2.5.1.1 Military Bases

As in past years, the often problematic access to military bases was handled with a formal and standardized approach for 2002. Through joint RTI/SAMHSA efforts, a contact person within the Pentagon for each branch of the service was identified. These individuals were advised in advance of base selections for the year. They then notified the base commanders regarding RTI's need to access these bases for both listing and screening/interviewing work. Additionally, standard letters and informational packages were sent by RTI staff to help obtain access to all selected bases. These efforts were effective: access to all selected bases was secured.

2.5.1.2 Colleges and Universities

Access to colleges and universities is sometimes problematic. RTI used several standard approaches to accommodate the concerns of school administrators. Having standardized letters available that addressed reoccurring issues with a variety of attachment options was very effective.

Most schools requested or required only a letter stating the sponsor and the purpose of the study, and identifying the lister or data collection staff. However, some schools wanted more complete information and the right to approve the field data collection procedures and personnel working in and around their campuses. Most of these situations resulted in packages being sent that contained:

1. RTI IRB information;
2. OMB approval information;
3. descriptive information about the procedures and data collection plan; and
4. various descriptive study materials used with respondents during data collection.

Included with all letters and packets was an endorsement letter signed by the presidents of Duke University and the University of North Carolina at Chapel Hill. In the end, all of the private educational institutions expressing concerns cooperated in the counting and listing phase of the 2002 NSDUH.

2.5.2 Segments with Reassigned Quarters

Nine segments were identified during the counting and listing phase as difficult to access during months with unusual weather. Including 18 overlap segments from the 2001 study, there were a total of 27 segments in 2002 with access issues. Most involved roads made impassable by snow during the winter months. Others involved roads inaccessible due to rain, and one or two isolated locations involved water-only access that often froze during the winter months. If segments with weather or geographic access problems were selected for a quarter in which the access would be a problem (generally Quarters 1 or 4), the segment was switched with a segment in the same region for an appropriately paired time period. For example, inaccessible first quarter segments were switched with second quarter segments in the same region that would be more accessible during the first quarter; fourth quarter segments were switched with more easily accessed third quarter segments. Generally the “switched” segment was selected because it had more accessible road surfaces, was more urban, or had fewer inaccessible roads.

In a few locations, such as some areas in Alaska, there were no segments that were better for reassignment during the problematic time period. When that happened, staff made prompt assignments, emphasized early completion of the work, and tried to plan around good weather forecasts to accomplish the field work as early in the period as possible.

Exhibit 2.1

2002 NSDUH Sample Design Summary

First Stage of Selection for the Main Study: Segments

The 2002 design provided for estimates by state in all 50 states and the District of Columbia. States should therefore be viewed as the “first level” of stratification as well as a reporting variable. Eight states, labeled the “big” states in **Table 2.1**, had a sample designed to yield 3,600 respondents per state. The remaining 43 “small” states¹ had a sample designed to yield 900 respondents per state.

The larger sample sizes obtained at the state level, along with small area estimation techniques refined under previous NSDUH contracts, enabled the development of estimates for all states, for several demographic subgroups within each state (i.e., age group and race/ethnicity group), and for some Metropolitan Statistical Areas and a few small areas in the “big” states.

The “second level” of stratification defined contiguous geographic areas within each state and also corresponded in size to the annual assignment for a single field interviewer (FI). These FI regions were of approximately equal population size in terms of allocated sample.

Additional implicit stratification was achieved by sorting the first-stage sampling units by an MSA/SES (Metropolitan Statistical Area/socioeconomic status) indicator² and by percentage of non-Hispanic white. The first stage sample units for the 2002 NSDUH were selected from this well-ordered sample frame.

For the first stage of sampling for the 2002 NSDUH, each of the FI regions was partitioned into noncompact clusters of dwelling units by aggregating adjacent Census blocks. Consistent with the terminology used in previous NSDUH studies, these geographic clusters of blocks were referred to as *segments*. On average, segments were formed so that they contained at least 175 dwelling units and were constructed using 1990 Decennial Census data supplemented with revised population counts obtained from outside sources. A sample *dwelling unit* in the NSDUH refers to either a housing unit or a group quarters listing unit (such as a dormitory room or a shelter bed).

A sample of segments was selected within each FI region, with probabilities proportionate to a composite size measure and with minimum replacement. Segments were formed so that they contained sufficient numbers of dwelling units to support three annual NSDUH samples. This allowed half of the segments used in any given year’s main sample to be used again in the following year as a means of improving the precision of measures of annual change. This also allows for any special supplemental sample or field test that SAMHSA may wish to conduct in any given NSDUH year within the same segments.

¹For reporting and stratification purposes, the District of Columbia is treated the same as a state and no distinction is made in the discussion.

²The four categories are defined as: (1) MSA/low SES, (2) MSA/high SES, (3) NonMSA/low SES, and (4) NonMSA/high SES.

Exhibit 2.1 (Continued)

In order to coordinate the sample selection for 1999 through 2003, 96 segments were selected within each FI region. An equal probability subsample of eight segments was used for the 2002 NSDUH. These eight segments were randomly assigned to quarters and to two waves within each quarter. The waves used in the 2002 NSDUH were designated as Waves 4 and 5. Wave 4 segments were used for the 2001 and 2002 surveys. New dwelling units (i.e. those not previously selected for the 2001 study) were selected from the Wave 4 segments for 2002. Wave 5 segments were new for 2002 and will be used again for the 2003 survey.

Data from roughly one-fourth of the final sample of respondents was collected during each calendar quarter. This important design feature helped control any seasonal bias that might otherwise exist in drug use prevalence estimates and other important NSDUH outcome measures of interest.

Second Stage of Selection for the Main Study: Listed Lines

Before any sample selection within selected segments began, specially-trained staff listed all dwelling units and potential dwelling units within each newly selected area segment. A dwelling unit is either a housing unit for a single household or one of the eligible noninstitutional group quarters that are part of the defined target population. The listings were based primarily on observation of the area segment and could include vacant dwelling units and units that appeared to be dwelling units but were actually used for nonresidential purposes. The objective of the listing was to attain as complete a listing as possible of eligible residential addresses; any false positives for residences were eliminated during the household screening process after the sample was selected.

The sampling frame for the second stage of sample selection was the lines of listed dwelling units and potential dwelling units. After accounting for eligibility, nonresponse, and the third-stage sample selection procedures (including a response rate adjustment for the effect of the \$30 incentive), it was determined that 182,250 lines were needed to obtain a sample of 67,500 responding persons distributed by state and age-group. During the study's implementation, however, a total of 178,013 lines were selected and yielded a final respondent sample of 68,126 (as shown in **Table 2.1**). These lines were selected among lines not used in the 2001 survey (overlap segments) and the complete list of dwelling units (new segments).

As in previous years, if an interviewer encountered any new dwelling unit in a segment or found a dwelling unit missed during the counting and listing activities, the new/missed dwellings were selected into the NSDUH using a half-open interval selection technique.³ That selection technique eliminated any frame bias that might have been introduced because of errors and/or omissions in counting and listing activities and also eliminated any bias that might have been associated with using "old" segment listings.

³ In summary, this technique states that if a dwelling unit is selected for the NSDUH and an interviewer observes any new or missed dwelling units between the selected dwelling unit and the dwelling unit appearing immediately after the selection on the counting and listing map page, then all new/missed dwellings between the selection and the next one listed will be selected. If a large number of new/missed dwelling units are encountered (generally greater than ten) then a sample of the missing dwelling units will be selected.

Exhibit 2.1 (Continued)

Third Stage of Selection for the Main Study: Persons

After dwelling units were selected within each segment, an interviewer visited each selected dwelling unit to obtain a roster of all persons aged 12 and over residing in the dwelling unit. This roster information was then used to select zero, one, or two persons for the survey. Sampling rates were pre-set by age group and state. Roster information was entered directly into the electronic screening instrument (the Newton) which automatically implemented this third stage of selection based on the state and age group sampling parameters.

Using an electronic screening instrument also provided the ability to impose a more complicated person-level selection algorithm at the third stage of selection. As a result of this unique design feature, *any* two survey-eligible people within a dwelling unit had some chance of being selected—i.e., all survey eligible pairs of people had some non-zero chance of being selected. This design feature is of interest to NSDUH researchers because it allows analysts to examine how the drug use propensity of one individual in a family relates to that of other family members residing in the same dwelling unit (e.g., the relationship of drug use between a parent and child). In 2002, a parameter was added to the person selection process that increased the number of selected pairs within dwelling units without unduly diminishing response rates.

As illustrated in **Table 2.1**, at the third stage of selection, 80,581 people were selected from 136,349 screened and eligible dwelling units. A total of 68,126 completed interviews were obtained from these 80,581 selected persons.

Expected Precision of NSDUH Estimates

The multi-stage, stratified NSDUH design has been optimally constructed to achieve specified precision for various person subpopulations of interest. These SAMHSA-specified, precision requirements call for the expected relative standard error on a prevalence of 10% not to exceed the amounts listed below.

For the **main study**:

- 3.00% for total population statistics;
- 5.00% for statistics in four age group domains: 12-17, 18-25, 26-34, 35 and over;
- 11.00% for statistics computed among Hispanics in four age group domains: 12-17, 18-25, 26-34, 35 and over;
- 11.00% for statistics computed among non-Hispanic blacks in four age group domains: 12-17, 18-25, 26-34, 35 and over; and
- 5.00% for statistics computed among non-Hispanic, non-blacks in four age group domains: 12-17, 18-25, 26-34, 35 and over.

To achieve these precision requirements and meet state sample-size requirements, the optimal person-level sample distribution by strata was determined that minimized data collection costs while simultaneously meeting the above-specified precision requirements for several critical NSDUH outcome measures.

The precision constraints in the design optimization models were set up using local area predictions of drug use from a project involving small area estimation techniques to generate local area estimates from 1991-1993 NSDUH data. Drug use estimates across strata were appropriately scaled to reflect the generic 10% prevalence.

Table 2.1
Sampling Summary of 2002 Main Study NSDUH

Statistic	Small States	Big States	Total
Total Sample			
FI Regions	516	384	900
Segments	4,128	3,072	7,200
Selected Lines	102,255	75,758	178,013
Eligible Dwelling Units	85,793	64,369	150,162
Completed Screening interviews	78,748	57,601	136,349
Selected Persons	45,534	35,047	80,581
Completed Interviews	38,828	29,298	68,126
Average Per State			
FI Regions	12	48	
Segments	96	384	
Selected Lines	2,378	9,470	
Completed Interviews	903	3,662	
Interviews Per Segment	9.41	9.54	
Average Per State And Quarter			
Segments Per FI Region	2	2	
Interviews Per FI Region	18.81	19.07	
Interviews Per Segment	9.41	9.54	
Total States	43	8	51
Total Interviewers (approximate number that varied by quarter)	516	384	900

Note:

"Small" states refers to states where the design yielded 903 respondents on average. "Big" states refers to states where the design yielded 3,662 respondents on average.

Table 2.2
Segments with Added Dwelling Units
2002 NSDUH

Number of Added DUs per Segment (X)	Number of Segments with X Added DUs	Cumulative Number of Added DUs*
1	499	499
2	172	843
3	76	1071
4	43	1,243
5	26	1,373
6	13	1,451
7	9	1,514
8	10	1,594
9	5	1,639
10	6	1,699
11	1	1,710
12	1	1,722
13	1	1,735
14	1	1,749
17	1	1,766

*Total number of added DUs = 1,766

3. DATA COLLECTION STAFFING

The magnitude of the NSDUH required a field data collection management structure robust enough to support the interviewing staff and flexible enough to manage an ever-changing variety of issues. The basic management structure remained unchanged from prior surveys: Field Supervisors managed states and substate regions and reported to Regional Supervisors who then reported to Regional Directors who reported directly to the National Field Director. This chapter discusses the process of staffing the 2002 NSDUH data collection effort.

3.1 Regional Directors

Regional Directors (RDs) managed data collection within defined territories of the nation. Reporting directly to the National Field Director, the RDs, working with the Project Director and the National Field Director, served as the management team for all data collection operations.

The nation was divided among 4 RDs for data collection for 2002. All RDs were survey managers with many years of experience at RTI and on NSDUH. Initially, staff for all RD positions for the 2002 NSDUH had served as RDs during previous surveys. During the course of the year, two of these RD positions changed hands. When one RD retired in Quarter 2, the NSDUH Operations Manager, who had served as a Regional Supervisor in prior years, filled the position. In Quarter 3 when another RD left the project, an experienced and highly successful Regional Supervisor was promoted to RD.

Each of the RDs managed a staff of Regional Supervisors (RSs), who in turn managed a staff of three to six Field Supervisors (FSs) who managed the team of Field Interviewers (FIs) in their individual states or assigned areas. There also were several “Super” FSs to assist or substitute for FSs around the country as needed. These “Super” FSs reported directly to one of the RDs. Each RD also managed a small staff of survey specialists at RTI who assisted the RD in a variety of functions, including monitoring various reports and measures of production and quality, and maintaining spreadsheets to monitor costs. In addition, each RD worked with one of two Traveling Field Interviewer (TFI) Managers who coordinated the work of TFIs within the RD’s region.

RDs also had project-wide ancillary functions not specific to their region. These included coordinating Counting and Listing activities and TFI Manager work. The survey specialists assigned to the RDs assisted in these functional areas as well.

Exhibit 3.1 displays the RD regions and management task assignments at the end of the 2002 NSDUH. Listed under each RD is the structure containing the number of Regional Supervisors and Field Supervisors, geographic regions, and the ancillary management functions.

3.2 Regional Supervisors

Regional Supervisors (RSs) were the direct managers of three to six Field Supervisors. Reporting to an RD, RSs were responsible for all data collection activities in the state or states in their region. Each of the eight large states was supervised by a single RS. The 43 smaller states, including the District of Columbia, were clustered geographically to be managed by the RSs. Of the 12 RS positions on the supervisory team at the beginning of Quarter 1, all had served as RSs during the 2001 survey. Only one RS staffing change occurred during 2002. During Quarter 3 when one RS became a Regional Director, an experienced RTI survey specialist who had been filling an FS position was promoted to RS. See **Exhibit 3.1** for the final groupings of states managed by each RS.

3.3 Field Supervisors

Field Supervisors were the first-level supervisors of the interviewers conducting the data collection in each of the states. The FSs assigned work, monitored progress, resolved problems, and managed the day-to-day activities of the interviewers. Each FS reported directly to an RS. A “Super” FS (SFS) was available in each region to substitute during vacations of primary FSs and to help with FI recruiting, problem resolution, and mentoring of new FIs.

At the beginning of 2002 there were 55 FS positions with 4 of those FSs also serving as SFSs. During the year as staff left the FS position, replacement FSs were hired from the “bullpen.” Only two new FSs were hired during the year. At the end of 2002, there remained 55 FSs and 4 SFSs (see **Exhibit 3.1**).

In order to maintain a “bullpen,” Field Supervisor candidates were identified from individuals referred by current NSDUH staff and from the group of FSs currently working on other RTI survey projects.

Each recommended candidate was screened for interest and basic qualifications for the position. Candidates who successfully completed this initial screening were interviewed and evaluated by two or more of the RSs. A subset of the RSs conducted all of the interviews and reference checks using standardized materials. The interview summary and the reference checks were forwarded to the RDs for review. Based on the RD evaluations, candidates were either placed in the “bullpen” or told that they would not be considered further.

As openings occurred during the year, the RD and RS for the region reviewed the candidates in the “bullpen” and identified one or more candidates for an additional personal interview. After review and approval by the National Field Director, an offer was made to the candidate whom the RD and supervising RS felt would best match their staffing needs.

3.4 Field Interviewers and Traveling Field Interviewers

One of the primary FS functions was the continuous recruiting and hiring of the FI staff needed to complete the data collection work each quarter. FSs used multiple recruiting approaches to identify candidates, including:

- identifying interviewers who worked on previous NSDUH surveys;
- reviewing the National Interviewer File that lists interviewers who have worked for RTI at any time during the past 10 years;
- networking;
- placing newspaper advertisements and posting informative job flyers;
- contacting job service agencies; and
- using Internet job advertising and search services.

Networking involved any or all of the following contacts:

- other Field Supervisors;
- RTI staff working on other surveys with potential FIs available;
- other survey research organizations; and
- other Field Interviews (current NSDUH FIs recommending successful candidates received a recruiting bonus).

A competitive hourly wage was offered to attract a large pool of candidates. Those with general interviewing experience, and especially those with experience working on government surveys, were given preference in hiring. However, candidates with transferable skills and experience—such as contact with the public, attention to detail, and organizational skills—were considered.

The work of an interviewer requires a wide range of skills and abilities. Some of the characteristics/qualities FSs tried to identify in potential hires included:

- intelligence;
- dependability;
- sensitivity/objectivity;
- voice quality;
- reading ability;
- listening skills;
- motivation;
- availability; and
- flexibility.

It was essential that staff hired to serve as interviewers understood and were committed to the standards of confidentiality and excellence required by the NSDUH. To help ensure this, all individuals hired to serve as FIs were required to read and sign a Data Collection Agreement (see

Exhibit 3.2). Failure to comply with the provisions of this agreement would have resulted in termination from the NSDUH.

FI candidates who were unknown to the FS were interviewed by the FS using behavior based questions which required the candidates to provide examples about how they had handled specific situations in the past. For example, an FS might say “Tell me about the last time you were in a situation where you had to approach a stranger to extract some sort of information. How did you do it?” Also during the interview, the FS fully explained the requirements and responsibilities of the NSDUH interviewer’s job, described the project expectations, and defined the required time commitment. The FS then probed the candidate’s job and interviewing history. At the conclusion of the interview, if the FS still considered the person a viable FI candidate, the FS conducted reference checks. If the reference checks were satisfactory, the FS then recommended the candidate for hire. Criminal background and driving history checks were then completed before the candidate attended a training session.

FSs attempted to hire bilingual interviewers who spoke Spanish fluently in those sample areas with large populations of Hispanics. Before an FS hired a bilingual candidate, each applicant was screened by a bilingual staff member to assess the applicant’s Spanish-language abilities. The assessment involved reading and speaking in Spanish. The bilingual candidate had to meet these assessment requirements satisfactorily before he/she could be hired and trained as an RTI-Certified bilingual interviewer.

Another subset of specialized interviewers was the Traveling Field Interviewers (TFIs). Each RD region had access to a team of TFIs with proven interviewing experience. These TFIs were hired at an out-of-pattern pay rate to recognize their experience and proficiency levels and to compensate for potential periods of low hours. Each TFI was asked to commit to at least two 12-day trips each quarter. TFI teams were used to fill the unmet needs in areas with staffing shortfalls or where special needs arose (such as covering long-term illnesses in the staff). In addition, several TFIs were certified bilingual interviewers and were assigned to areas where no bilingual interviewer was available.

Exhibit 3.3 displays a flow chart that presents all of the steps in the FI recruiting and hiring process.

During the entire data collection period, a total of 940 FIs completed training and worked on the study. The following are demographic characteristics of the interviewing staff:

- Of the total 940 FIs, 743 (79.0%) were veteran interviewers who had worked on the 2001 NSDUH, while 197 (21.0%) were newly hired and trained during 2002.
- Of the total 940 FIs, 150 (16.0%) were Black or African-American and 55 (5.9%) identified themselves as “Other” (including Asian, American Indian, Pacific Islander, etc); 92 (9.8%) were bilingual in Spanish.

Table 3.1 provides a distribution of interviewers by race and gender for the veteran interviewers; **Table 3.2** for the interviewers hired and trained during 2002; and **Table 3.3** for the total. **Table 3.4** provides a distribution of veteran interviewers by bilingual skill and gender; **Table 3.5** for the newly trained staff; and **Table 3.6** for the total.

3.5 Problems Encountered

3.5.1 Continued Staffing Shortfall in Certain Areas

In certain areas, the number of staff working continued to be less than the targeted number of interviewers needed. This targeted number was based on:

- the allocation of the sample across the FI Regions each quarter;
- the number of hours that an average FI would work each week, based on recent experience;
- the average length of time to complete each screening;
- the average length of time to complete each interview; and
- the number of weeks that the interviewing staff would work in the quarter based on recent experience.

As each quarter's sample was provided by the statisticians, the process to estimate the number of needed interviewers was repeated. The assumptions were refined based on the most recent experience, including the cash incentive's effect on the flow of work. Staff needed from quarter to quarter varied, so FSs had to review staff assignments throughout the quarter and continually recruit and hire additional staff.

While most areas were close to the targeted number, some areas struggled. To compensate for these problem areas, TFIs were used to perform the work. Supervisors also borrowed FIs from other areas to complete the work. These borrowed interviewers had completed their initial assignment and were willing to travel and take on additional work.

3.5.2 Attrition

The attrition rate among the interviewing staff was 27.8%, a decrease from the rate of 31.4% in 2001. Although fewer FIs left the project, the continuing attrition meant FSs had to continually recruit new staff and juggle assignments to ensure that all of the assigned work was completed appropriately. There were significant costs associated with continuous recruiting efforts. These included not only the time of the FSs and the RTI office staff, but the costs of placing additional newspaper ads, preparing and shipping recruiting material, traveling to conduct interviews with candidates, and eventually training the newly hired staff. Additional costs were also incurred when TFIs had to be sent to work in areas where no interviewer was available.

Table 3.1
Distribution of 2002 Veteran Interviewers – By Race and Gender

Race	Male	Percent Male	Female	Percent Female	Total	Percent of Total
Black	21	12.9%	86	14.8%	107	14.4%
White	133	81.6%	461	79.5%	594	79.9%

Data Collection Agreement

<p style="text-align: center;">HEADWAY CORPORATE STAFFING SERVICES</p> <p style="text-align: center;">DATA COLLECTION AGREEMENT</p>	<p>Project Name: <u> National Survey on Drug Use and Health </u></p> <p>Project No.: <u> 7190 </u></p>
<p>I, _____, an employee of Headway Corporate Staffing Services, agree to provide field data collection services for the benefit of RTI in connection with the RTI Project shown above. Further, I</p> <ul style="list-style-type: none">a) am aware that the research being conducted by RTI is being performed under contractual arrangement with the Substance Abuse and Mental Health Services Administration;b) hereby accept all duties and responsibilities of performing specified data collection tasks and will do so personally in accordance with the training and guidelines provided to me. At no time will I engage the services of another person for the purpose of performing any data collection tasks for me without the prior written approval of RTI;c) agree to treat as confidential all information secured during interviews or obtained in any project-related way during the period I am providing services to RTI;d) agree to treat as confidential and proprietary to RTI any and all survey instruments, materials, and documentation provided or accessed during the course of my service on this project;e) am aware that the survey instruments completed form the basis from which all the analysis will be drawn, and therefore, agree that all work for which I submit invoices will be of high quality and performed in compliance with all project specifications;f) agree to use and care for any computer equipment issued to me for use on this project in a responsible manner and will return all equipment at the conclusion of the project or at the request of my supervisor;g) fully agree to conduct myself at all times in a manner that will obtain the respect and confidence of all individuals from whom data will be collected and I will not betray this confidence by divulging information obtained to anyone other than authorized representatives of RTI; andh) understand that my obligations under this agreement will survive the termination of any assignment with RTI and/or my employment by Headway Corporate Staffing Services. <p style="text-align: center;">_____ Employee's Signature</p> <p style="text-align: center;">_____ Date</p>

4. PREPARATION OF SURVEY MATERIALS

RTI and SAMHSA staff preparing survey materials for the 2002 NSDUH re-examined and updated both the CAI interview program and the Newton electronic screening program as well as all other manuals and interview materials. With veteran interviewer and new interviewer training sessions, the preparation for training required meticulous planning.

4.1 Electronic Screening

The Newton screening program for the 2001 NSDUH served as the basis for the 2002 program. All rostering questions, which gather the demographic data used for estimation and respondent selection, remained the same as in 2001. Several items from the 2001 version were modified slightly for the 2002 version:

- The Informed Consent statement (which was read aloud as the FI provided the detailed Study Description) was modified to add a statement about any selected respondents receiving a cash incentive upon completion of the interview.
- The Missed DUs question, which asks screening respondents about other living quarters within the structure or on the property, was revised. In addition, for 2002 this question was only asked at regular housing units such as single family homes, townhouses, trailers, and duplexes, but not at apartment or condominium buildings where asking about other units within the structure caused confusion. (Interviewers could add a missed unit discovered at an apartment/condo building, such as a unit within a unit, in the rare instance that such a case was found.)
- The two follow-up questions which check the accuracy of the roster at the conclusion of the screening were revised. An optional probe about students living away at school was added to the first question. The second question was revised to help clarify to the screening respondent that the list should include all persons living *in this household* for most of the time during the months of the quarter.

Several other administrative changes were made to the Newton including changing the study name as needed, and correcting a problem to allow for ZIP codes beginning with zero.

4.2 Questionnaire Development

4.2.1 CAI Instrument

Using the 2001 computer program, the following changes were made to prepare the 2002 CAI instrument:

- Added a confirmation of date of birth prior to the confirmation of age, due to the critical importance of this information;
- Reversed the order of the last two racial demographic options to ‘Other Asian group’ followed by ‘Other racial group’;

- Added consistency resolution questions to all core drug modules for recent new users, if the age at first use conflicted with the month/year of first use;
- Added questions to get the month and year a respondent first started smoking every day for new daily smokers;
- Created a new estimation variable in the alcohol module based on the upper level when a range of days is provided—this prevents the triggering of inconsistencies in the binge drinking questions when the lower level of the range was used;
- Added two recency questions about heroin use if a respondent indicated heroin use in the heroin module but did not initially indicate how it was used in the special drugs module—probes then collect both recency and how it was used;
- Corrected the CAI logic so that all users of needles receive the needle use behavior questions;
- Added two questions asking why respondents did not make an effort to get needed treatment/additional treatment;
- Added inconsistency resolution questions at the end of the arrest and booking question series;
- Added refusal follow-up probes for several of the questions about mental health treatment and follow-up questions to specify other reasons for not getting needed mental health treatment;
- Revised the response categories for cost of inpatient mental health care;
- Added questions about youth tobacco access;
- Added edit checks within the household roster to check the respondent’s age and the accuracy of reported relationships/ages;
- Altered the wording on a school related question to reflect the vacation status of students, if appropriate;
- Added end-of-interview and FI debriefing questions for the cash incentive process;
- Revised the answer choices in an FI debriefing question to eliminate ‘restaurant’ as an appropriate location for an interview; and
- Added FI debriefing questions related to Pillcard and headphone use.

Several other minor changes were made to improve the instrument, such as including a question in the respondent practice session to enter ‘all-that-apply’ type responses, revising the range limits on certain questions (such as increasing the number of days/nights to 366 to accommodate leap year), and updating the state-specific program names displayed within certain questions.

Corresponding audio WAV files were recorded for all new items within the ACASI portion of the interview. Materials used during the actual interview, including the Reference Date Calendar, the Pill Cards, and the Showcard Booklet, were also updated.

4.2.2 Spanish Translations

Using the 2001 Spanish CAI instrument, the above changes were translated and incorporated. Additional Spanish audio WAV files were recorded as well to allow respondents to listen to the ACASI sections in Spanish if necessary.

4.3 Manuals/Miscellaneous Materials Development

4.3.1 Manuals

Based upon the 2001 manuals, updated versions of the below manuals were prepared. These new versions provided all staff, both experienced and new, with accurate, detailed manuals for both training and reference.

- Field Interviewer Manual: All field staff (from interviewers to the National Field Director) received a Field Interviewer Manual detailing all aspects of an interviewer's work requirements on the 2002 NSDUH. This manual was sent to all veteran and new FIs for reading prior to the start of classroom training, was utilized throughout the training sessions, and served as a ready reference when questions arose during field work throughout the year.
- Field Interviewer Computer Manual: This companion FI manual provided details about hardware use and care issues for both the Newton and the Gateway laptop computer, instructions for using the programs on each computer, transmission steps, and a troubleshooting guide to assist staff encountering technical difficulties. This computer manual was included with—but bound separately from—the FI Manual, so FIs could easily include it in their computer carrying case as a quick reference while working.
- Field Supervisor Manual: This detailed manual for FSs included instructions and tips for recruiting field staff and managing the Counting and Listing effort and Screening and Interviewing work. Strategies for managing staff using information on the Web-based Case Management System (CMS) were also presented, as were administrative issues for both the FSs and their staff. Copies of the FS Manual were also provided to RS and RD staff.
- Field Supervisor Computer Manual: Explanations of the equipment provided for FSs (computer, printer, fax, and speakerphone) were included in this separate volume, as were instructions on using the various software tools (Windows/MS Word/MS Excel, e-mail, Fed-Ex tracking). Detailed instructions on how to use the Web-based CMS were provided for instruction and reference.
- Regional Supervisor Manual: This manual provided specific guidelines for RSs on supervising the FSs in their region and on reporting requirements to the Regional Directors. Separate chapters provided instructions for managing the various stages of NSDUH, including FI Recruitment, Counting and Listing (C/L), and Screening and Interviewing. RDs also received a copy of this manual.

- Counting and Listing Manual: The NSDUH Counting and Listing Manual included explanations and examples of the detailed C/L procedures. All listers and management staff working on that phase of the NSDUH received copies of the manual.
- Data Quality Coordinator and Consistency Check Manuals: These manuals documented the processes to be followed by the Data Quality Team in the verification process and in resolving consistency check problems.

These manuals, developed in earlier years, remained available to all staff and were given to any new staff:

- Guide to Controlled Access Situations: This manual, given to all management staff, documented the various ways to try to gain admittance in challenging access situations.
- NSDUH Guide Book: This guidebook for project management and headquarters staff provided details about issues such as chain-of-command, use of the project network drive, and whom to include on various e-mails.

4.3.2 Miscellaneous Materials

With the survey name change and the implementation of the cash incentive in 2002, the following materials were revised from the 2001 versions:

- Lead Letter to all SDUs
- Study Description
- Question and Answer Brochure
- Refusal Conversion and Unable to Contact letters.

Based on the 2001 versions, the following materials were updated:

- NSDUH Highlights
- Newspaper Articles
- Who Uses the Data?
- Certificate of Participation.

The following materials remained virtually unchanged from 2001 for use in 2002:

- RTI Fact Sheet
- “Sorry I Missed You” cards
- Appointment cards.

One new item developed for use in 2002 was referred to as the Spanish Card. For non-bilingual interviewers encountering a Spanish speaking household, this card, written in Spanish, requested an English speaking respondent. If no one was available, the reverse of the card explained that an interviewer who could speak Spanish would return and then asked the person to record a good time to visit.

4.4 Preparation for New-to-Project Interviewer Training

This section reviews the main steps necessary to prepare for New-to-Project interviewer trainings.

4.4.1 Home Study Package

Prior to training, each new FI hired for screening/interviewing work was sent a home study package containing:

- A 2002 Field Interviewer Manual
- A 2002 Field Interviewer Computer Manual
- A cover memorandum from the National Field Director
- Home study exercises.

Trainees were instructed to:

- read both manuals; and
- complete the home study exercises.

Completed exercises were to be brought to training. Exercises were collected at registration, graded, and returned to the appropriate training team. Any trainee scoring less than 84% was asked to redo the incorrect portions. **Appendix A** contains the New-to-Project home study memorandum, while **Appendix B** contains the home study exercises.

4.4.2 New-to-Project Training Supplies

Using a master list of needed supplies, all supplies were prepared, ordered (if necessary), and stored in preparation for training activities throughout the survey year.

4.4.2.1 Printed Materials Related to Training

While using computers for data collection greatly reduced the production of printed materials, many paper forms were still necessary, particularly for training. A detailed, near-verbatim guide was prepared for each member of the team of trainers. Along with the training guide, numerous printed materials were developed:

- Data Collection Agreements for all trainees to signify they agreed to follow procedures and maintain confidentiality.
- A Training Workbook that contained necessary exercises, printed examples, screening scripts, and additional instructions.
- A Training Segment packet with example listing and locating materials for the practice segment used in training.
- Mock Scripts separately bound for two different paired mocks and including the screening mocks for the case.
- Verification Forms specifically for the various training cases, printed in padded form.

- Reference Date Calendars and Incentive Receipt Forms for use during the practice interviews.
- Showcard Booklets and Pillcards for training and use during subsequent field work.
- Supplies to be used during the course of training, including the Lead Letter, the Study Description, and various tools used during obtaining participation, such as the RTI Fact Sheet, Newspaper Articles handout, Certificate of Participation, Question and Answer brochure, Who Uses the Data handout, Sorry I Missed You cards, NSDUH Highlights, and “Preliminary Estimates.”
- Certification Materials used during the certification process at the conclusion of training.

4.4.2.2 Training Videotapes

Using videotapes during training provides controlled, standardized, visual presentations of the various tasks assigned to S/I interviewers. This videotape contained multiple segments for use throughout the course of new FI training. Portions of the videotape originally developed for New-to-Project FI training in 1999 were used again in 2002, including transmission details and administrative tasks. The important screening and interviewing portions were re-filmed for 2002 to reflect the name change and incentive procedures. During training, trainees also viewed the video “Your Important Role” which is used for controlled access situations.

4.4.3 New-to-Project Bilingual Training

Interviewers who were RTI-Certified as bilingual interviewers attended an additional day of classroom training. A detailed, near-verbatim guide with group exercises was prepared for the bilingual trainers.

4.5 Preparation for Veteran Interviewer Training

Special training sessions for all veteran interviewers were held the first week of January 2002. Having worked in 2001, these experienced interviewers gathered to review important data collection topics, learn about changes for 2002 and practice with the newly loaded 2002 computer programs. This section reviews the main steps necessary to prepare for this special veteran training.

4.5.1 Veteran Home Study Package

Prior to training, all veteran interviewers continuing for 2002 received a home study package containing:

- A 2002 Field Interviewer Manual
- A 2002 Field Interviewer Computer Manual
- A cover memorandum from the National Field Director.

In order to prepare for training, veteran FIs were instructed to:

- review both manuals; and
- complete the electronic home study exercise on their laptop.

To receive the home study exercise, FIs transmitted after a specified date and the exercise was automatically loaded on their laptop. FIs then had about one week to complete the exercise and transmit the finished work back to RTI where it was scored electronically and the results posted on the CMS. Any FI not achieving a score of 80% on this open book test was contacted by RTI staff for a telephone re-test. Failure to pass the telephone re-test meant dismissal from the project. Of the 765 FIs completing the home study, 98.6 % passed the first attempt. Eleven FIs were required to complete a phone re-test, with only 1 of them not passing and being terminated. **Appendix C** contains the Veteran home study memorandum, while **Appendix D** contains the home study exercises.

4.5.2 Veteran Interviewer Training Supplies

Using a master list of needed supplies, all supplies were prepared, ordered (if necessary), and stored in preparation for training activities.

4.5.2.1 Printed Materials Related to Training

A detailed, near-verbatim Veteran Training Guide was prepared for each member of the training team. Based in part on the guide developed for 2001, most sections of the guide were newly developed to present different topics and emphasize the changes for 2002. Along with the training guide, numerous printed materials were developed:

- Data Collection Agreements for all veterans to signify they agreed to continue to follow procedures and maintain confidentiality.
- A Veteran Training Workbook that contained necessary exercises, printed examples, scripts, and additional instructions.
- Verification Forms specifically for the training cases, printed in padded form.
- Reference Date Calendars and Incentive Payment Receipts for use during the practice interview.
- Showcard Booklets and Pillcards for training and use during subsequent field work.

- Supplies to be used during training such as Incentive Advance Agreements and maps for the workshop on segment materials.
- Certification Materials used during the required certification process.

4.5.2.2 Training Videotape

A new videotape was developed specifically for one of the Veteran FI training exercises. To encourage FIs to think about the observation process, the video contained several screening and interviewing segments. While viewing each segment, FIs were to make notes about various positives and negatives of the video interviewer's performance.

4.6 Preparation for Field Data Collection

To prepare for data collection a master list of needed supplies was developed. Using this list, all supplies were developed, ordered (if necessary), and stored for use in data collection activities throughout the survey year.

4.6.1 Assignment Materials

Veteran interviewers were given assignment materials as each new quarter approached. These materials included a packet of Segment Materials (including the various maps and listing sheets for a segment) and a packet of lead letters. Letters were prepared and sent by the FIs prior to the time they would be working a particular area. Before beginning a new quarter's work, interviewers also transmitted from their Newton to receive their new assignments.

Trainees performing well after the first days of New-to-Project training were given assignment materials for the cases assigned to them. The assignment materials consisted only of the Segment Materials packet. Usually, the FS mailed the lead letters so that the trainee could begin work immediately upon the successful completion of training. Interviewers also had to transmit at the end of training to pick up their assigned cases on their Newtons. Trainees struggling during training were placed on probation and received no assignment until they adequately completed further training with their FS. Any unassigned or partial segment packets were sent to the FSs for later assignment.

4.6.2 Bulk Supplies

Bulk supplies were packed at RTI and shipped via Federal Express directly to the homes of veteran staff and those staff completing training successfully. During the year, additional needed supplies were requested by FSs using a re-supply ordering process on the management Website. Requested items were sent from the Field Distribution Center directly to the FIs needing supplies.

4.7 Website Development

Using the power of the Internet to enhance communication, RTI staff continued to refine and enhance the two NSDUH Websites.

4.7.1 Project Case Management System (CMS)

The up-to-date Web-based CMS enhanced the ability of all levels of management to make informed decisions based on current field conditions. Each night, data were transmitted to RTI from the interviewers' Newtons and Gateway laptops for inclusion in the CMS. The next morning, each supervisor and manager had access to the results of the previous day's work and its effect on the totals for that quarter.

Besides case work reports, the Website also contained many helpful tools, such as logs to enter new recruits, links to other pertinent sites, project calendars, and other administrative tools.

Access to this secure Website was tightly controlled with system wide security provided through secure links to the network from each user's computer. Additionally, several levels of passwords were required to enter the system. Supervisors had access limited to the information needed to manage their areas (e.g., an FS could only see data about his/her staff, while an RS viewed details about all cases and staff in his/her region).

4.7.2 NSDUH Respondent Website

For computer savvy respondents, an informative public NSDUH Website was maintained. Visitors to the site could access a variety of topics such as project description, confidentiality, and frequently asked questions. Brief information was included about both SAMHSA and RTI, with links to the Websites of both organizations. Also included was a listing of various users of NSDUH data which included links to those users' Websites.

4.8 Maintaining NSDUH Equipment

Staff used an extensive inventory system to monitor the disbursement and location of all NSDUH equipment, including interviewer Newtons and Gateway laptops; management laptops, printers, and faxes; training projectors and VCRs; and the many miscellaneous parts and cords. Technical assistance to the users of the equipment was an important and necessary task.

All issued equipment received annual routine maintenance during the January veteran training sessions (for interviewing staff) or during management meetings (for management staff).

If staff left the project, equipment was returned to Technical Support for check-in and maintenance. Detailed procedures were in place to recover any equipment not readily returned by former staff.

4.9 Problems Encountered

Development of all NSDUH materials and the computer programs for the electronic instruments requires a tight schedule in order to complete all preparations on time. For 2002, the implementation of the incentive process, the name change, the modified Newton sampling algorithm as well as all other changes combined for a busy preparation season. Approvals for some of these changes were received after established deadlines, leaving very little time for implementation. Any last minute change leaves very little time to thoroughly test the entire computer program, thus increasing the likelihood of error. In addition, changes also ripple through respondent materials, manuals and drafted training materials.

With dedicated and experienced staff, all preparations were completed so that data collection began as scheduled.

5. FIELD STAFF TRAINING

Training for all levels of project field staff occurred both prior to the start of data collection and throughout the year. Having experienced staff allowed training programs to go beyond the basic steps and focus on enhancing and improving necessary project skills.

5.1 Management Training Programs

Two management training programs occurred to share information and better equip all Regional Directors (RDs), Regional Supervisors (RSs), Field Supervisors (FSs), and survey specialists for their roles on the 2002 NSDUH.

The first 2002 NSDUH management session was held November 18, 2001, in Cincinnati, OH to prepare for the upcoming year. Topics covered during this session included:

- results of previous data collection efforts as presented by Dr. Goldstone of SAMHSA;
- data quality discussions, citing field observation findings and presenting plans for improvement; and
- specific items of interest for each RD region.

In lieu of a May Management Meeting, a series of four management teleconferences was held in the spring to discuss the following topics:

- Post-Training Mentoring;
- Communications;
- Resource Management; and
- ROC Analysis/FI Work Habits.

The first two conferences occurred during March, the third in April and the final conference in May.

5.2 New-to-Project Field Interviewer Training Sessions

5.2.1 Design

Training sessions were held about once a quarter throughout the year to train newly hired new-to-NSDUH FIs. These sessions helped maintain a sufficient staff size to complete S/I within the quarterly timeframes. For each session, there were multiple training rooms staffed by a team of three or sometimes four trainers. Occurring in January, February, and then prior to the beginning of each new quarter, a total of 197 new FIs were trained during these replacement sessions. **Table 5.1** summarizes the interviewer training sessions held for the 2002 NSDUH.

The new-to-project training program consisted of seven full days of training covering the general techniques of interviewing, screening using the Newton handheld computer, conducting NSDUH interviews on the laptop computer, and general NSDUH protocols and technical support. Spanish-speaking FIs attended an additional one day session to review the Spanish translations of the questionnaire and the Newton screening program.

All trainees were required to pass a certification process as part of the successful completion of training. Conducted individually, each trainee had to demonstrate knowledge of the basic NSDUH protocols by completing a straight-forward screening and interview through the beginning of the ACASI questions. Any trainees who did not pass on the first try received immediate feedback and additional individual training to clarify any points of confusion. During the subsequent re-certification attempt, the trainee only had to re-do the portion(s) done incorrectly the first time. Any trainee failing the re-certification process was either placed on probation, (and barred from working until the proper completion of further re-training/re-certification), or was terminated from the project. Of the 197 new-to-project interviewers trained during 2002, 5 were placed on probation for problems with the certification process and no trainees were terminated for certification issues.

To provide consistency between training classrooms, a near-verbatim guide with 22 sections provided detailed instructions and text to ensure all necessary instructional points were covered. In addition to the guide, trainers also used a videotape that contained multiple segments for use throughout training; a workbook containing exercises on the Newton and laptop computer and printed examples; training segment materials used in exercises that replicated actual segment materials; the FI manuals for reference; and the two computers (the Newton and the Gateway laptop) with accessory equipment.

5.2.2 Staffing

At each training site, staff included a Site Leader, Logistical Assistant, a Lead Technician, a Certification Coordinator, and one or more training teams. Each of these roles was well-defined to ensure that training proceeded smoothly.

The Site Leader at each training site coordinated all FI registration activities, hotel relations, and logistics; and monitored trainees and trainers. The Site Leader's specific tasks included:

- collecting and evaluating home study exercises;
- issuing picture ID badges;
- coordinating all services provided by the hotel with the assigned hotel representative;
- managing the trainers and training rooms;

- evaluating trainee performance and working with trainers to resolve problems with trainees, including probation or even termination when necessary as a last resort;
- supervising the certification process and making any final decisions about the status of any trainees failing re-certification; and
- informing trainers about problems or suggestions from other sites and/or the RTI home office.

The Site Leader role was filled by a qualified NSDUH supervisor who had extensive experience with project protocols and management goals.

The Logistical Assistant worked closely with the Site Leader throughout training to be sure all trainees were registered properly, all training rooms had all necessary supplies, and hotel services functioned smoothly. Other duties included grading home study tests and distributing training and incentive checks at the successful conclusion of training.

The Lead Technician served as the point of contact for all technical issues including the proper functioning of all equipment and programs. Other duties included supervising training equipment set up and the initialization and distribution of interviewer computer equipment.

The Certification Coordinator managed the certification process, including establishing appointment schedules, monitoring and distributing certification supplies and materials, and reporting the results to the Site Leader.

Each classroom was taught by a training team consisting of a lead trainer, one or sometimes two assistant trainers, and a technical support representative. The lead trainer and assistant trainer(s) divided the responsibility for presenting sections of the training, with the technical support representative often helping with the more technical sections. The lead trainer had the additional responsibility for the logistics and schedule of the training room. In general, one trainer would train from the front of the room while the other trainer(s) would monitor FI progress, assist FIs with questions, and sometimes operate the computer equipment.

The technical support representative's primary role was to prepare and set-up the computers for each FI; to ensure the proper functioning of the Newton, Gateway and Toshiba projection equipment used for the training presentation; to provide in-class technical help; and in some cases, to present the technical sections of the training program (depending on the classroom's training needs and the technical support representative's training experience).

Training teams were selected based on availability and experience. The lead trainer was usually an RS with considerable training experience. Assistant trainers were usually RSs, FSs, Instrumentation Team members, or survey specialists.

5.2.3 Content of New-to-Project Field Interviewer Training Sessions

5.2.3.1 Day 1

After completing the registration process the evening before, training classes began first thing in the morning with an introduction to the history and scope of the NSDUH presented in a video by Project Director Tom Virag. Next, classrooms went through a three-hour introductory computer session. This included instruction in the use of the Gateway computer hardware and a thorough introduction to the basics of the Newton hardware and software, although the actual screening program was not covered. In the afternoon, trainees were introduced to the importance of professional ethics, respondent rights, and the interviewer's role and tasks on the NSDUH. Trainees with little computer experience could stay after class for some hands-on practice in order to build their confidence.

5.2.3.2 Day 2

Day 2 included a general introduction to survey sampling and counting and listing, followed by an in-depth discussion of how to locate segments and selected DUs. Trainees also learned how to contact selected DUs for screening and the importance of knowing the study. They were given the opportunity to review supplementary materials and practice effective introductions and responses to respondent questions. Trainers then introduced the screening process using a video of a 'real' screening and explanations of the purpose of each question. Following a trainer demonstration, each trainee had the opportunity to try the Newton handheld computer during a group walk-through screening exercise.

5.2.3.3 Day 3

On Day 3, trainees focused on gaining experience and confidence by conducting numerous practice screenings on the Newton. Trainees completed several enumeration and rostering exercises round-robin style as well as individual and paired mock exercises covering the whole screening process. Trainees also learned about the specifics of screening group quarters units. All trainees were invited to attend an evening study hall session for additional practice.

5.2.3.4 Day 4

Training on Day 4 began with explanations of adding missed DUs. The next topic of the day was an introduction to the NSDUH interview and the basics of good field interviewing techniques. Next, trainees learned the details of the NSDUH instrument with a complete round-robin read-through of the entire questionnaire, including question-by-question specifications.

5.2.3.5 Day 5

On Day 5 trainers presented a brief discussion of the functions of the CAI Manager program on the laptop. An individual practice interview exercise allowed trainees to review both the format and questions in the CAI program at their own pace. The next topic was devoted to information about overcoming reluctant respondents and dealing with difficult situations. This section included informative video segments and group exercises. This was followed by a description of the details required in collecting industry and occupation information. Trainees who were performing well could attempt the certification process the evening of Day 5. Since the training program was not complete, anyone not passing this first attempt was given another opportunity at the conclusion of training.

5.2.3.6 Day 6

The next day began with RTI's IRB interviewer training module which covered ethics and regulations involving human subject research, the role of the IRB, and the role of the interviewer in protecting respondent rights. Next, a session on transmitting data had a trainer or technical support representative demonstrate how to transmit from both the Newton and the Gateway. The class then began a series of two paired mock exercises encompassing the entire screening and interviewing process so that trainees could practice the transition from the screening on the Newton to the CAI interview on the laptop. Following each mock interview, a group review session was conducted by the trainer. At some point during the practice mock interviews, trainees attempted a successful transmission on both computers at a station in the training room. The day concluded with a discussion of the project's administrative procedures, project supplies, data quality control, and proper documenting and reporting. Certifications were scheduled for the evening of Day 6.

5.2.3.7 Day 7

Day 7 began with the completion of any remaining discussion on administrative topics. The next section on troubleshooting and technical support informed staff about the most common technical problems they might encounter, steps to take to correct them, and when and how to contact Technical Support for additional help. A brief recap of the entire process of screening and interviewing helped trainees review again how all the tasks fit together. The afternoon was designed as a study hall in which interviewers had a number of tasks to complete while trainers were available to assist as needed. These tasks included another individual interview exercise and various exercises completing electronic production, time and expense reports. Any remaining trainee certifications also took place during this time.

5.2.4 New-to-Project Bilingual Training (Day 8)

A trainer fluent in Spanish conducted a one-day session for RTI-Certified bilingual FIs on the Spanish-language NSDUH materials. These FIs were trained to use the Spanish versions of the screening introduction and rostering questions on the Newton, the CAI instrument, and other 2002 supplemental materials. Only those FIs who were RTI-Certified bilingual interviewers and who had been hired as bilingual interviewers attended this session.

5.2.5 Mentoring of New-to-Project Graduates

After completing New-to-Project training, all graduates were mentored by their FS, another FS or by an experienced FI. Previously referred to as on-the-job-training and conducted as needed, the mentoring program became more formalized in June of 2002. Mentoring of all trainees was required. Standardized instructions were provided to the mentor to be sure all important protocols learned during training were reinforced.

5.3 Veteran Field Interviewer Training Sessions

5.3.1 Design

To prepare the field interviewers chosen to continue from the 2001 NSDUH into 2002, special Veteran FI training sessions were held in January 2002. Having regional sessions throughout the nation served several purposes:

- Technical Support staff were able to properly load the 2002 programs and perform routine maintenance on all FI equipment.
- Through the developed training program, project management expressed appreciation for past efforts and provided explicit instructions for ways to improve future performance.
- Interviewing staff were able to share helpful tips with each other.
- Field Supervisors met with their entire team to discuss specific issues for their assigned area and enhance team rapport.

Veteran training sessions were held at 8 sites including: Anchorage, AK; Atlanta, GA; Baltimore, MD; Cincinnati, OH; Honolulu, HI; Houston, TX; Los Angeles, CA; and Newton, MA. Two separate sessions were held at 6 of these sites, with the A groups meeting on January 5-6 and the B sessions meeting January 8-9, 2002. The Hawaii and Alaska sites each had single sessions to train the staff of those two states. In addition to these early January sessions, two special weekend sessions were held later in January to train traveling field interviewers and any veteran interviewers unable to attend the early sessions. Also, throughout 2002, additional veterans who missed the January sessions were trained with permission on an individual basis.

Table 5.1 summarizes the January Veteran interviewer training sessions.

The Veteran training program consisted of an initial home study (see **Section 4.5.1**) followed by two training days covering topics such as changes for the 2002 study, data quality, being comfortable at the door to help overcome objections, respondent rights and RTI's IRB training module, and details on the new incentive process.

In order to successfully complete training and receive a 2002 assignment, all veteran FIs were required to pass a certification process the same as the one for new-to-project trainees. Veteran certifications occurred the day prior to the start of classroom training. One-on-one, each veteran had to demonstrate knowledge of the basic NSDUH protocols by completing a straight-forward screening and interview (through the first ACASI question). Certifiers gave feedback immediately following the certification attempt but did not provide an outcome of either pass or fail. Official notifications of results were distributed to all staff the morning of Day 1. Those failing the first certification were given appointments for the evening of Day 1 for a re-certification. Any veterans failing the re-certification were either placed on probation (without an assignment) or were terminated, depending on the severity of the error and other circumstances. Veterans on probation received thorough re-training from their FS. When ready, the veteran attempted another certification with RTI staff. If successful, probation status was removed and an assignment given. If not successful, the FI was terminated from the project. Results of the veteran certification process—which are the final results of training—are found in **Table 5.2**.

Standardized certification materials included instructions for the certifier, a verbatim script for the certifier to use during the process, and a form on which to document ratings on all required aspects of the interviewer's performance.

To provide consistency between veteran training classrooms, a near-verbatim training guide with 16 sections provided detailed instructions and text to ensure all necessary instructional points were covered. In addition to the guide, trainers also used a videotape; a workbook containing exercises on the Newton and laptop computer and printed examples; the FI manuals for reference; and the two computers (the Newton and the Gateway laptop) loaded with the new 2002 programs.

5.3.2 Staffing

At each training site, there was a Site Leader, Logistical Assistant, Lead Technician, and a Certification Coordinator with responsibilities as described in **Section 5.2.2** for new-to-project training sessions.

Each classroom was taught by a training team consisting of a pair of FSs. One FS's staff attended during Session A then the other FS's staff came for Session B. The FS pair worked together to divide the responsibility for presenting the various training sections. The presenting

trainer usually trained from the front of the room while the other trainer monitored FI progress, assisted FIs with questions, and sometimes operated the computer equipment.

Training experience varied considerably among the FS staff. For classrooms with weaker training teams, Site Leaders assigned available RSs, survey specialists, or Instrumentation Team members to support the FS training team or, in some cases, to lead the training.

5.3.3 Training-the-Trainers

To prepare all lead and assistant trainers for their training role and to instruct all project staff in the changes for the 2002 survey, a Training-the-Trainers Session was held in Cincinnati, OH on November 15-17, 2001. Classrooms were led by “master trainers” with assistance from other experienced project staff. The groups reviewed the Veteran training guide and materials as well as logistics for the January sessions.

The master trainers were RDs and other members of the management staff or Instrumentation Team. These master trainers attended a two-day Master Trainers session at RTI on October 29-30, 2001 to learn about the Veteran training program and the expectations for the Training-the-Trainers session. In addition, a training expert consultant led the group in a number of exercises to increase awareness of presentation skills.

During the three day session in November, master trainers first led the training teams through a discussion of training presentation skills. Trainers for January then presented their assigned sections of the guide to the classroom. Presenting to this group allowed for multiple classrooms to review the content and test the accuracy of the guide and the training program, submitting comments to the Instrumentation Team for consideration when making revisions. Most importantly, having the January trainers actually train gave them the opportunity to focus on their presentation style and mastery of the material.

Also during this time period, all project management staff completed the same certification process required of the interviewers.

5.3.4 Content of Veteran Field Interviewer Training Sessions

5.3.4.1 Day 1

Day 1 began with a brief presentation of experiences from the 2001 survey (response rates and overview of field observation results) followed by some actual study results from the 2000 survey. After an overview of the changes for 2002, trainers presented the RTI IRB interviewer training module on respondent rights and ethics of conducting research involving human subjects. Next on the agenda were the details of the 2002 changes for the Newton and for the CAI instrument. The majority of the afternoon was devoted to numerous ways to increase an FI’s comfort level at the door. At the end of the day, FI computer equipment was returned and a practice screening and interview exercise assigned for homework.

During the evening of Day 1, any necessary re-certifications were completed.

5.3.4.2 Day 2

Day 2 began with a review of the homework assignment. The next topic was data quality, which included discussions of NSDUH protocols and procedures including explanations for the reasons behind the various protocols and procedures. As part of the discussion of field observations, interviewers were asked to observe an FI at work as shown in a video segment. Next, classes reviewed the changes related to the use of the cash incentive, including changes in overcoming objections and handling the incentive administratively. Trainers then presented a short module on what makes a good Record of Calls.

FSs then selected and led one of three workshops to spend more time on a topic where the region could use some improvement. Workshop choices included Closing the Deal, Restricted Access, and Using the Segment Kit. The remainder of the training consisted of an FS Team Meeting in which each FS could discuss region specific topics and have time for team building exercises.

5.3.5 Special Veteran Training Sessions

Two additional veteran training sessions were held January 12-13, 2002 in Cincinnati, OH and January 19-20 in the RTP, NC area to accommodate those veteran interviewers unable to attend the early January sessions and to train traveling FIs. Various project staff served as the trainers for these sessions, so that FSs could focus on managing data collection.

As the year progressed, several veterans from 2001 who wished to continue working were trained individually via home study and telephone conference with an FS. These veterans missed the January sessions due to illness or pre-approved scheduling conflicts. With special permission, one-on-one training brought these five interviewers up-to-speed on the 2002 NSDUH. Following successful completion of the home study, an FS (who had been chosen based on training ability) worked with the veteran for one to two days covering the content of the 2002 Veteran Training session. While group exercises were excluded, all individual exercises, homework, and discussions occurred. When finished, the veteran completed the certification process via telephone, typically with a Regional Supervisor.

5.4 Ongoing Training/Mini Camps

Regional team meetings with particular FS teams occurred throughout the year. As needed, team meetings were held to introduce interviewers to a new supervisor (either FS or RS). In other situations with teams performing below expectations, the focus of these meetings was to provide further training for FIs on refusal avoidance, refusal conversion, and efficiently working case assignments. Additional discussion topics included data quality and specific team

performance issues. These “mini-camp” meetings were held in locations central to an FS’s team. An RTI project manager was required to be present at these meetings; therefore, an RD and/or RS attended. In addition to team meetings in regions with a new supervisor, one team meeting was held in Arkansas in order to improve regional performance.

5.5 Periodic Evaluations (eVals)

Periodic evaluations of interviewer knowledge were conducted via an arrangement similar to the electronic home study for veterans. All FIs picked up the eVal program via transmission and had about one week to complete the 10 item questionnaire. These 10 items were assigned randomly from a bank of close to 100 questions all designed to test interviewer knowledge of basic NSDUH protocols. When finished with the open book evaluation, the computer program scored the answers so that the FIs could receive immediate feedback about their results. To pass, FIs had to score at least 80%. FIs not achieving that score received another set of 10 questions to complete. Any FI not scoring at least 80% on the second set of questions was placed on probation pending the completion of further re-training with the FS.

For the first eVal issued in May of 2002, over 98% of the current interviewers passed on the first try. Of the 12 FIs requiring a second attempt, only one failed. The results of the second eVal issued in August, 2002 were similar: over 99% passed on the first try, and only 1 of the 6 needing a second attempt was placed on probation. Results from the 2002 eVal program are provided in **Table 5.3**.

5.6 In-Person Site Visits

5.6.1 FI Site Visits

After completing training, FIs continued to need opportunities to improve or refine their screening and interviewing skills. During weekly conference calls and at other times as needed, an FI and FS discussed questions or problems. However in some cases, an FS made an in-person visit to work with the FI and increase the FI’s skills and experience through on-the-job training. These in-person visits were not always a reaction to a major problem; they were sometimes a proactive measure taken to ensure success in the field and to reduce FI attrition. All such visits were subject to prior RS approval.

5.6.2 FS Site Visits

While there were opportunities for FSs to enhance their skills of managing NSDUH production through work with the RS and regional management sessions, in some cases, management staff identified a need for more intense one-on-one training. In-person visits by an RS were used primarily for the purpose of observing and coaching FSs in effective methods of managing organizational and administrative tasks. However, these RS visits were

almost always for the purpose of troubleshooting and addressing a major problem centered around concern about an FS's performance, or to help a new FS transition into the position. These visits were subject to prior RD approval.

5.7 Problems Encountered

5.7.1 Staffing the Various Training Sessions

Leading the training sessions held throughout the year required involvement of project staff with other NSDUH responsibilities. These dedicated staff trained each day and then completed their other project duties in the evenings. Training planners tried to rotate staff across the various training assignments throughout the year to avoid overloading any one individual. This seemed to work reasonably well.

5.7.2 Veteran Home Study

Implementing an electronic home study for Veteran FIs involved many staff from question developers to programmers to web designers working to display the results for managers to use. Great teamwork accomplished the task in a timely fashion.

The requirement that all FIs successfully complete the home study process in order to be able to attend training and continue on the project caused concerns for many FIs. Although the materials explained that the questions tested basic knowledge of protocol and were not designed to be tricky, FSs had to spend time providing reassurance.

5.7.3 Certifications

Similar to the veteran home study, the development of the certification process was very demanding. Significant effort was involved in order to ensure fairness, ease of use, consistency between sites, and accurate reporting of results. Once again, dedicated staff were able to complete the work on schedule.

The implementation of the certification process, particularly at the veteran trainings, caused additional problems. Staff had to train during the day and then serve as certifiers in the evenings. Due to the number of veterans requiring re-certification, the time demand issue was significant. The Certification Coordinator had the difficult job of scheduling the re-certifications and tracking all the results.

Also problematic was the additional stress placed on veteran FIs who depend on their jobs and feared the consequences of failing the certifications.

Table 5.1
2002 NSDUH Interviewer Training Programs

Month	FI Training Sessions Date & Location	FIs Trained	Cum. No. of FIs	Attrited FIs	Cum. No. of Attrited FIs

Veteran Training/Certification Results

Veteran Training Session	Successfully Completed Training/Certification	Completed Training on Probation due to problems with Certification	Failed Certification (terminated from project)	Total
Session A	357	22	3	382
Session B	308	21	8	337
January Make-Up – Cincinnati	20	2	1	23
January Make-Up – RTP	8	0	0	8
Vet One-on-One Training	5	0	0	5
Total Veterans	698	45	12	755
Total Veterans Graduating from Training	743			

Note: 44 of the 45 veteran FIs completing training on probation received additional training and then completed the follow-up telephone certification process successfully. The other interviewer did not attempt the telephone certification process and was terminated.

Table 5.3
Results from Home Study and Periodic eVals

Test Name	Passed on First Try		Failed on First Try						Total Passing
	Count	%	Count	%	Passed on 2nd Try		Failed 2nd try*		
					Count	%	Count	%	
Home Study, Dec. 2001	754	98.6	11	1.4	10	90.9	1	9.1	764
eVal, May 2002	718	98.4	12	1.6	11	91.7	1	8.3	729
eVal, August 2002	695	99.1	6	0.9	5	83.3	1	16.7	701

*Failures of the second try of the Home Study resulted in Termination while the consequences of failing the 2nd try for an eVal resulted in Probation.

6. DATA COLLECTION

This chapter presents the basic data collection procedures given to field staff working on the 2002 NSDUH. For further details or specific instructions, consult the 2002 NSDUH Field Interviewer Manual.

6.1 Contacting Dwelling Units

Interviewers were assigned specific sample dwelling units (SDUs) to contact with the addresses or unit/location descriptions displayed on the Newton handheld computer. The sample was released in partitions, with additional units made available as needed depending on progress during the initial weeks of data collection each quarter.

6.1.1 Lead Letter

Initial contact with residents of the specific SDUs was made through a lead letter which gave a brief explanation of the nature of the study and its methods. The letter was printed on Public Health Service (PHS)/Department of Health and Human Services (DHHS) letterhead and signed by both the SAMHSA Assistant Project Officer and the RTI National Field Director.

For all SDUs with a complete address (i.e., not a location description), prepared letters preprinted with the addresses were included with the assignment materials distributed to FIs each quarter. Interviewers reviewed all addresses to check that they could be mailed, signed the letters and mailed them via first class mail prior to and throughout the first part of the quarter so that the letters arrived fairly close to the time the FI expected to be in the area. Any SDUs lacking a complete mailing address were not sent a letter. To allow for these cases and other instances of delivery problems, each interviewer had extra copies to give to respondents during a personal visit. A copy of the letter, in both English and Spanish, was also included in the Showcard Booklet for reference.

6.1.2 Initial Approach

Before knocking on the door of an SDU, the FI selected the appropriate case for that specific unit on the Newton. Each FI possessed a personalized letter of authorization printed on PHS/DHHS letterhead authorizing the FI by name to work on the study, and approached the door of the SDU with his/her RTI identification badge clearly visible. The FI also carried a variety of information materials such as Question and Answer Brochures, NSDUH Highlights, and copies of newspaper articles about NSDUH.

6.1.3 Introduction/Study Description/Informed Consent

When contacting the unit, the FI asked to speak with an adult resident (18 or older) of the unit who could serve as the screening respondent. The FI introduced himself/herself and the study. As scripted on the Newton screen, during the introduction the FI mentioned the lead letter and gave the screening respondent the Study Description. The Study Description, which was also included in the Showcard Booklet for reference, explained the purpose of the data collection effort, assured the respondent that all information gathered would be handled in the strictest confidence, and estimated the time required to complete the interview. The Study Description also stated that respondents were free to withdraw from the study at any time. Therefore, the Study Description provided all required aspects of Informed Consent for both the screening and interviewing portions of the study¹.

6.1.4 Callbacks

If no respondent was available or another situation was found at the unit so that screening could not be completed during the first visit, a minimum of four callbacks was made to the unit so that each SDU was visited at least five times in an effort to complete the screening. These contacts were made at different hours on different days of the week to increase the likelihood of completing the screening.

6.2 Dwelling Unit Screening

Screening was performed at each SDU by obtaining information about the residents of the unit to determine whether or not any household member would be eligible for the NSDUH interview based on the ages of the SDU members. The screening program guided the FIs through the process of asking age, gender, race/ethnicity, and military status for all persons aged 12 and older who lived at the unit for most of the calendar quarter, and the information was entered into the Newton.

6.3 Within-Dwelling Unit Selection

Once the roster information was entered and verified, the FI started the within-dwelling unit selection algorithm on the Newton by tapping the “Make Selection” button. The Newton automatically determined, based on the composition of the household roster, whether or not anyone in the unit was selected for the interview.

The system allowed for the selection of none, one, or two members of a household for an interview. Dwelling units with 12- to 17-year-olds on the roster were more likely to have

¹ Since RTI began conducting this survey, there have been no reported incidents involving a breach in confidentiality or any problems as a result of respondents' participation in the survey. Based on that information, RTI's IRB determined that participation in the NSDUH does not pose any known risk to its participants. Therefore, the standard "no known risks or benefits" phrase is not required as part of the informed consent process.

persons selected for an interview. It was possible that if two household members were chosen, they could be within the same age group.

In order to identify each selected individual, the Newton displayed the person's roster number (based on the order in which household members were listed), the age, gender, and either the relationship to the householder (for housing units) or a first name (for group quarters units). Also listed on the Newton was a QuestID number, which was required to start the computerized interview on the laptop. FIs transmitted all the completed screening data contained on the Newton to RTI each evening.

6.4 Interview Administration

6.4.1 Informed Consent/Getting Started

Once the selected individual(s) were identified during screening, the FI asked to complete the interview(s) during that visit. If unavailable, the FI entered information about possible times for future contacts in the Newton Record of Calls. A minimum of four additional visits was made at different times of day/days of the week in an attempt to complete the interview.

For adults selected for the CAI interview, the FI used introductory scripts from the Showcard Booklet to introduce the study and the interview process. To meet the requirements of Informed Consent, the Study Description was provided as well. After receiving consent, the FI began the interview in a private location.

If the selected individual was aged 12-17, the FI was responsible for obtaining verbal consent from a parent or guardian before contacting the youth. The only exceptions to this rule were in certain group quarters situations, like dormitories, where such consent was unobtainable, or if the youth was an emancipated minor. A separate paragraph for parents/guardians was included in the introductory script. Once parental permission was granted, the FI approached the youth and introduced the study using the script to obtain the youth's agreement to participate. Parents were then asked to leave the interview setting to ensure the confidentiality of the youth's responses. When ready, the FI and the youth began the interview.

6.4.2 Computer Assisted Interviews (CAI)

The CAI interview began in the CAPI mode (computer-assisted personal interviewing), with the FI reading the questions from the computer screen and entering the respondent's replies into the computer. After completing the Reference Date Calendar, the FI explained to the respondent how to use the computer for the ACASI (audio computer-assisted self-interviewing) sections. Utilizing ACASI methodology for the sensitive drug use/non-use questions enhanced privacy since the respondent listened to the pre-recorded questions through the headphones and entered the responses directly into the computer. Beginning with a practice session which introduced the various computer keys used during the interview, the respondent then proceeded through the interview. Four times during the ACASI portion of the interview, the respondent was instructed to ask the interviewer for a specific picture pill card designed to aid respondent recall. When the respondent was finished with the ACASI portion, the interviewer once again took charge of the computer, asking additional demographic questions as well as health care, insurance, and income questions. During both the beginning and ending CAPI portions, showcards were utilized to assist respondents in answering the questions.

The average CAI administration times overall and for the various sections of the CAI interview by respondent age (youth 12-17 or adult 18+) and survey year (2001 and 2002) are given in **Tables 6.1** through **6.31**. These timing tables were calculated using audit trail data, which records responses and the time spent on each item. All available data are included in these tables: no ranges for appropriate lengths were established, so outliers are included. For example, in one case, the interviewer completed the interview but did not completely exit the case until two days later, causing an extremely high total time value. Extremely low values are usually attributed to breakoffs occurring within a section or the loss of data due to errors in data transmission. Full audit trail records do not exist for all completed interviews, as transmission errors sometimes caused part of the audit trail data to be lost, or computer processing issues occasionally meant that not all needed audit trail values were recorded.

Please note that the total number of interviews included varies between tables due to interview skip patterns and missing timing data, which may result from unresolved breakoff times. Interview sections with missing data, and any totals impacted by those sections, were not included in the analysis. Consider an example: if timing for alcohol for a particular interview was missing, then the timing data for alcohol, total ACASI, total core, and total time from that interview were excluded from the timing tables. Also note that variations in the questionnaire content between the survey years (e.g., questions added or deleted) may affect the comparability of some timing statistics. Additionally, discrepancies in sample size between 2001 and 2002 result from retaining audit trail files from 1 in every 3rd data transmission in 2001 versus retaining all transmitted audit trail files in 2002.

6.4.3 End of Interview Procedures

After the last interview question, the interview process involved several final steps. FIs had to:

- prepare the Verification Form and ask the respondent to complete the remaining items on the form;
- have the respondent seal the completed Verification Form in a postage-paid envelope addressed to RTI;
- give the respondent the cash incentive;
- prepare the Incentive Payment Receipt, giving the appropriate copy to the respondent;
- complete the FI Observation Questions;
- enter the final result code in the Newton;
- gather all interview equipment and materials; and
- thank the respondent.

All completed Reference Date Calendars and Incentive Payment Receipts were sent weekly to the Field Supervisor. Sealed Verification Form envelopes were mailed to RTI as soon as possible. Each night FIs transmitted interview data to RTI.

6.5 Data Collection Management

Project management on this massive study can be summed up in one word: *communication*. For instance:

- Interviewers throughout the country reported to their Field Supervisor at least once each week to discuss production, problems encountered and possible resolutions, feedback on past work, plans for the next week, and any administrative issues.
- Field Supervisors each reported to their Regional Supervisor weekly, discussing production, costs, goals, staffing, and other administrative issues.
- Each Regional Director held a weekly meeting with his/her staff of Regional Supervisors to share project news and goals while addressing any problems within the region.
- All Regional Directors met each week with the National Field Director and the Project Director.
- All Directors and other key management staff met weekly with SAMHSA representatives.

Although the more formal meetings were held weekly, staff communicated almost constantly through the widespread use of e-mail. This management tool increased awareness of project issues by effectively passing information through the various management levels. The capability

to send messages to interviewers using a one-way electronic messaging system on their project laptop computer allowed for timely sharing of information with all field staff.

With the Web-based project Case Management System, all management staff had access to a tremendous amount of information on the status of events in the field. Additional details on the CMS are provided in **Section 8.2**.

Another helpful management tool was the quarterly Performance Improvement Plan. At the end of each quarter of data collection, FSs developed specific plans in an effort to target particularly troublesome areas for improvement during the next quarter. Plans included the following information:

- A statement of the problem/situation to be addressed.
- A diagnosis of the problem in the past.
- Projected or desired outcomes.
- Specific efforts designed to accomplish these outcomes.

RSs assisted in the plan development and monitored the results of the plan's implementation.

6.6 Controlled Access Procedures

At times during the data collection process, interviewers had difficulty gaining access to particular SDUs. Interviewers with challenging circumstances were instructed to be observant, resourceful, and keep their supervisors informed of the situation. Additional suggestions taken from FS experience or from RTI's "Guide to Controlled Access Situations" were discussed. Talks with managers/owners generally centered on the importance of the study, SAMHSA and RTI's emphasis on confidentiality, and the right of the individuals to make a personal decision about participation. Supervisors sometimes contacted managers/owners directly to answer questions or concerns.

Due to prior efforts by staff who listed the dwelling units, many access problems were resolved readily. Listers recorded contact information and other steps followed to secure access so that interviewers could follow the same strategies or build on already-established relations. Supervisors at the listing stage used special reports on the CMS to monitor access situations; supervisors for screening and interviewing used the same reports and recorded additional information to update the reports.

For continuing problems, RTI had a system to generate individualized letters and packets of information about the project. When required, FIs and FSs provided basic information to RSs, who then requested the packets. Upon receiving the request, specialists at RTI prepared a cover letter and assembled materials to fit the situation. The packet was often sent via Federal Express to increase the importance placed on the contents and ensure timely delivery. A video which further explained the need for access was also available for inclusion in the packets. To assist in

gaining access to colleges and universities, a special letter signed by the presidents of both Duke University and the University of North Carolina was available.

For persistent problem situations not resolved through FS/FI efforts or the letters/packets, “Please Call Us” letters were sent to the SDUs. Special care was taken that calls resulting from the letters were directed to the authorized RS or FS to set up an appointment so the FI could return and complete screening, or, in dire situations and with permission, screening information could be obtained by the FS or RS over the telephone.

Occasionally controlled access problems required assistance beyond the RS level so Regional Directors—and sometimes even the National Field Director—became involved.

6.7 Refusal Conversion Procedures

More often than desired, potential respondents exercised their “right to refuse to participate.” The following were in place to try to prevent refusal situations:

- The 2002 Field Interviewer Manual gave specific instructions to the FIs for introducing both themselves and the study. Additionally, an entire chapter discussed “Obtaining Participation” and listed the tools available to field staff along with tips for answering questions and overcoming objections.
- During New-to-Project FI training, two sections of the guide covered details for contacting dwelling units and how to deal with reluctant respondents and difficult situations. During exercises and mock interviews, trainees were able to practice answering questions and using letters and handouts to obtain cooperation.
- During the 2-day Veteran FI training, most of one afternoon was spent discussing various ways for FIs to increase their comfort level at the door, thus increasing their confidence and ability to handle the many situations encountered in the field.
- All aspects of the NSDUH were designed to exude professionalism and thus enhance the legitimacy of the project. All materials provided to the public were developed carefully. Interviewers were instructed to always behave professionally and courteously.

In refusal situations, staff followed these steps:

- Detailed notes describing the situation were recorded in a Refusal Report on the Newton. FIs classified the refusal according to one of eight categories.
- After transmission from the Newton to RTI, the category of refusal and any notes were then available to the supervisor on the Web-based CMS. The FI and FS could then discuss the situation, with the FS suggesting additional tactics if necessary.
- Once the refusal situation was discussed, a refusal conversion letter was sent (if appropriate). On the CMS, the FS selected a specific letter based on the stage of the case (screening or interviewing), the category of the reason for the refusal (too busy, confidentiality concerns, etc.) and, for interviewing, the person to be addressed (the actual respondent or the parent of a selected youth). The FS could also delete the request for the letter (in situations where a letter would not be

helpful or could not be delivered) or release the letter for automatic production and mailing. During 2002, 17,623 refusal conversion letters were mailed.

- The interviewer returned to the DU to try again with other tactics.
- Cases could be transferred to a different interviewer if necessary.
- Supervisors were available to reluctant respondents to discuss the importance of participation.

6.8 Problems Encountered

6.8.1 Size and Scope of the Project

By selecting areas throughout the entire country, many different types of situations arose that had to be resolved. With the large staff required by the size of the project, communication was vitally important yet it was challenging to ensure that tips and suggestions were consistently conveyed to all staff.

6.8.2 Interviewing Staff Attrition

The constant turnover of interviewing staff meant there were not enough interviewers to adequately cover the assignments in all areas. Once replacement staff were in place, FSs underwent the learning curve process with these new FIs rather than being able to build on experience FIs had gained in the field. The continued attrition caused FSs to spend considerable time dealing with staffing issues (recruiting, hiring, more intense supervision of new employee, etc.) and less time on appropriately managing the most difficult cases.

6.8.3 Refusals

Refusals at the screening and interview level have historically been a problem for the NSDUH (as with all national-level household surveys). The introduction in 2002 of the \$30 cash incentive for selected respondents completing the interview decreased the number of refusals and increased the number of interviews conducted in one or two visits. However, interviewers still had to deal with numerous issues in an effort to obtain cooperation:

- The shifting economy meant members of selected households employed at higher level jobs were at home less and less inclined to devote the necessary time to participate. Persons employed at lower level jobs often worked several jobs so were also hard to find at home.
- A larger percentage of cases involved households with two persons selected for interview. Historically, response rates in households with two respondents are lower due to more frequent refusals by the second selected individual.
- With the use of a respondent incentive, each interviewer's workload decreased. Many experienced FIs had to resign in order to find other work with steady

income. The shortage of qualified FI candidates to fill FI position openings continued. Those hired were often inexperienced.

- The sophisticated CMS allowed for increased monitoring of questionable FI activities resulting in fewer fraudulent cases being submitted.

6.8.4 Typical Data Collection Concerns

As is common in any large field data collection effort, staff encountered problems such as respondent availability, dwelling unit access (controlled or otherwise restricted), and high crime neighborhoods. Additionally, the use of escorts to increase interviewer comfort levels in unsafe areas had an impact on respondent reactions.

6.8.5 Newton

Using the Newton for electronic screening was a great use of technology, but the Newton had its drawbacks:

- It was sensitive to a variety of weather conditions (and all types were encountered).
- As it became full of data, its response time slowed down and tried respondents' patience.
- The touch-screen technology created a confidence issue for new staff who were unaccustomed to using computers.
- Concentrating on the device meant less eye contact with the respondent, which in turn made it tougher to establish good rapport.

6.8.6 CAI Patches

During the course of data collection for 2002, several problems were found with the logic programmed into the CAI instrument. Modifications were made to the programs loaded on the FI laptops using CAI patches. To receive the patch, FIs simply transmitted and the new program files were installed automatically. Only one patch was issued during the year.

This end-of-February patch:

- Corrected a discrepancy in the demographic module in which 2 year old males subsequently appeared as having an age of 0 instead of 2.
- Updated the Spanish question QI24 to more closely match the English text.
- Corrected a typo in a WAV file reference in the marijuana module.

7. DATA COLLECTION RESULTS

7.1 Overview

By following the data collection procedures already discussed, a total of 178,013 units were selected. During the screening process 150,162 units were identified as eligible, that is, the units were not vacant or only occupied by active-duty military personnel, or other similar circumstances. From this number of eligible cases, 136,349 were then screened successfully. The selection procedure in the Newton yielded 80,581 sample eligible DU members. From this number, a total of 68,126 interviews were then completed.

7.2 Screening Response Rates

The **screening response rate** is the number of completed screenings divided by the Total SDUs minus those SDUs not eligible to be included in the NSDUH. Ineligibles include vacants, not primary residence, not a DU, GQU listed as HU, HU listed as GQU, only military, other ineligibles, and those SDUs where the residents will live there less than half of the quarter.

As a brief summary, **Table 7.1** lists the sample totals and the national screening and interview response rates for the 2000, 2001, and 2002 surveys. Then, **Tables 7.2** through **7.15** present the screening response rates for the 2002 sample nationwide. Within each pair of tables, the first provides the unweighted percentages, while the second provides the weighted percentages. The final national screening response rates for the 2002 NSDUH were 90.80% (unweighted) and 90.72% (weighted).

Tables 7.2 and **7.3** show the national totals for the various screening results codes as broken down by population density. **Tables 7.4** and **7.5** redistribute the complete and incomplete screening results codes shown in the previous two tables. The next sets of tables list results for each state, broken down by population density (**7.6** and **7.7**), eligibility rate (**7.8** and **7.9**), completion rate (**7.10** and **7.11**), and nonresponse rate (**7.12** and **7.13**). **Tables 7.14** and **7.15** show the reasons given for screening refusals for the national totals and then, in alphabetical order, for each state. Both unweighted and weighted tables are presented together for each state.

7.3 Interview Response Rates

The **interviewing response rate** is the number of completed interviews divided by the total number of eligible respondents chosen through screening. If there are any ineligible respondents (under 12 or actually in the military), these are subtracted from the total. The national rates for 2000, 2001, and 2002 are shown in **Table 7.1**. The effect of the \$30 cash incentive implemented for 2002 is apparent when comparing between survey years.

Tables 7.16 through **7.27** present the interview response rates for the national sample. The final national interviewing response rates were 84.54% (unweighted) and 78.56% (weighted).

Tables 7.18 and **7.19** present, in alphabetical order, the unweighted and weighted interview response rates for each state by age group. Both tables are presented on each state's page. Similarly, **Tables 7.20** and **7.21** show national and state results of incomplete interviews by age, while **Tables 7.22** and **7.23** contain interview refusal reasons by age group for the nation and for each state.

Remaining interview result tables are presented in pairs with the first table providing the unweighted percentages and the second table providing the weighted percentages. **Tables 7.16** and **7.17** show the interview response rates by age group and gender. More detailed information by gender and smaller age groups is shown in **Tables 7.24** and **7.25**. **Tables 7.26** and **7.27** present a summary of the interview response rates broken down by several factors including race, type of county, geographic region, and gender.

7.4 Spanish Interviews

The percentages of completed interviews that were conducted in Spanish are shown by state in **Table 7.28** (unweighted) and **Table 7.29** (weighted). Spanish interviewing percentages also were analyzed by age and county type in **Table 7.30** (unweighted) and **Table 7.31** (weighted). **Table 7.32** presents the number of English- and Spanish-version interviews conducted by region and by population density.

7.5 Interviewer Assessment of the Interview

As part of each CAI interview, FIs were required to assess the respondent's level of cooperation, understanding, and privacy during the interview. FIs also were asked to record whether the respondent needed assistance during the ACASI questions and what type and amount of assistance the FI provided. Other questions asked whether the laptop seemed to influence the respondent's choice to participate, and if respondents revealed to the FI answers entered during the ACASI section.

All of these data were captured in the FI Observation Questions at the end of the interview and are summarized in **Tables 7.33** through **7.38**. **Table 7.33** shows the FI's assessment of the need to provide assistance to respondents in the ACASI section. **Tables 7.34** through **7.38** present data based on the FI's assessment of the respondent's level of understanding of the interview, the respondent's cooperation during the interview, the level of privacy during the interview, how the laptop influenced participation, and finally how often the respondent revealed answers in the ACASI section. Each of these tables is broken down by age and race/ethnicity.

7.6 Number of Visits

FIs were required to make at least five visits to dwelling units when attempting to complete screening and interviewing. In reality, callbacks continued to be made as long as the FS felt there was a chance that the screening or the interview could be completed in a cost-effective manner. In some cases, more than 10 visits were made to complete a screening or interview. **Tables 7.39** and **7.40** present data on the number of visits required to complete screenings and interviews.

**Table 7.1
Summary of NSDUH Results**

	2000		2001		2002	
Eligible DUs	182,576		171,519		150,162

8. QUALITY CONTROL

While every step was designed to help collect the highest quality data possible, the 2002 NSDUH included several specific quality control processes which are described in this chapter.

8.1 Field Supervisor/Interviewer Evaluation

8.1.1 Regular Conferences

Each field interviewer had at least one regularly scheduled weekly telephone conference with his/her Field Supervisor. During this call, the FI reported progress made toward completing the work; reviewed production, time, and expense information for the week; discussed field problems; and asked any questions that had emerged during the week. The FS then provided feedback on the progress and quality of work and offered solutions to problems or questions encountered. The FS also shared any information from project managers, such as “Data Quality Item of the Week” notices or approaching project deadlines.

Regular weekly telephone conferences were also held between the Regional Supervisor and each of the FSs in his/her territory. FI production and performance were discussed during these conferences, as were budget considerations and any problems that were occurring.

8.1.2 Observations at New-to-Project Training/Training Evaluations

Beginning at training, FI performance was monitored closely and consistently throughout the field period. Training classrooms were small enough to observe and evaluate each FI’s individual performance and comprehension. The classroom trainers worked together to evaluate FIs on a daily basis, rating each trainee on a ten-point scale with one being poor and ten signifying a trainee with excellent potential to be a good FI. Any rating under five was further explained in the report, documenting such things as attention difficulties or physical limitations like poor eyesight. In all cases this evaluation system was used strictly as a management tool—ratings were not shared with the trainees. Reports of struggling FIs were given to the Site Leader daily to help identify problems and develop resolution plans. The information was also forwarded to the trainee’s supervisor to keep the FS informed of progress. These evaluations ensured that those FIs who were struggling with training program content but willing and capable of doing the work would receive the necessary help both during and after training to interview successfully on the NSDUH.

Through the certification process (see **Section 5.2.1**), formal one-on-one evaluation of each trainee occurred. As explained earlier, all trainees were required to complete the certification in order to successfully complete training.

In addition, New-to-Project graduates were mentored (see **Section 5.2.5**) to observe their behavior in the field and reinforce the important study protocols learned during training.

8.1.3 Observations at Veteran Training/Ongoing FI Knowledge Evaluations

Veteran FIs continuing work on the study in 2002 were tested and trained to be sure they met the standards necessary to serve as a NSDUH interviewer. Beginning with the electronic home study (see **Section 4.5.1**), interviewers could only continue working if they demonstrated knowledge of basic protocols. During veteran training, FIs were monitored through classroom performance and through the one-on-one certification process (see **Section 5.3.1**).

Periodic evaluations (eVals) of interviewer knowledge occurred during the year (see **Section 5.5**). This tool not only tested knowledge but reinforced that following protocol helps collect data of the highest possible quality. All interviewers also received a laminated copy of the form “Steps to Maximize Data Quality” (see **Exhibit 8.1**) which listed the most crucial NSDUH protocol steps.

8.1.4 Field Interviewer Observations

In-person observations of FIs at work provide insights about the survey and its procedures as well as assessments of interviewer performance and attention to project protocol. Field Observations were implemented nationally throughout 2002.

Around the country, 416 field interviewers were observed completing 814 screenings and 548 interviews. Observers, who were RDs, RSs, FSs, members of the Instrumentation Team, project survey specialists, or SAMHSA staff, had specific forms to complete, noting interviewer behaviors on a number of project protocols. Data from completed forms were used to assess current levels of interviewer knowledge and develop training plans to improve FI skills in identified problem areas. To maintain the integrity of the operation, observers did not give direct feedback to the FIs. Information regarding FI performance was made available to the appropriate FS to share with observed FIs. Results from these observations were formally documented in the Full-Year Field Observation Report (Phase 3).

8.1.5 FS Quarterly Evaluations of FIs

At the end of every quarter of data collection, each FS evaluated the FIs in his/her region to decide how to allocate bonus funds and whether to recommend any merit-based pay raises. FSs considered all the facets of being a “good FI,” including production, response rates, adherence to procedures, costs, timeliness, attitude, commitment, attention to details, lack of data quality errors, and willingness to take on additional work (particularly to work on hard refusals). To decide how to divide bonus funds, the FS ranked each FI. Additionally, pay raises were not

necessarily related to bonus money; an FI might not receive a bonus but could still be eligible for a raise. For both bonuses and pay raises, RSs and RDs reviewed the FS's decisions.

8.1.6 FS Final Evaluations of FIs

At the end of the calendar year, each FS used a standard RTI multiple-choice form to generate an annual evaluation of FIs who were active on the NSDUH. FIs were rated on a 5 point scale (unsatisfactory, poor, satisfactory, above average, and exceptional) on such standard interviewing skills as quality of work, data collection skills, adherence to deadlines, and productivity. The FS also commented on the FI's strengths and any areas needing improvement. The FS used this same form to provide a final evaluation of FIs who "attrited." Completed evaluations were added to the interviewer's personal data file at RTI. The FS generally completed this form without RS or RD input.

8.1.7 FI Exit Interviews

Every month NSDUH management personnel received a listing of those field interviewers who had voluntarily chosen to leave the project (those terminated did not appear on this list). The listed FIs were contacted and a short questionnaire was administered (see **Exhibit 8.2**) to determine the reasons they left the project. These data were then keyed and used to produce a quarterly report for project management summarizing the reasons. Of the 261 FIs who were terminated from the NSDUH in 2002, 160 voluntarily chose to leave the project. The exit interview was completed with 74 of these FIs. **Exhibit 8.3** contains the total results for all FI exit interviews conducted during 2002. **Table 8.1** summarizes the most important reasons reported by FIs for their resignation. Eleven FIs completing the exit interview (15%) indicated the most important reason for leaving was some difficulty working with their supervisor, while eight (11%) said finding a new job was the most important reason and another eight (11%) wanted to work but were unable to continue due to insufficient work in their area.

8.2 Web-based Case Management System (CMS)

Each FS was equipped with a laptop computer and given access to the NSDUH Web-based Case Management System. FIs transmitted screening data daily from the Newton, including record of calls data, verification information for non-interview cases, added DUs, and address updates. Newton screening data transmitted to RTI were checked by the control system's defined consistency checks, and then posted to the CMS for monitoring purposes. The completed interview data were transmitted to RTI by FIs from their laptop computers and checked against screening data to ensure each completed case was received and that the correct respondent was interviewed.

The FS System on the CMS included the following data quality functions:

- Daily and Weekly Reports with access to archived reports (for comparison data).
- An interactive data information page for monitoring production.
- An interactive record of calls page for monitoring FI work patterns.
- Verification data.

8.2.1 Data Quality Report

The Data Quality Report displayed various data quality issues and allowed the FS to provide specific feedback to FIs who were experiencing problems. The report included missing data items on Verification Forms and procedural errors such as Case ID or Verification ID problems. The report also included a list of cases that could not be used due to the FI interviewing the wrong household member.

8.2.2 Missing Screening Data Report

The Missing Screening Data Report displayed by FI the screening data that were missing for specific Case IDs. FSs used this report to monitor the quality of the screening data that each FI collected. The data on this report represented information that the respondent refused to provide or indicated areas where the FI either made errors or may have been taking short-cuts. FSs monitored specific problems and trends and were able to provide immediate feedback and re-train FIs as necessary.

8.2.3 Overdue Cases Report

FSs used the Overdue Case Report to account for completed interviews that should have already arrived at RTI. Interviews were considered overdue if not transmitted within three days of the date of interview (as reported by the Newton Record of Calls data).

Cases displayed on this report were investigated to ensure the completed interview was transmitted or that the correct Case ID was used and reported as a completed interview. FSs and programming staff worked to resolve any pending issues with overdue cases.

8.2.4 Length of Interview Report

The Length of Interview Report listed the completed interviews that were either finished in a relatively short or extremely long amount of time. The times were derived from the CAI interview file (total time and timing of specific sections) so that FSs could monitor possible problem situations (such as short-cutting or problems with the laptop that might cause the time-frame to be strange).

8.2.5 Case Data Information

The Case Data Information portion of the CMS provided all FI production data and allowed the FS to interact with the data and view it in special ways. The type of cases the FS viewed was determined by the drop-down items selected. Each of the following items was available to select (single or multiple items), after which a data table containing all of these items (for the subset of cases) displayed:

- Case ID
- Type of case (Screening, Interview A, or Interview B)
- Status and Result Code (record of calls event codes)
- Result Code Date (date of the record of calls code)
- # Calls (total number of contacts at the household)
- FS Note (any notation the FS attaches to the case)
- Questionnaire Rec'd (date the case was transmitted)
- Verification Status
- FI ID (FI assigned to the case)
- Address of the SDU.

There were special features within this function that displayed additional data:

- Overdue cases (highlighted in yellow)
- Added DUs (highlighted in green)
- Cases where a call record had not been entered in more than 14 days (highlighted in pink)
- Click on CaseID to view entire record of calls
- Click on Refusal Code to view entire refusal report
- Click on Verification Status to view verification history of case
- Click on FI ID for production, time and expense data
- Click on address to view map of the area.

The data provided in this table allowed the FS to evaluate many aspects of the FI's work.

8.2.6 Filter Record of Calls

The Filter Record of Calls allowed the FS to view the FI's record of calls events by filtering on the following items:

- Case ID
- Data Type (Screening, Interview A, or Interview B)
- Result Code
- Day of week (All days, Mon-Sun)
- Time periods of day (6am-Noon, Noon-4pm, 4pm-12am, 12am-6am)
- Date (before a date, after a date, a specific date or between two dates)
- FI.

The FS could analyze the FI's work pattern and spot instances where an FI might have entered "false" results.

8.3 Data Quality Team

The Data Quality Team was responsible for the identification, resolution, and distribution of information to field staff concerning data quality and verification issues. The Data Quality Manager supervised a team of Data Quality Coordinators (DQCs) as they monitored the data quality of specific regional areas. The Manager also interacted with supervisors in RTI's Telephone and Internet Operations (TIO) unit (for verification issues), and data receipt and data preparation units to oversee data quality issues. The Data Quality Team also prepared weekly "Data Quality Item of the Week" notices which reviewed or clarified procedures for a particular issue. These notices were given to the RDs each week for use during the RD-RS conference calls. The RSs then passed the information along to the FSSs who shared the news with the interviewers.

Each DQC reported the results of the in-house data quality tasks, consistency checks, verification task completion, and interpretation of the results to their RD region. They also planned and conducted field verifications as necessary.

8.4 Verification of Completed Cases

In order to verify the quality and accuracy of the FIs' work, a complex verification procedure was implemented. This involved the selection and verification of at least 15 percent of final interview cases and at least 5 percent of final non-interview screening cases.

Verification contacts for selected cases were made primarily by telephone. For selected interviews where no telephone number was provided, verification was attempted by mail. Whenever possible, all verification contacts were made with the actual respondent. Detailed flowcharts illustrate the process for screening verification (**Exhibit 8.4**) and interviewing verification (**Exhibit 8.5**).

The system allowed for the verification of additional work beyond the standard 15 and 5 percent selection rates. Field management staff could elect to increase verification selection up to 100 percent of the FI's completed work. Managers could also select an individual case or a group of specific cases to be verified beyond what was randomly selected. Another available option allowed managers to select all cases completed on a specific day.

8.4.1 In-house Verification

Verification information for completed interviews was obtained from the Verification Form completed by each interview respondent (see **Exhibit 8.6**). For the final non-interview screening codes of 10 (vacant), 13 (not primary residence), 18 (not a dwelling unit), 22 (dwelling unit contains only military personnel), 26 (not eligible for the quarter), and 30 (no one selected for interview), the contact information was recorded in the Newton at the time the case was finalized. For codes 10, 13 and 18, the contact was made with a knowledgeable person,

such as a real estate agent, property manager, or neighbor. For codes 22, 26, and 30, the verification was completed most often with the screening respondent.

The telephone verification was conducted by project trained telephone interviewers in RTI's Telephone and Internet Operations (TIO) unit. Spanish translations of all materials were available for verifications with Spanish-speaking respondents. Again, most of the selected code 70s, and all of the selected codes 10, 13, 18, 22, 26, and 30, were verified by TIO. The NSDUH telephone verification script used depended on the final status code of the case (see **Appendix E**).

For those selected code 70s that did not have a telephone number on the Verification Form but did have an address, verification by mail was attempted. The mail verification letter (see **Exhibit 8.7**) was sent to the respondent to complete and return by mail to RTI. The completed verification letters were keyed, and the results were displayed in the CMS and on the Verification Reports. Of 375 cases for which mail verification letters were sent, 86 were returned by respondents. Most cases verified by this method verified with no problem discovered.

Telephone verification had two stages. During the first stage as described above, telephone interviewers followed a script when speaking with the respondent to confirm that the FI was professional and followed project protocols. The majority of cases were finalized as having no problems. During the second stage of verification, a follow-up call was made to investigate any serious problems found during the initial call. That follow-up call was made by the Call Back Team, an elite group of telephone interviewers who were trained on all project procedures and protocols.

The Call Back Team was responsible for conducting a thorough investigation of each problem case identified. During the follow-up call, they determined whether or not the FI was adhering to project protocols. If not, the Call Back Team caller determined the types and severity of the FI's deviations from protocol. The Call Back Team documented the results and provided a summary to DQCs. This information was used as a basis for re-training the FI, or, in the case of falsification, as evidence to substantiate terminating the FI.

Unlike the initial telephone interviewer who followed a script for verification, the Call Back Team was given example introductions, the problem or problems identified during the first call, and a list of items to cover for each type of case based on the final result code. The Call Back Team conversed with the respondent asking probing questions that allowed the respondent to talk about what happened during the screening or interview process in an attempt to confirm or resolve the identified problem(s).

The result of the call was either a confirmation that the problem (or additional procedural problems) occurred during the screening or interview or a resolution of the problem by clarifying

the issues with the respondent. The Call Back team documented the results on a formal problem sheet detailing the findings of the call. Problem sheets were then sent to the DQCs who reviewed the information for each case and then assigned a final resolution code:

- No Problem—the case verified and resolved without problems
- Error—resolved but verification contact indicated breeches in project protocol
- Unable to Contact—unable to contact the respondent
- Unresolvable—an unresolvable situation (incorrect phone number, respondent refused, initial error could not be confirmed)
- Invalid—interview or screening data cannot be used for analysis due to serious protocol violations or falsification.

Tables 8.2 and **8.3** provide summaries of the results of phone verifications for non-interview screening codes 10, 13, 18, 22, 26, and 30 and for completed interviews. We have not included the mail verification results in Table 8.3 because these cases make up a very small percentage of cases verified.

8.4.2 Field Verification

In addition to the verification procedures conducted on completed work received in-house, additional steps were taken in the field to ensure complete and accurate collection of data. This field verification was generally initiated after one of four circumstances occurred:

1. an FI had an unusually large number of in-house verifications “fail”;
2. an FI had a higher than average percentage of cases with no phone numbers (for screening cases) and/or no Verification Forms (for interviews);
3. the FI exhibited unusual or suspicious patterns of work behavior; or
4. an FI reported numerous cases as being completed but failed to transmit to RTI within three days of completion.

The Data Quality Team worked with the FS and RS to select the cases to be field verified. These finalized cases were transmitted to the Field Verifier’s Newton (either the FS or another FI conducting the field verification) so that the screening data could be verified. The Field Verifier returned to the SDUs that were assigned and queried the respondents in an effort to determine whether or not proper contact had been made by the FI in question. The Field Verifier also verified the screening information. If an interview had been completed, the Field Verifier confirmed some of the demographic data from the interview with the respondent. The Field Verifier also reviewed some protocol issues with the respondent to ensure the FI had followed protocol and acted in a professional manner. Results of the field verification were reported to the Data Quality Team and the FS, RS, and RD. If the Field Verifier found the work to be invalid, he or she reworked the case.

In general, the need for such in-field verification was limited, but it did occur. In the 2002 NSDUH, a total of 1,065 cases were selected for field verification. This process led to the identification and termination of FIs who were determined to have submitted fraudulent work. All their work completed during the current quarter was verified and reworked as necessary. A total of 153 invalid interviews and 154 invalid screenings involving 23 FIs were identified via in-person field verification. All 23 FIs were terminated.

8.4.3 Verification Monitoring Tools

8.4.3.1 Case Data Information Link

The Verification Status on the Case Data Information link on the CMS allowed project staff to view the verification status of each case and monitor trends across status codes or areas. The following Verification Status codes were used to monitor the verification at the case level:

- NF: No Form (Code 70s)
- NP: No Phone
- RE: Refusal—not selected
- NS: Eligible, but not randomly selected for verification
- ST: Selected for Telephone Verification
- SF: Selected for Field Verification
- SM: Selected for Mail Verification (Code 70s without phone numbers)
- OK: Completed Okay
- UC: Finalized—Unable to Contact
- UN: Finalized—Unresolvable
- SS: Completed—Some shortcuts
- IR: Completed—Invalid, then reworked
- IW: Completed—Invalid, not reworked

Since verification selection was random, it helped to see which cases had been selected. If project staff wanted additional cases to be selected for verification, they worked with their region's Data Quality Coordinator to select additional cases to be flagged for verification.

8.4.3.2 Short FI Level Verification Report (Pages 1 and 2)

The Short FI Level Verification Report provided a snapshot of the problems identified during Telephone Verification and Mail Verification. Page one (see **Exhibit 8.8**) provided a summary of data for a subset of codes: 10, 13, 18, 26, and 30. Displayed were the number of cases of these status codes that had no form (code 70 only), no phone, refused,

percent of cases with no form/phone (once greater than or equal to 30 percent), percent of cases refused (once greater than or equal to 30 percent), count of other ineligibles, count of eligibles, count of cases selected for telephone, and count of cases selected for mail. From this data, supervisors could see if an FI had a high percentage of cases with no phones, no forms, refused, and how many have been sent to Mail Verification (which is not as successful as Telephone Verification in obtaining a response).

More specific details of the problems displayed on page one were contained on page two of the report (**Exhibit 8.9**). The second page displayed each problem identified during Telephone and Mail Verification. A case could have multiple problems, so all problems for all cases were displayed here to track trends related to possible shortcutting. There were 49 Problem Codes divided into four groups by Screening and Interview Result Code (**Exhibit 8.10**).

8.5 Industry and Occupation Coding

A team of specially trained industry and occupation coders worked to classify each respondent's job as described in the interview. Using the information recorded, a coder assigned a three-digit industry classification code and a three-digit occupation code from the 1990 Census Alphabetical Index of Industries and Occupations. Independently, another coder also worked the case. A computer program compared the assigned codes and forwarded those with differences to "adjudication." During adjudication, a senior coder reviewed all the available information and assigned final codes. Details on the number of cases requiring adjudication are found for both industry codes and occupation codes in **Tables 8.4, 8.5, 8.6 and 8.7**.

To provide feedback and share information with all coders, bi-weekly quality circle team meetings were held to discuss cases that had gone to adjudication. As the adjudicator led the group through the process of reaching the correct code, coders could increase their knowledge base.

In April of 2002, each interviewer received a listing of tips and helpful hints to use when collecting Industry and Occupation data. Common problem situations from the coding staff were covered to provide examples of the level of detail required to assign codes.

8.6 Problems Encountered

In November 2002, we discovered through a random check for duplicate verification phone numbers that one FI had used his own home telephone number as the verification telephone number for a completed NSDUH case. We investigated further and discovered that in 2001 and 2002, approximately 100 FIs used their own or another FI's telephone number for verification of a screening case. Approximately 25 FIs used their own or another FI's telephone number for verification of an interview case. Seven of the FIs involved were no longer working on the NSDUH as of November 2002. We confronted each active FI involved. When

confronted, three FIs admitted to falsification and resigned from the project immediately. For the remainder of the staff, we clarified the inappropriateness of using one's own or another FI's telephone number for verification, issued warnings and placed FIs on probation accordingly, and began conducting field verifications of all Quarter 4 work completed by FIs who did not offer a plausible explanation.

In January 2003, we completed our field verification efforts on all 2002 cases completed by 3 FIs identified as having falsified in New Mexico, Nevada, and Mississippi after submitting their own or another staff member's telephone number as the verification telephone number for a completed NSDUH case. All cases that we were unable to verify as valid were discarded. The final resolution on the 2002 work completed by these FIs was as follows:

- 280 screenings were determined to be valid
- 134 interviews were determined to be valid
- 473 screenings were discarded
- 330 interviews were discarded

After discovering the duplicate phone number problem, we added an additional automatic check on verification data that flags any cases for which the verification phone number matches the FI's or another staff member's home or work telephone number. In addition, we began more closely monitoring the data quality of FIs who were identified as having submitted their own or another FI's phone number for verification but who gave a plausible explanation when confronted about the problem.

Table 8.1
2002 NSDUH FI Exit Interviews
Most Important Reason for Resignation

Reason for Leaving	Number of responses	Percent of responses
Some difficulty working with supervisor	11	15%
Found a new job	8	11%
Available to work, but insufficient work in the area	8	11%
Did not like the distances I had to drive to get to the sample neighborhoods	6	8%
Could not work the required hrs/week	4	5%
Lack of benefits	4	5%
Insufficient pay	4	5%
Did not like working on weekends	3	4%
Too much pressure to meet weekly production goals	2	3%
Did not like working at night	2	3%
Did not feel safe in assigned neighborhoods	2	3%
No room for advancement	2	3%
Equipment/Materials too heavy	1	1%
Did not like the subject matter of the survey	1	1%
Did not like contacting households	0	0%
Uncomfortable with computers	0	0%
No response for this question	16	22%

Table 8.2
Phone Verification Results for Non-interview Cases
2002 NSDUH

	Screening Cases Selected for Phone Verification	Results of Phone Verification of Non-interview Cases					
		No Problem		Error/Other*		Unable to Contact/Unresolved	
		Count	Percent	Count	Percent	Count	Percent
Q1	3,904	3,026	78%	259	7%	619	16%
Q2	4,353	3,458	79%	298	7%	597	14%
Q3	3,176	2,563	81%	230	7%	383	12%

Exhibit 8.1

Steps to Maximize Data Quality

Steps to Maximize Data Quality

This summary is not a replacement for information contained in your FI Manual, but is a listing of some of our most crucial protocols that must be followed.

Be sure that you follow each of these at all times.

Note the FI Manual pages referenced with each key point. Keep in mind that the below protocols are not the only steps that are necessary to follow. Use your FI Manual, Field Supervisor, and project e-mails for information on additional steps to maximize data quality.

Screening

- Use your segment maps, and not just the address, to locate your selected DUs. [FI Manual p. 3-16]
- Display your ID badge when knocking on every door in your segment. [FI Manual pgs. 4-21 and 5-1]
- Complete screenings in-person with a resident who is 18 or older. The only exception is in the case of emancipated minors. [FI Manual p. 4-22]
- Give a Study Description to each SR. [FI Manual p. 4-23]
- Obtain complete and accurate screening information, reading the screening questions verbatim to the SR and immediately entering responses into the Newton. The only missing screening data should be a result of the respondent's refusal to provide information. [FI Manual p. 6-20]

Interview

- Read the CAI Introduction and Informed Consent from the Showcard Booklet to the R (choosing the appropriate version based on the respondent's age) before beginning the interview. Before speaking with a selected minor, you must obtain verbal parental permission. If the R was not the SR, give him/her a Study Description. [FI Manual pgs. 7-24 and 7-25]
- Make it apparent that you are completing the interview in a completely confidential and unbiased manner. [FI Manual pgs. 2-7, 2-8, and 8-1]

Exhibit 8.1 (Continued)

Interview – continued

- To the extent possible, choose an interview location that gives the respondent privacy. [FI Manual pgs. 7-29 and 7-30]
- Do not rush the respondent. Do not tell the respondent how to make the interview go faster. [FI Manual p. 8-3]
- Use the Reference Date Calendar and read verbatim the explanation provided on the CAI screen to the R. As appropriate, remind the respondent to use the calendar as a visual aid throughout the interview. [FI Manual p. 8-14]
- Familiarize the R with the laptop and function keys and allow the R to successfully complete the Computer Practice on his or her own. You must always explain, offer, AND plug in the headphones with each R. [FI Manual pgs. 8-16 through 8-18]
- Read the interview questions exactly as they appear on the screen. It is never acceptable to use your own words or 'wing it'. Do not assume you know answers from a previous conversation, question, or interview. [FI Manual p. 8-2 and 8-3]
- Hand the appropriate showcard to the respondent when instructed to do so on the CAI screen. [FI Manual p. 8-13]
- Allow your respondents to complete the ACASI portion of the interview on their own. Never read the questions in the ACASI portion of the interview out loud to the respondent. In cases of extreme physical impairment, it may be necessary to enter the answers into the computer for the ACASI questions, but always allow the ACASI recording to 'read' the questions and answer categories via the headphones. [FI Manual pgs. 8-21 through 8-23]
- Have the respondent fill out the top portion of the Verification Form and allow the respondent to insert the form into the envelope and seal it. Mail the form promptly. [FI Manual pgs. 8-23 through 8-27]
- Always protect the confidentiality of your respondents. Never reveal a respondent's answers to anyone—including the respondent's family members. Resist the temptation to reveal even positive information gleaned from an interview to parents or other household members. [FI Manual pgs. 2-7 and 2-8]

C. Introduction

Hello. My name is _____ and I work for the Research Triangle Institute in North Carolina. According to our records, you have worked for us as a field interviewer on the National Survey on Drug Use and Health (formerly known as the National Household Survey on Drug Abuse). First, I just need to verify: did you recently resign? (*If "no," record comments in the space under question # 10.*)

This large national study depends on high quality field staff to gather the information. Any time one of our interviewers elects to leave the project, we are always interested in knowing why. We would like to ask you a few questions about your experience on the NSDUH and to learn why you chose to leave the project. Is now a convenient time for you? This will only take a few minutes.

[1] First, why did you resign?

[2] What could we have done to keep you as an interviewer?

[3] Did the interviewer training sessions you attended adequately prepare you for your job as an NSDUH interviewer?

[4] What areas of the training sessions could have been better?

[5] Before you began interviewing, how accurately did your Field Supervisor describe the Field Interviewing job?

- Extremely accurately
- Very accurately
- Somewhat accurately
- Not very accurately
- Not at all accurately

[6] How would you describe your working relationship with your Field Supervisor?

- Excellent
- Very good
- Good
- Fair
- Poor

[7] What can you tell me about your working relationship with your FS?

Exhibit 8.2 (Continued)

[8] Now I am going to read to you a list of reasons that an interviewer might decide to leave the NSDUH project. As you hear each one, please tell me how important it was in your decision to resign. Please rate whether it was: **Extremely important** in your decision to resign, **very important**, **somewhat important**, **not very important**, or **not at all important** in your decision to resign.

REASON		Extremely Important	Very Important	Somewhat Important	Not Very Important	Not at all Important
A	I found a new job	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
B	I didn't like the subject matter of the study	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
C	I didn't like contacting strangers	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
D	The equipment and materials we had to carry were too heavy or bulky	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
E	I didn't feel comfortable using the computers	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F	I had difficulty working with my supervisor	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
G	I was disappointed by the lack of benefits, such as health insurance	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
H	I was disappointed by the rate of pay	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I	There wasn't enough room for advancement	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
J	I didn't like working at night	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
K	I didn't like working on the weekend	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
L	I wasn't available to work the number of hours required each week	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
M	I was available but there weren't enough lines for me to work	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
N	I didn't like the continuous pressure to meet weekly production levels	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
O	I didn't feel safe in the neighborhoods I was assigned	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
P	I didn't like the distances that I had to drive to get to the sample neighborhoods	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

[9] Of all the reasons I just named, which **one** reason was **most important** in your decision to leave the NSDUH project? *(Read each of the reasons in Question 8, if necessary.)*

Item #:

Exhibit 8.2 (Continued)

[10] Is there anything else you'd like to let us know?

I want to thank you for your time. The NSDUH management staff certainly appreciate your willingness to provide answers to these questions. Have a nice day/evening.

VERSION EN ESPAÑOL AL OTRO LADO

NOTE: Public reporting burden (or time) for this collection of information is estimated to average 2 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to SAMHSA Reports Clearance Officer, Paperwork Reduction Project (0930-0110), Room 16-105, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control number for this project is 0930-0110.

OMB No.: 0930-0110
 Expires: 01-31-03

VERIFICATION FORM

As part of our quality control program, we plan to contact a portion of the survey participants to verify that the interviewer has followed the correct procedures. We only ask general questions; no specific information is required. We sincerely appreciate your cooperation.

Please complete the following items. (PLEASE PRINT CLEARLY.)

HOME TELEPHONE NUMBER: (_____) _____ - _____
 (Area Code) (Telephone Number)

YOUR ADDRESS: _____

CITY: _____ **STATE:** _____ **ZIP:** _____

To be completed by interviewer: (PLEASE PRINT CLEARLY.)

TODAY'S DATE: _____ **TIME:** _____ a.m.
 p.m.

INTERVIEWER: _____ **FI ID #**

ENGLISH VERSION ON OTHER SIDE

NOTA: Se calcula que el tiempo que le tomará a cada participante a dar esta información será 2 minutos, incluyendo el tiempo para revisar las instrucciones, buscar los fuentes de información existentes, juntar y numerar los datos requeridos, así como completar y revisar la recopilación de información. Envíe sus comentarios acerca de este cálculo de tiempo o cualquier otro aspecto relacionado con esta recopilación de información, incluyendo sugerencias para reducir el tiempo a: SAMHSA Reports Clearance Office, Paperwork Reduction Project (0930-0110), Room 16-105, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857. Ninguna agencia está autorizada a realizar o patrocinar ninguna recopilación de información sin presentar un número de control válido OMB, ni tampoco está obligada ninguna persona a participar en una recopilación de información si no existe dicho número. El número de control OMB para este proyecto es 0930-0110.

OMB Nú: 0930-0110

RESIDENT
[ADDRESS]

[DATE]

In recent weeks, RTI has been conducting a nationwide survey for the United States Public Health Service on tobacco, alcohol, and drug use. Our records indicate that a [AGE] year old [GENDER] in your household was interviewed. We would appreciate it if [HE/SHE] would take a moment to complete the following questions.

This information is only used to verify the quality of our interviewer's performance.

1. Were you interviewed in-person or over the telephone?

In-person Over the telephone

2. Approximately how long did the interview take? _____ minutes

3. Did the interviewer provide you with a laptop computer for you to enter some of your responses?

Yes

No Please explain: _____

4. Did you complete a tutorial that showed you how to enter your responses in the computer?

Yes No

5. Did you have the option of listening to the questions through a set of headphones?

Yes No

6. Were you paid for your participation?

Yes No

If yes, how much were you paid? \$ _____

7. Was the interviewer professional and courteous?

Yes

No Please describe how our interviewer could improve his/her behavior: _____

A stamped, pre-addressed envelope is enclosed for your convenience in returning this form. Thank you for your cooperation.

Sincerely,

David Cunningham
National Field Director

Short FI Level Verification Report Problem Codes

Code 70 Problems

- 1 Incorrect phone number for address
- 2 Correct address/phone but R unknown
- 3 Roster Incorrect
- 4 Correct address/phone but no adult to give permission to speak with teen R
- 5 Not contacted by FI
- 6 Did not complete interview
- 7 Interview completed some other way (not in person or by phone)
- 8 Interview completed by phone
- 9 Option not offered to enter answers in computer
- 10 Tutorial not completed
- 11 No headphone option
- 12 FI unable to assist when R had difficulties with computer
- 13 Less than 25 minutes
- 14 Less than 25 minutes and No option given to enter answers in computer
- 15 FI told R how to make the CAI go faster (e.g. answer “no,” “refuse,” or just answer without reading)
- 16 R was offered or paid something for participation
- 17 FI Not Professional

Code 30 Problems

- 30 R unknown and not correct phone number for the SDU OR incorrect phone number for the SDU
- 31 Correct Roster and Address, but SR Unknown
- 32 Does not remember FI – Correct Address but Roster Incorrect
- 33 Does not remember FI – Wrong Address but Correct Roster
- 34 Does not remember FI – Wrong Address and Incorrect Roster
- 35 Does not remember FI – Refused to verify Address and Roster
- 36 Remembers FI – Correct Address but Roster Incorrect
- 37 Remembers FI – Wrong Address but Correct Roster
- 38 Remembers FI – Wrong Address and Incorrect Roster
- 39 Remembers FI – Refused to verify Address and Roster
- 40 Telephone Screening
- 41 Screening completed some other way (not telephone or in person)
- 42 FI wrote screening data on paper (not entered in Newton) at time of screening
- 43 FI Not Professional

Short FI Level Verification Report Problem Codes

Code 22 Problems

- 50 No known contact with FI
- 51 Speaking to SR, not familiar with address
- 52 Refuses to verify address and screening data
- 53 All HH members not on active military duty
- 54 Telephone screening
- 55 Contact some other way (not in person or telephone)
- 56 FI wrote screening data on paper (not entered in Newton) at time of screening
- 57 FI Not Professional

Code 10, 13, 18, 26 Problems

- 60 No one familiar with the address
- 61 Speaking to SR and no FI contact
- 62 Code 10 – reported as not vacant at time of screening
- 63 Code 13 – reported as primary place of residence for the quarter
- 64 Code 18 – reported as a DU
- 65 Code 26 – reported by resident someone did live there for most of the quarter
- 66 Code 26 – reported by non-resident someone did live there for most of the quarter
- 67 Refused to verify address or screening data
- 68 FI wrote screening data on paper (not entered in Newton) at time of screening
- 69 FI Not Professional

Appendix A

New-to-Project Home Study Cover Memo

This page intentionally left blank.

TO: New-to-Project Field Interviewers
FROM: David Cunningham, National Field Director
SUBJECT: Home Study Package for the 2002 NSDUH Field Interviewer Training Session

Welcome to the 2002 National Survey on Drug Use and Health (NSDUH). We are pleased to have you working with us on one of our country's most important studies.

Enclosed are all of the materials you need to prepare successfully for your upcoming Field Interviewer (FI) training session. This home study training package includes several important components. **Please try to complete all parts of this home study package within five (5) days of receipt.** This will help us ensure that everyone has all of the materials needed prior to training.

The specific items you should have received in this package are:

- **This Cover Memo:** with specific instructions on how to complete your home study materials
- **2002 NSDUH FI Manual:** a 3-ring binder containing project-specific information you will need to complete your NSDUH assignment. Also included in this binder is the FI Computer Manual (see next item).
- **2002 NSDUH FI Computer Manual:** covers how to use and care for your Newton handheld computer and Gateway laptop. The computer manual is included in the 3-ring binder, but it is bound separately so you can remove it from the binder and carry it with you in the field. You will receive your computer equipment shortly after you arrive at your training site.
- **Home Study Exercises:** There are two sets of exercises: one covers information in the FI Manual and one covers information in the FI Computer Manual. It is required that you complete these exercises and bring the completed home study with you to training. You will turn them in at training registration. Please be sure that both home study exercises are complete and ready to submit when you arrive at registration.

There is a precise order in which we need you to complete this home study package.

The order in which you are to complete this home study package is:

- ① Read this memo in its entirety.
- ② Carefully review the NSDUH FI Manual, and the NSDUH FI Computer Manual. These two manuals are most effective when reviewed together, according to the following order:

	FI Manual		FI Computer Manual
<i>Read First:</i>	Chapters 1 & 2	<i>then</i> ➡	Chapters 1, 2 & 3
<i>Read Second:</i>	Chapters 3, 4, 5 & 6	<i>then</i> ➡	Chapters 4 & 5
<i>Read Third:</i>	Chapters 7 & 8	<i>then</i> ➡	Chapter 6
<i>Read Fourth:</i>	Chapters 9, 10 & 11	<i>then</i> ➡	Chapter 7 & 8
<i>Read Fifth:</i>	Chapter 12		

- ③ Complete the Home Study Review Questions from the FI Manual and the FI Computer Manual. Bring the completed review questions with you to training.

Below are additional details on the homestudy process and your upcoming training session.

The home study process is considered to be mandatory supplemental training, i.e. preparatory training for your attendance at the FI training session. While at training, there also will be a number of evening “study halls” to offer trainees additional review, assistance and practice with whatever topics were covered during the training day. In the interest of strengthening your skills, your trainers may request that you attend one or more study halls. If they do not, however, you always will be welcome to attend if you would like more practice with the study materials and equipment.

- ▶ Every FI will be required to undergo a certification at the end of training. This certification will ensure that all graduating FIs understand the project procedures.
- ▶ Because of the importance we attach to these non-classroom training activities, we will compensate you for the time spent on the extra-training (home study, study halls, and certification). The check you will receive for attending training will include payment for 16 hours of additional, non-classroom training time (that is, in addition to the payment you will receive for regular classroom time while at training).
- ▶ We are paying you for these extra-training activities because your mastery of NSDUH procedures and protocols is crucial to the success of the project. Careful completion of the home study exercises, participation in the study halls, and successful completion of the project certification will ensure that you are able to complete your assignment successfully.

► **To review, there are a several important things you must do prior to arrival at training:**

- (1) Complete this home study exercise, in its entirety. **All review questions (FI Manual and FI Computer Manual) must be completed and brought to training.**
- (2) In order to transmit your completed data to RTI each evening from your home, it will be necessary to suspend any "call-waiting" options you have on your phone service while the transmission is taking place. Our Technical Support Staff can pre-set your computer to do this automatically, but to do so they will need to know your access code. So, you must be sure to **bring your call-waiting disabling code (e.g., *70, or #70, etc.) with you to training.**
- (3) In addition to some of the items already noted, there are other specific project materials you must bring with you to training. **The list below is designed so that you can check off items as you pack for training:**

✓	Items You <u>Must</u> Bring to Training
	2002 NSDUH FI Manual
	2002 NSDUH Computer Manual
	Completed Home Study Review Questions <input type="checkbox"/> <i>FI Manual Questions</i> <input type="checkbox"/> <i>Computer Manual Questions</i>
	Signed Last Page of FI Handbook (sent by Headway in a separate shipment)

- ▶ When you arrive at the hotel for training, you should:
- ▶ Upon arrival at the hotel, go to the front desk to register for your room. Ask the front desk the location of the *NSDUH Welcome Center* where you will need to check in with the project staff once you have checked in to your room. **Be sure you have your completed home study and a photo ID (i.e., driver's license) with you when you go to the NSDUH Welcome Center.**

You will complete the following registration activities at the NSDUH Welcome Center:

- **turn in all of your completed home study review questions**
 - **complete any necessary administrative forms**
 - **have your photo taken for your ID badge**
 - **receive information about the training schedule and the location of the training session beginning the next day at 8:15 a.m. and ending at approximately 5:00 p.m.**
- ▶ Keep in mind that it is often difficult to regulate the heating/cooling in training rooms to everyone's satisfaction. Bring a light jacket or sweater so that you are better able to control your personal comfort.

Now that you have read this memo in its entirety, you may proceed with step 2, your review of the **FI Manual** and **FI Computer Manual**.

If you have any questions about the information contained in this home study package, or any other project-related questions, please contact your Field Supervisor.

Good luck, and we look forward to seeing you at training!

Appendix B

New-to-Project Home Study Exercises

This page intentionally left blank.

FI NAME: _____

FS NAME: _____

2002 National Survey on Drug Use and Health

HOME STUDY EXERCISE: FI MANUAL

DIRECTIONS: Be sure to read each question carefully, then answer each question. You will need to complete both Home Study Exercises—one for the FI Manual and one for the FI Computer Manual. Remember to bring both completed home studies with you to your training site.

1. The agency sponsoring the survey is:
 - a. National Center for Health Statistics
 - b. National Institute on Drug Abuse
 - c. Substance Abuse and Mental Health Services Administration
 - d. Food and Drug Administration

2. Which of the following is **NOT** a goal of the NSDUH:
 - a. To track trends in the use of alcohol, tobacco products, and various types of drugs
 - b. To provide accurate data on the level and patterns of licit and illicit drug use
 - c. To identify groups at high risk for drug abuse
 - d. To assess the consequences of drug use and abuse
 - e. To track an individual's patterns of drug use over time

3. If you don't finish Quarter One assignments by the end of Quarter One, you must continue working on them during Quarter Two.
 - a. True
 - b. False

4. For the Quarter Two data collection period, what date is the goal to complete your screening and interviewing assignment? HINT: This would allow you one month to complete any clean-up.

5. What is the number of hours per week you should be available to conduct screening and interviewing during the data collection period?
_____ hours

6. Match these National Survey on Drug Use and Health (NSDUH) abbreviations correctly:

- | | | |
|-----------|----|---|
| ___ DU | a. | Computer-Automated Interviewing |
| ___ DHHS | b. | Record of Calls |
| ___ ACASI | c. | Public Health Survey |
| ___ HU | d. | Group Quarters Unit |
| ___ CAPI | e. | Department of Health Services |
| ___ ROC | f. | Dwelling Unit |
| ___ CAI | g. | Computer-Assisted Personal Interviewing |
| ___ GQU | h. | Audio Computer-Assisted Self-Interviewing |
| ___ PHS | i. | Screening Respondent |
| ___ SR | j. | Department of Health and Human Services |
| | k. | Housing Unit |
| | l. | Public Health Service |
| | m. | Computer-Assisted Interviewing |
| | n. | Survey Respondent |
| | o. | Record of Contacts |

7. Which of the following is your responsibility in the screening and interviewing process?

- a. Mailing a lead letter to each selected dwelling unit that has a mailable address
- b. Locating (using the segment materials) and contacting a sample dwelling unit
- c. Obtaining informed consent from a respondent (gaining permission from a parent/guardian before approaching a youth respondent)
- d. Transmitting the data to RTI on a daily basis
- e. All of the above
- f. a. and b. only
- g. b., c., and d. only

8. One very important requirement of your job is the proper treatment of the data, that is, keeping data completely confidential. Which information must you keep confidential?

- a. Answers provided during screening
- b. Answers provided during the interview
- c. Observed information from before the interview
- d. Observed information during or after the interview
- e. a. and c. only
- f. Any and all information you learn about the respondents

9. A. _____ are groups of rooms or single rooms occupied or intended for occupancy as separate living quarters.
- B. _____ are generally any single living unit in which ten or more unrelated persons reside.

10. What information does the Selected Dwelling Unit List provide?
- Telephone numbers for all selected respondents
 - A list of housing units and group quarters units selected in the segment
 - A list of all of the housing units and group quarters units found in the segment
11. What is the Block Listing Map used for?
-
-
12. Put an "X" on the line next to the dwelling units that are **NOT** eligible for the NSDUH.
- Single houses in a subdivision
- Military family housing
- Military barracks
- Sororities and Fraternities
- Homeless shelters
- Retirement residences
- Nursing homes
13. Which of the following information is included on the Newton's **Select Case** screen?
- the RTI case identification number, referred to as the "Case ID number"
 - the street address, or a physical description of the HU or GQU and its general location
 - the number of residents of the HU or GQU
 - all of the above
 - a. and b. only
14. When do you make an entry in the Record of Calls?
- Each time you discuss the SDU with your FS
 - Each time you think about visiting the SDU
 - Each time you attempt to contact the SDU
 - Each time you actually speak with someone at the SDU
 - a., c., and d.
 - c. and d.
15. Name two productive time frames during which to visit SDUs.
-
-

16. Match the screening result code with the correct definition.

- | | | |
|--------|----|---------------------------------------|
| ___ 02 | a. | Vacant SDU |
| ___ 05 | b. | Not a dwelling unit |
| ___ 10 | c. | One selected for interview |
| ___ 11 | d. | No one at DU after repeated visits |
| ___ 18 | e. | Language barrier - Spanish – pending |
| ___ 31 | f. | Screening respondent (SR) unavailable |

17. Which of the following screening result codes needs your FS's approval?

- a. 01 - No one at DU
- b. 07 - Refusal to screening questions
- c. 21 - Denied access to the building/complex
- d. 30 - No one selected for interview
- e. 26 - Not a resident in DU for most of the quarter

18. Who is an eligible screening respondent for the NSDUH?

- a. Any resident of the DU
- b. Any adult [age 18 or over] who answers the door
- c. An adult (age 18 or over) resident of the DU
- d. Anyone that lives on the street

19. You must always wear your RTI photo ID badge when working on the NSDUH in the field.

- a. True
- b. False

20. List two steps you can take to reduce refusals.

- 1) _____
- 2) _____

21. The screening process includes questions about:

- a. The number of people 12 and over who live there for most of the quarter
- b. The correct address
- c. The number of residents in the household who take licit and illicit drugs
- d. Age, relationship, gender, Hispanic origin, race, and military status
- e. Missed dwelling units
- f. b. and c.
- g. a., b., d., and e.

22. The **Actions** button displays a list of functions that can be applied to a **specific** case, whereas the **Admin** button, when tapped, lists functions that are **not** associated with a specific case.
- True
 - False
23. Who **should** be included on the household roster when screening?
- Persons under the age of 12 at the time of screening
 - Persons who are institutionalized at the time of screening
 - Persons who will not live at the SDU for most of the time during the quarter
 - All of the above.
 - None of the above.
24. It is possible for the HU screening process to identify:
- One eligible housing unit member
 - Two eligible housing unit members
 - No one eligible in the housing unit
 - Either a., b., or c.
25. What is the name of the Newton screen that you should have ready when you approach the dwelling unit?
-
26. You must give a Study Description to every Screening Respondent while reading the Informed Consent screen on the Newton.
- True
 - False
27. You should always attempt to complete the NSDUH interview:
- Immediately after screening.
 - At a later date, to give the respondent time to prepare.
 - With other household members in the same room, so the respondent feels more at home.
 - With a parent or guardian in the same room for minor respondents.
 - In complete privacy.
 - a. and d.
 - b. and c.
 - a. and e.

28. A good response to a parent who hesitates to let his child participate in the study because he thinks his child has not used drugs is to say:
- a. "I'll mail you a copy of your child's answers so you can discuss them together."
 - b. "If your child turns out not to use drugs, we'll throw the data out."
 - c. "Your child looks like he has had plenty of experience using drugs. I'm sure he'll be a great respondent!"
 - d. "There are other topics included besides drugs. Knowing the opinions and experiences of your child is important as well."
29. In the CAI questionnaire, all upper- and lowercase text in parentheses is always to be read to the respondent.
- a. True
 - b. False
30. If a respondent doesn't understand a question, you should rephrase it in your own words until the respondent comes up with an answer.
- a. True
 - b. False
31. Which of the following is not an acceptable probe?
- a. To repeat the question
 - b. To pause
 - c. To repeat the answer choices
 - d. To suggest answers
 - e. To use neutral questions or statements
32. Respondents will be offered a cash incentive of \$30 for completing the entire interview.
- a. True
 - b. False
33. What is the **minimum** number of times you are **required** to report to your FS by phone?
- a. At least twice per week
 - b. At least twice per month
 - c. At least once per week
 - d. At least once per month
34. What is the deadline to transmit your PT&E summary data from your Newton?
-

35. On a weekly basis, you should transmit your ePTE, mail your completed reference date calendars, and mail your completed Verification Forms to your FS.

- a. True
- b. False

36. For certain final **non-interview** screening codes, you are required to obtain verification information about the contact person. What is the information you are to record?

37. What time period does the ePTE cover?

- a. 2-week period
- b. 1-day period
- c. 1-week period

Questions 38-40: Described below are three typical (or not so typical) scenarios. The fourth scenario is a Brain Teaser and will not count in your score. Read the scenarios and use your FI Manual index to look up the category in which you think you will find the answer you need. When you find the answer in the index, write the correct page number on the line below. Then, using the information you find in your manual, answer the question.

38. It's Saturday afternoon and you are completing your ePTE report to transmit to your FS. You cannot recall when you have to transmit the completed report to your FS in order to get paid. You don't want to bother your FS with this question, so you pull out your trusty FI Manual and look in the index...

A. WHAT PAGE OR APPENDIX IS REFERENCED IN THE INDEX? _____
(PLEASE NOTE PAGE NUMBER, NOT NUMBER OF THE SECTION ON THE PAGE.)

B. QUESTION: When do you have to transmit your ePTE to your FS in order to get paid on schedule?

39. You've had several refusals lately. Most of the refusal reasons seem to be that respondents are too busy to do even the screening. You've talked with your FS who has suggested that you read through some of the refusal letters to get some ideas on things to say when respondents refuse to participate. You remember that copies of the refusal letters are found in your FI Manual, but you don't recall where. So you pull out your trusty FI Manual and look in the index...

A. WHAT PAGE OR APPENDIX IS REFERENCED IN THE INDEX? _____
(PLEASE NOTE PAGE NUMBER, NOT NUMBER OF THE SECTION ON THE PAGE.)

B. QUESTIONS:

1) What is the title of the letter you should read to get some suggestions?

2) What is one statement or idea that you can communicate to a respondent who claims to be too busy to do the screening?

40. You are about to interview in a neighborhood where many college students live on their own, including some who are not 18 years old yet. Before you go out to the field, you want to review the rules for determining who counts as an emancipated minor and when permission is needed. You remember that there is something about this in the manual, but you just can't put your finger on it. So you pull out your trusty FI Manual and look in the Index.

A. WHAT PAGE OR APPENDIX IS REFERENCED IN THE INDEX? _____
(PLEASE NOTE PAGE NUMBER, NOT NUMBER OF THE SECTION ON THE PAGE.)

B. QUESTION: Does completing an interview with a 17-year-old college student living in an apartment require permission from a parent or guardian?

☆ **BRAIN TEASER:** (This question will not be counted; but try to answer it anyway!)

You were out in the field earlier today and encountered a missed DU: you discovered a newly-built home, next to a house you screened. This new home was not listed in your Newton. You recorded the address of the new house as a possible missed DU; but could not reconcile the missed DU because you had to get to an interview appointment. It is now evening and you are at home. You want to reconcile that dwelling unit; but you can't remember the procedures. So, you pull out your trusty FI Manual and look in the index...

A. WHAT PAGE OR APPENDIX IS REFERENCED IN THE INDEX? _____
(PLEASE NOTE PAGE NUMBER, NOT NUMBER OF THE SECTION ON THE PAGE.)

B. QUESTION: In the scenario described above, you followed all of the procedures described and found that the home was not listed on the list of dwelling units and that it was in the geographic interval between the SDU and the next listed line.

Was this new home added to your caseload? _____

Appendix C

Veteran Home Study Cover Memo

This page intentionally left blank.

DATE: December 4, 2001

TO: 2002 National Survey on Drug Use and Health Field Interviewers

FROM: David Cunningham, National Field Director

SUBJECT: Home Study Package for the 2002 NSDUH Veteran Field Interviewer Training Session

Welcome to the 2002 National Survey on Drug Use and Health. That's right—we have a new survey name this year! We are pleased to have you working with us again in 2002 on one of our nation's most important studies.

Enclosed are materials you need to successfully prepare for your upcoming training session in January. This is a comprehensive home study training package with instructions regarding materials that must be reviewed before training as well as other preparations that must be completed before departing for the training session.

Please complete all parts of this home study package within seven (7) days of receipt. Along with this memo, you should have received the 2002 NSDUH FI Manual (shrink-wrapped with a purple cover) and the 2002 FI Computer Manual (a purple tape-bound manual). Please remove last year's 2001 FI Manual pages from your 2001 FI Manual binder and insert the new 2002 FI Manual pages, cover, and spine label.

If you did not receive one or more of these items, please contact your FS immediately. This will help us ensure that everyone has all of the materials and equipment needed prior to training.

This year, you will be completing the home study electronically using your Gateway laptop. You will be able to input answers to the home study questions directly into the laptop and transmit your answers to RTI. It is important that you review the 2002 FI Manual and 2002 FI Computer Manual before answering the questions in this assignment. The home study questions will cover the changes for the 2002 study and will review some of the current procedures that will continue into next year. The majority of the questions test your knowledge of basic procedures that must be followed to collect data that is of high quality.

You do not need to finish the home study in one sitting—you can perform a break-off to exit the home study and re-enter as many times as you wish. When you re-enter the home study, you can review and change your responses. When you are ready to transmit, answer YES to question number 23 and your home study will be ready to transmit. **The CAI home study will be available on the Gateway at the CAI Manager screen starting December 4th, 2001 at NOON. The home study will be due back at RTI (via transmission) by 12:00 AM (MIDNIGHT) EST December 11th, 2001.**

In addition to this cover memo, the contents of this package include:

Computer Equipment ID List	These “picture ID” cards are provided simply to help you identify and locate the various components associated with your laptop computer and Newton that you must bring with you to your training site.
2002 NSDUH FI Manual	This manual documents all of the project-specific information you need to successfully complete your assignment. All newly added text for 2002 is highlighted in grey.
2002 NSDUH FI Computer Manual	This manual focuses on the specifics associated with use of and care for the Gateway laptop computer and the Newton handheld computer. The Computer Manual is included with your FI Manual and is bound separately so that you can easily carry it with you in the field. All newly added text for 2002 is highlighted in grey.

There is a precise order in which this home study package should be completed.

- 1) Read this memo all the way through. This memo provides you with information about what to bring with you to training, as well as instructions on how to complete the home study exercises. **Please read this entire memo carefully.**
- 2) Transmit after NOON EST on December 4th to pick up the home study and carefully review the 2002 NSDUH FI Manual, and the 2002 NSDUH FI Computer Manual—focusing on the highlighted changes.
- 3) Complete the FI Home study electronically on your Gateway laptop. The home study will be due back at RTI (via transmission) by 12:00 AM (MIDNIGHT) EST December 11th, 2001.

Before you depart for training:

- 4) Complete the checklist (page 5) for your computer equipment, ensuring that you have all the equipment that is listed. **You will need to turn in the checklist at registration** with your laptop computer and Newton.

You must bring your Newton and laptop with you to the Veteran FI Training Session in January. If you fail to arrive at the training session with your Newton and laptop, you will be sent home from training and terminated from employment on the NSDUH.

- 5) Before leaving for training, make sure your Newton and laptop computer batteries are fully charged. This makes it possible for Tech Support to update your computers with the 2002 versions of the programs easily and quickly without having to recharge the batteries.

That concludes the step-by-step review of completing the enclosed home study materials. However, there are a few additional items to review prior to your arrival at training.

- ▶ The home study process is mandatory supplemental training, i.e. it is preparatory training for your attendance at the regional FI training session. We will compensate you for the time spent on the extra-training (material review and home study exercises). You may record **up to 6 hours** on an ePTE. This ePTE can be submitted as soon as you complete the work. Time for this effort must be recorded on a separate ePTE and charged to **7190-452**.
- ▶ **Please note that the successful completion of the home study is necessary in order to attend the Veteran Training in January and continue as a Field Interviewer on this project.** Any Field Interviewer who does not achieve a score of 80% on this home study will be required to complete an additional home study exercise administered over the phone by an RTI project member. Any FI who does not achieve a score of 80% on the phone home study will be released from the project and not be allowed to attend Veteran Training or continue working in 2002 as a Field Interviewer on this project. Keep in mind that this is an open book test. You can use any of your project materials—including your new 2002 manuals—to answer these questions.
- ▶ If you are flying to training, please use extreme caution while transporting the computer. You must carry the laptop and Newton onto the plane with you; never check them through with baggage. Also, be very careful to keep the computer close to you at all times, especially when going through airport security.
- ▶ Upon arrival at the hotel, go to the front desk to register for your room. Determine the location of the *NSDUH Welcome Center*, and go there next. **Be sure you have your laptop and Newton with you when you go to the NSDUH Welcome Center along with your completed checklist.**

- ▶ To repeat, you **must** bring your Newton and laptop with you to the Veteran FI Training Session in January. RTI Technical Support Staff will give you a receipt and keep your computers to load the 2002 versions of the programs for you. Your equipment will be returned to you later in the training session.
- ▶ You will complete all registration activities at the *NSDUH Welcome Center*. You will complete any necessary administrative forms, have your photo taken for your ID badge, and be given a voucher for your meal allowance money. You will redeem the voucher for cash at the hotel's front desk. You will receive information about the training schedule and the location of your training room. Finally, you will receive your Certification Appointment card, detailing the time and location of your scheduled certification (see below).
- ▶ You will be required to pass a certification on your screening and interviewing skills as well as your knowledge of the study and protocols. The certifications will take place on your travel day after you complete registration. Your certification will take approximately 30 minutes, and will consist of a screening and transition to the beginning portion of an interview. You will be certified using the same 2001 Newton and CAI program you have used all year so there will be no surprises. Please **bring one copy of each of the 2001 materials you would use to conduct a screening and interview** to your certification appointment.
- ▶ Everyone should re-read the *Steps to Maximize Data Quality* before coming to training. Being familiar with its contents will aid you in successfully completing the home study and the certification.
- ▶ The 2-day training session will begin on Day 1 promptly at 8:15AM. There will be a session on the evening of Day 1 from 7PM to 9PM.
- ▶ Keep in mind that it is often difficult to regulate the heating/cooling in training rooms to everyone's satisfaction. Bring a light jacket or sweater so that you are better able to control your personal comfort.

If you have any questions about the information contained in this home study package, or any other project-related questions, please contact your field supervisor.

Thank you for your attention to these details. Good luck, and we look forward to seeing you at training!

Enclosures

✓	Items You <u>Must</u> Bring to Training
	2002 NSDUH FI Manual
	2002 NSDUH FI Computer Manual
	A copy of each of the materials you would use to conduct a screening and interview
	Gateway Laptop Computer, <u>with the battery fully charged</u> , with all necessary components listed below (and pictured or described on page 6):
	<ul style="list-style-type: none"> <input type="checkbox"/> Laptop computer carrying case <input type="checkbox"/> AC adapter and associated power block and power cord <input type="checkbox"/> Headphones <input type="checkbox"/> Modem card (should be in the laptop) <input type="checkbox"/> Air drive (Filler drive installed in the laptop) <input type="checkbox"/> CD-ROM drive (if still checked out to you) <input type="checkbox"/> Floppy disk drive (if still checked out to you) <input type="checkbox"/> Completed <i>NSDUH Equipment Agreement & Receipt Form</i> (yellow copy)
	Newton handheld computer, <u>with the battery fully charged</u> , with all necessary components listed below (and pictured or described on page 6):
	<ul style="list-style-type: none"> <input type="checkbox"/> Newton carrying case <input type="checkbox"/> Rechargeable battery pack <input type="checkbox"/> AC adapter / power cord <input type="checkbox"/> Modem card (should always remain in the Newton) <input type="checkbox"/> Flash card (should always remain in the Newton) <input type="checkbox"/> Newton pens

EQUIPMENT ID LIST FOR THE GATEWAY LAPTOP		
	Gateway Laptop Computer and Carrying Case	The Gateway laptop computer is the computer used to administer the computerized interview. Use the black briefcase to carry.
	Laptop AC adapter (includes power block and power cord)	The laptop AC adapter allows you to plug the computer into an electrical socket to power the computer. The battery is also charged using the laptop AC adapter. You must plug the computer into an electrical socket for several hours to charge the battery.
	Headphones	Headphones are used by the respondent during the self-administered portion of the interview. They help to protect the respondent's privacy by keeping others from hearing the questions being asked.
EQUIPMENT ID LIST FOR THE NEWTON		
	Newton in carrying case	The Newton is a small handheld computer used to screen dwelling units. Use the special gray case designed for NHSDA to protect the Newton from damage during transport and daily use.
	Newton with rechargeable battery pack	The rechargeable battery pack is inserted in the Newton to provide battery power for about 10 hours each time it's charged.
	Newton AC adapter / power cord	The Newton's AC adapter allows you to plug the Newton into an electrical socket to recharge the battery pack.

2002 NSDUH Veteran Training ***FI Home Study***

Welcome to the 2002 NSDUH Home Study!

To help you prepare for the upcoming training and 2002 study year, you will need to complete this home study assignment, which has been specially prepared for our Veteran interviewers. It is important that you review the 2002 FI Manual and 2002 FI Computer Manual before answering the questions in this assignment. The home study questions will cover the changes for the 2002 study, as well as review some of the current procedures that will continue into next year.

PRESS ENTER TO ADVANCE TO THE NEXT SCREEN.

Please note that the successful completion of this home study is NECESSARY in order to attend the Veteran Training in January and continue as a Field Interviewer on this project. The majority of these questions test your knowledge of basic procedures that must be followed to collect data that is of high quality.

Any Field Interviewer who does not achieve a score of 80% on this home study will be required to complete an additional home study exercise administered over the phone by an RTI project member. Any FI who does not achieve a score of 80% on the phone home study will be released from the project and be unable to attend Veteran Training or continue working in 2002 as a Field Interviewer on this project. **These stringent requirements have been put into place due to the seriousness in which we view your adherence to our project protocols.**

Keep in mind that this is an open book test. You can use any of your project materials—including your new 2002 manuals—to answer these questions. We sincerely expect EVERY FI to achieve a score of at least 80%—with most FIs scoring a perfect 100%.

PRESS ENTER TO ADVANCE TO THE NEXT SCREEN.

This home study is designed to be similar to a CAI Interview. For each question, you will enter in the number for the correct answer and press ENTER to advance to the next screen. If you need to back-up to look at earlier screens, press F9 just like you would in an interview.

You do NOT need to finish the home study in one sitting—you can perform a break-off to exit the home study and re-enter as many times as you wish. When you re-enter the home study, you can review and change your responses, as well as press F6 to jump to the next unanswered question.

When you are completed with the home study and do not want to make any more changes, answer YES to question number 23 and your home study will be ready to transmit.

For each question, there is only one correct answer.

This Home Study will be due back at RTI (via transmission) by MIDNIGHT (12:00 AM EST) December 11, 2001.

We look forward to seeing all of you at the Veteran Training in January!

PRESS ENTER TO ADVANCE TO THE NEXT SCREEN.

- Q1. In 2002, why was the survey name changed from the National Household Survey on Drug Abuse (NHSDA) to the National Survey on Drug Use and Health (NSDUH)?**
1. The name change more accurately reflects the survey's interest in the effects of drug use on user's mental health and overall health
 2. The term "abuse" was eliminated from the title to project a more positive, inclusive tone since researchers need to know the experiences of users and non-users, not just those who might abuse drugs
 3. 1 and 2
 4. Neither of the above
- Q2. What is the project number for Screening and Interviewing for 2002?**
1. 7190-360
 2. 7190-451
 3. 7190-460
 4. 7190-461
- Q3. Before beginning the interview you should:**
1. Choose an interview location that gives the respondent privacy
 2. Read the informed consent from the Showcard Booklet to the respondent
 3. Be sure you are using the correct QuestID for the respondent you are interviewing by checking the respondent selection screen in your Newton
 4. All of the above
- Q4. You should hand the respondent the appropriate numbered showcard:**
1. Only if the respondent asks you for one
 2. When the computer prompts you to do so
 3. Before you begin the interview
- Q5. You should hand the respondent the appropriate lettered pillcard:**
1. Only if the respondent asks you for one
 2. When the computer prompts you to do so
 3. Before you begin the interview
- Q6. When completing the CAPI portion of the interview with a second selected respondent in a household you should:**
1. Record the information you recall from the previous interview without asking the same questions again (i.e., income and health insurance questions)
 2. Read all interview questions exactly as they appear on the screen
 3. Put the questions in your own words
 4. Ask the respondent if his/her answers would be the same as the answers for the first interview
- Q7. You should familiarize the respondent with the laptop and function keys and allow them to complete the computer practice on their own:**
1. Only if they are not familiar with computers
 2. If they ask you for a lesson
 3. When prompted to do so by the computer
 4. 1 and 2 only

- Q8. When is it appropriate for you to share information revealed to you by a respondent?**
1. If the information is positive
 2. If the parent/guardian of the respondent asks you for information revealed during the interview
 3. When you are discussing the household with strangers
 4. Never
- Q9. What do you do at the Verify Data Screen in the Newton Screening Program?**
1. Double check that all data fields are completed on the chart for each household member, unless refused by the respondent
 2. Read the ages and relationships of the rostered HH members on the screen to remind the respondent who was listed before reading the two global occupancy questions
 3. Read all data fields to the respondent to ensure the information collected is correct
 4. 1 and 2 only
 5. 1 and 3 only
- Q10. Which of the following is **not** a rule for administering the CAPI portion of the NSDUH interview?**
1. Ask the question using the exact words on the screen
 2. Read the complete question
 3. Read the questions quickly
 4. Avoid suggesting answers to the respondent
- Q11. **Before** administering each interview, you are responsible for giving a cash incentive to each respondent.**
1. True
 2. False
- Q12. **Only** when the respondent is severely physically impaired are you permitted to enter a respondent's answers into the ACASI portion of the interview for him/her.**
1. True
 2. False
- Q13. For the 2002 NSDUH, you will no longer be prompted to enter a mode of contact at the Screening and Interview Result Code screens in the Newton.**
1. True
 2. False
- Q14. The deadline for transmitting weekly ePTE information to RTI is on Monday at Midnight EST.**
1. True
 2. False
- Q15. Respondents will be offered a cash incentive of \$30 for completing the entire interview.**
1. True
 2. False

- Q16. When locating an SDU, you should use the address to determine the location without referencing your segment maps.**
1. True
 2. False
- Q17. You should always complete the screening in-person with a resident 18 or over unless the respondent is an emancipated minor.**
1. True
 2. False
- Q18. The reference date calendar should be given to the respondent but **not** explained.**
1. True
 2. False
- Q19. You should have the respondent fill out the top portion of the verification form and allow the respondent to insert the form into the envelope and seal it.**
1. True
 2. False
- Q20. You must always plug in and offer the headphones to each respondent.**
1. True
 2. False
- Q21. The race question allows for multiple entries. You must read the entire question so that the respondent hears all the choices. You must then check all the choices which the respondent tells you.**

Verification Scripts

This page intentionally left blank.

Verification Script for Code 70

General Information:

All skips or routing instructions to be programmed are noted next to response in brackets []

All fills are designated by italics text in parens (*address*)

(*FI Pronoun*): he/she based on FI's gender

(*FI Description*): age, gender, height, race

Program fill for past or future tense as follows:

Use the first portion of the fill (***will live/lived***)

If Qtr 1 and call is before Feb 15, else use second portion

If Qtr 2 and call is before May 15, else use second portion

If Qtr 3 and call is before August 15, else use second portion

If Qtr 4 and call is before November 15, else use second portion

Program fill for (*3-month quarter field period*)

Qtr 1= January, February, March

Qtr 2= April, May, June

Qtr 3= July, August, September

Qtr 4 = October, November, December

Screening Date fill: Date of final Screening Code

(*Roster Data*): age, gender, race for each HH member

(*Screening Date*) fill: Date of final Screening Code

(*teen demo*): demographic data for teen respondent - age, gender. If no gender, use "youth"

(*adult demo*): demographic data for adult respondent - age, gender. If no gender, use "person"

(*teen pronoun*): his/her fill for teen respondent

(*relationship to R*): Relationship to Respondent from Verification Form for age 12-17 (Adult who gave permission for youth to complete the interview. If "relationship to R" is missing, the word choice after the / will appear.

Screening Information Provided for Codes 70:

CaseID
Phone number (designates home or work phone)
Address
Notes to Verification Caller [Additional data from Newton]
First Name
Demographic data for respondent
Relationship to Respondent (from Verification Form) if R is 12-17
Code 32 info: If a code 32, demographic data for both respondents
(to use on help screen)

Screening Script:

>UNDR18AA<

In recent weeks, our research organization called RTI has been conducting a nationwide survey sponsored by the U.S. Public Health Service. We are making a quick call to residences that were contacted to verify the quality of our interviewer's performance. This will take less than two minutes of your time.

Our records indicate that a (*teen demo*) in your household was interviewed and that (*teen's relationship to R /an adult*) granted permission for this youth to complete the interview. May I please speak to (*the relationship to R/an adult in the household?*)?

<1> YES, ADULT IS AVAILABLE [UND18B1A]
<2> ADULT UNAVAILABLE [CALLBACK]
<3> ADULT UNKNOWN [NOADULTA]

>UND18B1A<

IF YOU ARE SPEAKING WITH THE CORRECT ADULT, CONTINUE WITH THE SECOND PARAGRAPH OF THIS INTRODUCTION ON THE NEXT SCREEN. IF NOT, ONCE YOU ARE CONNECTED WITH THE CORRECT ADULT, RE-INTRODUCE YOURSELF BEGINNING WITH THE FOLLOWING PARAGRAPH.

I'm calling from a research organization called RTI located in North Carolina. In recent weeks, we have been conducting a nationwide survey sponsored by the U.S. Public Health Service. We are making a quick call to residences that were contacted to verify the quality of our interviewer's performance. This will take less than two minutes of your time. Our records indicate that a (*teen demo*) in your household was interviewed and that (*teen pronoun + relationship to R/someone*) granted permission for this youth to complete the interview.

ENTER 1 TO CONTINUE... [UND18B2A]

>UND18B2A<

(This is a scientific research study and the quality of data is essential. We monitor our interviewer's work in several ways. One very important check is to call some of the residences that were contacted to ensure the interviewer followed proper procedures and behaved professionally and courteously.)

We would like to ask this teen a few questions to help us verify the quality of our interviewer's performance. Would now be a convenient time for you to put me in touch with this teen?

- <1> YES, RESPONDENT AVAILABLE [UNDR18CA]
- <2> RESPONDENT UNAVAILABLE [CALLBACK]
- <3> RESPONDENT UNKNOWN [UNKNOWNA]
- <4> RESPONDENT KNOWN, BUT WILL NEVER BE AVAILABLE [UNKNOWNA]

>UNDR18CA<

WHEN SPEAKING WITH TEEN, REINTRODUCE YOURSELF AND CONTINUE.

In recent weeks, our research organization called RTI has been conducting a nationwide survey sponsored by the U.S. Public Health Service. We are making a quick call to residences that were contacted to verify the quality of our interviewer's performance. This will take less than two minutes of your time.

(This is a scientific research study and the quality of data is essential. We monitor our interviewer's work in several ways. One very important check is to call some of the residences that were contacted to ensure the interviewer followed proper procedures and behaved professionally and courteously.)

Our records indicated that you were interviewed.

>ADULTA1A<

In recent weeks, our research organization called RTI has been conducting a nationwide survey sponsored by the U.S. Public Health Service. We are making a quick call to residences that were contacted to verify the quality of our interviewer's performance. This will take less than two minutes of your time.

Our records indicate that a (*adult demo*) in your household was interviewed and that they agreed to verify this interview. We would like to speak to this person to ask him/her a few questions about the interviewer's performance.

ENTER (1) TO CONTINUE... [ADULTA2A]

>ADULTA2A<

(This is a scientific research study and the quality of data is essential. We monitor our interviewer's work in several ways. One very important check is to call some of the residences that were contacted to ensure the interviewer followed proper procedures and behaved professionally and courteously.)

Would now be a convenient time for you to put me in touch with this person?

- <1> SPEAKING WITH TARGET RESPONDENT [A1]
- <2> YES, RESPONDENT AVAILABLE [ADULTBA]
- <3> RESPONDENT UNAVAILABLE AT THIS TIME [CALLBACK]
- <4> RESPONDENT UNKNOWN [UNKNOWNNA]
- <5> RESPONDENT KNOWN, BUT WILL NEVER BE AVAILABLE [UNKNOWNNA]

>NOADULTA<

Is there another adult I could speak to?

- <1> YES, SPEAKING TO HIM/HER [UND18B1A]
- <2> YES, ANOTHER ADULT AVAILABLE [UND18B1A]
- <3> YES, ANOTHER ADULT UNAVAILABLE [CALLBACK]
- <4> NO [UNKNOWNNA]

>UNKNOWNNA<

It is important that we verify our interviewer made contact with someone at this number concerning (address). Is this the correct phone number for (address)?

- <1> YES [A1C]
- <2> NO [A1C]

>ADULTBA<

ONCE SPEAKING WITH THE TARGET RESPONDENT:

I'm calling from a research organization called RTI located in North Carolina. In recent weeks, we have been conducting a nationwide survey sponsored by the U.S. Public Health Service. We are making a quick call to residences that were contacted to verify the quality of our interviewer's performance. This will take less than two minutes of your time.

Our records indicate that you were interviewed.

ENTER (1) TO CONTINUE... [A1]

>A1<

Did you complete an interview for this study?

- <1> YES [A2A]
- <2> NO [A1A]

>A1A<

You would have answered questions on topics such as tobacco, alcohol, and health care and you would have used a laptop computer that the interviewer supplied. Does this sound familiar?

- <1> YES [A2A]
- <2> NO [A1B]

>A1B<

Were you ever contacted by one of our interviewers?

- <1> YES, BUT RESPONDENT DOES NOT REMEMBER COMPLETING INTERVIEW [A8]
- <2> YES, AND RESPONDENT DOES REMEMBER COMPLETING INTERVIEW [A2A]
- <3> NO [A1C]

>A1C<

Our interviewer is (*FI Description*), and would have been wearing a white badge with a picture I.D. (*FI Pronoun*) may have been carrying a computer. Did this person ever contact you?

- <1> YES, BUT RESPONDENT DOES NOT REMEMBER COMPLETING INTERVIEW [A8]
- <2> YES, AND RESPONDENT DOES REMEMBER COMPLETING INTERVIEW [A2A]
- <3> NO [A8]
- <4> YES, BUT SPEAKING TO ANOTHER HH MEMBER (NOT INTERVIEW RESPONDENT) [A8]

>A2A<

Was the interview completed entirely in person, over the phone, or in some other way?

- <1> ENTIRELY IN PERSON [A3A]
- <2> OVER THE PHONE [A2B]
- <3> SOME OTHER WAY [A2AELB1]

>A2AELB1<

Would you please tell me more about that?

ENTER RESPONDENT'S ANSWER VERBATIM.

IF IT BECOMES APPARENT THAT THE INTERVIEW WAS COMPLETED EITHER ENTIRELY IN PERSON OR OVER THE PHONE, USE THE BACKUP KEY AND RE-CODE A2A. [A2AELB2]

>A2AELB2<

ENTER ADDITIONAL COMMENTS UP TO 40 CHARACTERS.
IF NO ADDITIONAL COMMENTS, ENTER "NONE". [A3A]

>A2B<

When the interviewer called you by telephone, did (*FI Pronoun*) make an appointment to see you or did (*FI Pronoun*) complete our survey by telephone -- asking questions about tobacco, alcohol, drug use and health-related issues over the telephone?

- <1> MADE APPOINTMENT ONLY [A3A]
- <2> COMPLETED SURVEY QUESTIONS [A7A]
- <F3> DON'T KNOW [A3A]
- <F4> REFUSE [A3A]

>A3A<

Did our interviewer provide you with a computer for you to enter some of your responses?

- <1> YES [A4]
- <2> NO [A3B]

>A3B<

Was there a specific reason why you could not enter your responses in the computer if asked to do so?

- <1> YES [A3BELB1]
- <2> NO [A3C]

>A3BELB1<

Would you please tell me more about that?

ENTER RESPONDENT'S ANSWER VERBATIM.
IF NO COMMENTS, ENTER "NONE".

IF, AS THE RESPONDENT IS ELABORATING, IT BECOMES APPARENT THAT THE INTERVIEWER DID GIVE THE R THE COMPUTER, BACKUP TWO QUESTIONS AND CHANGE THE RESPONSE TO A3A. [A3ELB2]

ENTER ADDITIONAL COMMENTS UP TO 40 CHARACTERS.

IF NO ADDITIONAL COMMENTS, ENTER "NONE". [A3BELB3]

>A3BELB3<

ENTER ADDITIONAL COMMENTS UP TO 40 CHARACTERS.

IF NO ADDITIONAL COMMENTS, ENTER "NONE". [A3C]

>A3C<

Did the interviewer give you the option of entering your answers into the computer?

- <1> YES [REFCAL1]
- <2> NO [REFCAL1]
- <F3> DON'T KNOW [REFCAL1]

>A4<

Did you complete a short set of questions that showed you how to enter your responses in the computer before you began the interview questions? (For example,) One of the questions asked you what color your eyes are.

- <1> YES [A5]
- <2> NO [A5]
- <F3> DON'T KNOW [A5]

>A5<

Did the interviewer attach a set of headphones to the computer and show you how to use them?

- <1> YES [A6A]
- <2> NO [A6A]
- <F3> DON'T KNOW [A6A]

>A6A<

Did you have any difficulty using the computer to answer the questions?

- <1> YES [A6B]
- <2> NO [REFCAL1]

>A6B<

Was your interviewer able to assist you when you experienced these difficulties?

- <1> YES [REFCAL1]
- <2> NO [A6BELB1]

>A6BELB1<

Would you please tell me more about that?

ENTER RESPONDENT'S ANSWER VERBATIM.
IF NO COMMENTS, ENTER "NONE". [A6BELB2]

>A6BELB2<

ENTER ADDITIONAL COMMENTS UP TO 40 CHARACTERS.

IF NO ADDITIONAL COMMENTS, ENTER "NONE". [A6BELB3]

>A6BELB3<

ENTER ADDITIONAL COMMENTS UP TO 40 CHARACTERS.

IF NO ADDITIONAL COMMENTS, ENTER "NONE". [REFCAL1]

>REFCAL1<

Did the interviewer identify a 30 day period and a 12 month period on a green colored monthly calendar and give it to you to refer to during the interview?

- <1> YES [A7A]
- <2> NO [REFCAL2]
- <F3> DON'T KNOW [REFCAL2]

>REFCAL2<

The green colored calendar was to be used by you to help recall your experiences in the thirty days prior to the interview date and the year prior to the interview date. Thinking carefully about it, do you remember the interviewer handing you a green colored calendar to use during the interview?

- <1> YES [A7A]
- <2> NO [A7A]
- <F3> DON'T KNOW [A7A]

>A7A<

About how many minutes did it take to complete the interview? Please include the entire time of the interview - from start to finish.

- <1> LESS THAN 25 MINUTES [IF 12-17 GO TO A7B, IF 18+ GO TO A7E]
- <2> 25 - 60 MINUTES [A8]
- <3> OVER 1 HOUR [A8]
- <F3> DON'T KNOW [A8]

>A7B<

IF R IS 12-17:

Did the interviewer ask an adult some questions during the interview?

- <1> YES [A7C]
- <2> NO [A8]

>A7C<

Was that time included in your answer?

- <1> YES [IF A2B=2 GO TO A8 OTHERWISE GO TO FAST]
- <2> NO [A7D]

>A7D<

Including the time with the adult, how many minutes did the entire interview take – from the first question through the final question?

- <1> LESS THAN 25 MINUTES [IF A2B=2 GO TO A8 OTHERWISE GO TO FAST]
- <2> 25 - 60 MINUTES [A8]
- <3> OVER 1 HOUR [A8]
- <F3> DON'T KNOW [A8]

>A7E<

Does this include the entire time of interview -- from the first question through the final question?

- <1> YES [IF A2B=2 GO TO A8 OTHERWISE GO TO FAST]
- <2> NO [A7F]

>A7F<

About how many minutes did the interview take -- from start to finish?

- <1> LESS THAN 25 MINUTES [IF A2B=2 GO TO A8 OTHERWISE GO TO FAST]
- <2> 25 - 60 MINUTES [A8]
- <3> OVER 1 HOUR [A8]
- <F3> DON'T KNOW [A8]

>FAST<

Did the interviewer tell you how you could make the interview go faster on the computer?

- <1> Yes [FASTER]
- <2> No [A8]

>FASTER<

What did the interviewer tell you?

- <1> TOLD ME TO JUST ANSWER "NO" TO (OR REFUSE) ALL OR MOST QUESTIONS [A8]
- <2> TOLD ME TO JUST ANSWER WITHOUT READING OR LISTENING TO THE QUESTIONS. [A8]
- <3> TOLD ME TO READ THE QUESTIONS ON MY OWN INSTEAD OF LISTENING TO THEM OVER THE HEADPHONES [A8]
- <4> SOMETHING ELSE, PLEASE SPECIFY [FASTELB1]

I was given this telephone number to verify that our interviewer made contact with someone that either lives at or is knowledgeable about (*address*). Is there anyone at this number who might be familiar with (*address*) or with our interviewer who is (*FI Description*) and would have asked questions such as how many people live in this household, their ages and race?

- <1> YES, RESPONDENT IS [C1A]
- <2> YES, SOMEONE ELSE IS [SPEAKC]
- <3> NO [DONEC]
- <F3> DON'T KNOW [DONEC]
- <F4> REFUSE [DONEC]

>SPEAKC<

May I speak with this person?

- <1> YES [C1INTRO]
- <2> NO (THIS RESPONSE WILL TAKE YOU TO THE CALLBACK SCREEN)
[CALLBACK]

>C1INTRO<

In recent weeks, our research organization called RTI has been conducting a nationwide survey sponsored by the U.S. Public Health Service. We are making a quick call to residences that were contacted to verify the quality of our interviewer's performance. This will take less than two minutes of your time.

Are you familiar with (*address*)?

(This is a scientific research study and the quality of data is essential. We monitor our interviewer's work in several ways. One very important check is to call some of the residences that were contacted to ensure the interviewer followed proper procedures and behaved professionally and courteously.)

- <1> YES [C1A]
- <2> NO [NORES3C]
- <F3> DON'T KNOW [NORES3C]
- <F4> REFUSE [NORES3C]

>NORES3C<

I was given this telephone number to verify that our interviewer made contact with someone that either lives at or is knowledgeable about (*address*). Is there anyone at this number who might be familiar with (*address*) or with our interviewer who is (*FI Description*) and would have asked questions such as how many people live in this household, their ages and race?

- <1> YES, RESPONDENT IS [C1A]

Verification Script for Codes 10, 13, 18, 26

General Information:

All skips or routing instructions to be programmed are noted next to response in brackets []

All fills are designated by italics text in parens (*address*)

(*FI Pronoun*): he/she based on FI's gender

(*FI Description*): age, gender, height, race

Program fill for past or future tense as follows:

Use the first portion of the fill (*will/did*) (*stay/stayed*)

If Qtr 1 and call is before Feb 15, else use second portion

If Qtr 2 and call is before May 15, else use second portion

If Qtr 3 and call is before August 15, else use second portion

If Qtr 4 and call is before November 15, else use second portion

Program fill for (*3-month quarter field period*)

Qtr 1= January, February, March

Qtr 2= April, May, June

Qtr 3= July, August, September

Qtr 4 = October, November, December

(*Screening Date*) fill: Date of final Screening Code

Screening Information Provided for Codes 10,13,18,26:

CaseID

Phone number (designates home or work phone)

Address

Notes to Verification Caller [Additional data from Newton]

First Name

Screening Date (date of final Screening code)

Screening Script:
