## **Construction & Use of Clinometer Protocol Test**

Date Performance Is measured  Level of Performance (see below)  Student activity & Level of Performance + appropriate student performance - inappropriate student performance n.a. not appropriate or not observed												
Collect:     clinometer sheet     table of tangents     cardboard     drinking straw     metal nut/washer     15 cm of thread/floss     glue, scissors     hole-punch, tape												
Construct Clinometer	/											
Attach clinometer to one side and table of tangents to other side of cardboard	/.											
Punch hole at marked circle; tie 15 cm. string (attached to metal nut/washer) through hole	/.											
Tape straw along designated line to use as a sight	/.	/										
Using the Clinometer	/.	/										
Stand on level ground with object being measured	/.	/										
Measure & record height of eyes from the ground	/	/										
Sight top of object through clinometer straw	/.	/
