

Dear Ms. _____

The manufacturer of Lunelle™ Monthly Contraceptive Injection is recalling this product due to a lack of assurance of full potency and possible risk of pregnancy. If you have received a Lunelle injection since January 2002 from your healthcare provider, you should now use an additional barrier method of birth control (such as condoms, diaphragm, or spermicide), before beginning a new form of hormonal contraception.

This recall includes all Lunelle prefilled syringes currently on the market and the product will be unavailable for the immediate future. Therefore, it is necessary to discuss alternative means of contraception and to perform a pregnancy test. The manufacturer is providing free pregnancy test kits and condoms to healthcare professionals that administer Lunelle injections. Please contact our office at _____ so that we can assist you with this matter.

Respectfully,

You can also contact Pharmacia, the manufacturer of Lunelle at 888-691-6813 for questions regarding this recall.
