

NWCG Data Standard
POINT OF ORIGIN DATUM
Standard Data Values
November 28, 2007

Standard data values are provided when a data attribute has a pre-determined set of terms, codes, and/or numbers that must be used in order for the data to be valid. The purpose of standard data values is to ensure consistency and accuracy within a system and across multiple systems.

The standard data values for this data attribute are defined as part of the NWCG data standard for HORIZONTAL DATUM.

Refer to that data standard for the current list of NWCG's data values to be used for this data attribute.
