

**NWCG**  
**FIRECODE**  
**Standard Data Values**  
June 15, 2004

Standard data values are provided when a data element has a pre-determined set of terms, codes, and/or numbers that must be used in order for the data to be valid. The purpose of standard data values is to ensure consistency and accuracy within the system and across multiple systems.

---

The FireCode System serves as the system of record for FireCodes and is capable of generating reports that provide complete lists of FireCodes in Microsoft Excel format.

Access to the reports can be obtained by establishing an account at: [www.firecode.gov](http://www.firecode.gov).

Once an account has been established, click on [View Reports] and select the appropriate report and report parameters.

To obtain a report of all FireCodes, use the following parameters:

Agency:	All
Unit:	(Blank)

---

Guidelines for changing this list of standardized data values can be found in the Change Procedures for this data standard.
