

As a student intern in the Division of Neurology Products you will learn about the drug development process as well as the overall structure of FDA and the functions of its main operational components (CFSAN, CBER, CDER, CDRH, CVM and ORA). You will obtain detailed knowledge (by attending internal and pharmaceutical company meetings) on the roles and responsibilities of the project manager as an individual and as part of the drug review team. Additionally, you will learn about the individual discipline roles within CDER related to CDER's public health mission and the potential opportunities for pharmacists in these positions.
