

request: 1,240 hours (an average of approximately 2.0 hours per each initial and follow-up report) for all existing Agreement States reporting.

7. *Abstract:* NRC regulations require NRC licensees to report incidents and events involving the use of radioactive byproduct, source and special nuclear material, such as those involving a radiation overexposure, leaking or contaminated sealed source(s), release of excessive contamination of radioactive material, lost or stolen radioactive material, equipment failures, and abandoned well logging sources. Medical events are required to be reported in accordance with 10 CFR 35.3045. Agreement State licensees are also required to report these events and medical events to their individual Agreement State regulatory authorities under compatible Agreement State regulations. NRC is requesting that the Agreement States provide information on the initial notification, response actions, and follow-up investigations on all events involving the use of nuclear materials regulated pursuant to the Atomic Energy Act. The event information should be provided in a uniform electronic format. The consolidation of both NRC and Agreement State incident and event information, involving the use of AEA radioactive materials, into one single national database provides the capability for assessment and trending analysis. A national database provides invaluable information for use in the identification of any facility/site specific or national generic safety concerns that could impact our ability to maintain public health and safety, and security. The identification and review of safety concerns may result in lessons learned, and may also identify generic issues for further study which could result in proposals for changes or revisions to technical or regulatory designs, processes, standards, guidance or requirements.

Submit, by July 1, 2003, comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?
2. Is the burden estimate accurate?
3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?
4. How can the burden of the information collection be minimized, including the use of automated collection techniques or other forms of information technology?
