

## Research to Practice

Research to Practice (**r2p**) is a collaborative process between NIOSH and its partners that combines the generation of knowledge with the adoption of that knowledge in the workplace to reduce worker injury and illness.

### How is **r2p** accomplished?

**Prioritize:** Conduct research that addresses the most important occupational health and injury issues facing workers.

**Partner:** Work together with both internal and external partners to encourage workplace adoption and use of research findings.

**Target:** Adapt research results into information products tailored to the target audience.

**Translate:** Transfer and translate research findings, technologies and information into prevention practices and procedures.

**Disseminate:** Use communication science to guide the movement of research into the workplace.

**Evaluate:** Build data collection into each program to determine effectiveness in preventing workplace injury and illness.

**r2p** is relevant to all research conducted by NIOSH.

For more information about **r2p** please contact the **r2p** office (513-533-8381) or visit <http://www.cdc.gov/niosh/r2p/>

RELEVANCE AND IMPACT THROUGH  
RESEARCH TO PRACTICE
