

Intermountain CHP Regional Application Center

FACT SHEET

About Us

RAC: The Intermountain CHP Center was formed by the Department of Energy (DOE) to promote greater adoption of CHP in Arizona, Colorado, New Mexico, Utah, and Wyoming. The center provides free technical & economic feasibility screenings, workshops & trainings, case studies, and policy review and reform.

Initiative: The Intermountain CHP Initiative is an alliance of project developers, industry, utilities, environmental, and governmental organizations that work on removing governmental and marketplace barriers to clean and efficient CHP. The initiative was formed in April 2004. The initiative holds monthly meetings and occasional webcasts. Two subcommittees include interconnection/policy and marketing/education/outreach.

Items unique to the Intermountain Region include: low electricity prices, fewer transmission grid congestion issues (compared to other regions), and more potential for rural and agricultural applications (as opposed to industrial applications).
