The Center for Veterinary Medicine has considered the potential environmental impact of this action and has concluded that this action will not have a significant effect on the quality of the human environment and that an environmental impact statement therefore will not be prepared.

Schering-Plough Animal Health is requesting approval of an injectable solution containing florfenicol for use in the treatment of bovine respiratory disease. The dosage will be 20 mg/kg body weight administered twice at a 48-hour interval. The product will be available only by prescription.

In support of their application, Schering-Plough has provided an environmental assessment (EA), dated March 5, 1996. The information provided in the EA is adequate to conclude that the manufacture, use, and disposal of NUFLOR® (florfenicol) Injectable Solution are not expected to have a significant impact on the environment.
