

FINDING OF NO SIGNIFICANT IMPACT

for

**MICOTIL 300 INJECTION FOR USE IN CATTLE
NADA 140-929
ELANCO ANIMAL HEALTH
GREENFIELD, IN**

The Center for Veterinary Medicine has considered the potential environmental impact of this action and has concluded that this action will not have a significant effect on the quality of the human environment and that an environmental impact statement therefore will not be prepared.

Elanco Animal Health is proposing a supplement to NADA 140-929 that would expand the use of the product. The additional use proposed is "For the control of respiratory disease in cattle at high risk of developing BRD associated with *P. hemolytica*."

An environmental assessment (EA), dated January 1990, was provided in support of the original application for this NADA. Additionally, Elanco Animal Health has provided an abbreviated EA, dated October 1996, that addresses the potential environmental impact resulting from the change in use of the product as proposed in the current supplement. The incremental use proposed in this application is not expected to change significantly the concentrations of residues of this product in the environment. Therefore, the original finding of no significant impact has not been altered by this supplement.
