

during plant operation would violate a TS requirement.

Valves SA-1, SA-2, SA-77, and SA-78 can be manually closed, as needed during certain accidents, to isolate the steam lines they serve. If SA-1, SA-2, SA-77, and SA-78 are inaccessible due to post-accident environmental conditions, the associated stop check valves can be used to isolate these steam lines. The licensee stated that the amount of time needed by operators to isolate steam using SA-1, SA-2, SA-77, and SA-78, or their associated stop check valves SA-5 and SA-6, has been factored into the accident analyses and resultant dose calculations in the Updated Final Safety Analysis Report.

Thus, as stated in the staff's safety evaluation, modifying valves SA-1, SA-2, SA-77, and SA-78 so that they can meet the operational requirement specified by GDC-57 would reduce the reliability of the TDCA and violate an existing TS. The time needed by operators to manually close SA-1, SA-2, SA-77, and SA-78 or their associated stop check valves SA-5 and SA-6, during an accident, has been factored into accident analyses. The applicable design-basis accident scenarios and consequences continue to be bounding. On such bases, the staff concludes that literal compliance with the operational aspect of GDC-57 is not desirable and the proposed exemption is acceptable.

IV

Accordingly, the Commission has determined that special circumstances are present as defined in 10 CFR 50.12(a)(2)(ii). Specifically, the Commission finds that application of GDC-57 with respect to valves SA-1, SA-2, SA-77, and SA-78 conflicts with existing TS and is not necessary to achieve the underlying purpose of the rule. The underlying purpose of GDC-57 is to ensure that reliable means exist to isolate this type of line when isolation is needed. As discussed above, valves SA-1, SA-2, SA-77, and SA-78, or SA-5 and SA-6, can be manually closed to isolate their respective steam lines. Thus, the design of these valves and the existence of appropriate procedures for manually closing these valves provide a reliable method of isolating the steam lines when needed. The Commission hereby grants the licensee an exemption from the requirement of 10 CFR part 50, appendix A, GDC-57. Specifically, this exempts the licensee from having to lock close valves SA-1, SA-2, SA-77, and SA-78 against TS requirements, or having to so modify them that they become automatic, or are capable of remote manual operation.

Pursuant to 10 CFR 51.32, the Commission has determined that granting of this exemption will have no significant effect on the quality of the human environment (64 FR 50839).

This exemption is effective upon issuance.
