August 2008

The U.S.-Korea Free Trade Agreement Provides Enhanced Market Access

The U.S.-Korea Free Trade Agreement (FTA) offers tremendous opportunities for U.S. exporters. Nearly 95 percent of U.S. exports of consumer and industrial products will enter Korea duty-free within three years of entry into force of the agreement, including computers and electronic products; auto parts; power generation equipment; chemicals; medical and scientific equipment; and certain wood products. Most remaining tariffs will be eliminated within 10 years. Almost two-thirds of U.S. agricultural exports will be immediately duty-free when the FTA is implemented (\$1.9 billion duty-free out of \$2.9 billion 2005-2007 average).

Recognizing that non-tariff barriers in Korea are often as much of an impediment to market access as tariffs, the FTA includes an extensive set of provisions that will eliminate such measures across sectors, including autos, high technology, pharmaceuticals and medical devices, financial services, and telecommunications. The agreement includes strong transparency provisions, including commitments to publish in advance proposed government regulations that affect trade and to allow a reasonable opportunity for interested parties to provide input. The agreement contains strong provisions on technical barriers to trade to enhance transparency of the regulatory process in Korea and ensure nondiscriminatory treatment for U.S. companies that test and certify products to Korean standards.

Florida Depends on World Markets

Florida's export shipments of merchandise in 2007 totaled \$44.8 billion, up 80 percent from \$25 billion in 2003. Florida ranked sixth among the states in terms of total exports in 2007.

Exports Support Jobs for Florida Workers – Export-supported jobs linked to manufacturing account for an estimated 1.8 percent of Florida's total private-sector employment. One-ninth (11.7 percent) of all

manufacturing workers in Florida depend on exports for their jobs. (2006 data are the latest available.)

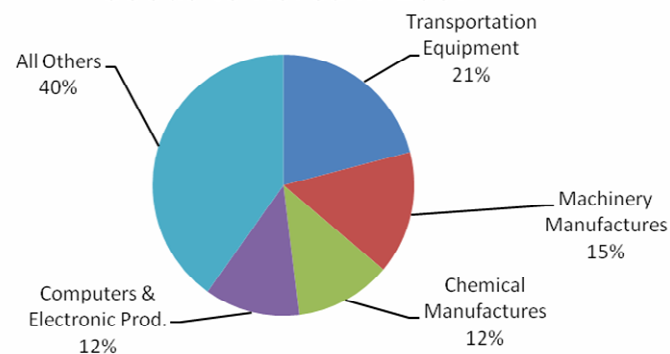

Exports Sustain Thousands of Florida Businesses

A total of 30,313 companies exported from Florida locations in 2006. Of those, 28,775 (95 percent) were small and medium-sized enterprises, with fewer than 500 employees.

Florida SMEs Will Benefit from U.S.-Korea FTA Provisions

Small and medium-sized firms generated nearly two-thirds (63 percent) of Florida's total exports of merchandise in 2006. This was the highest figure among the 50 states, and far above the U.S average of 29 percent. SMEs particularly benefit from the tariff-elimination provisions of free trade agreements. The transparency obligations, particularly those contained in the customs chapters, are also very important to SMEs, which may not have the resources to navigate customs and regulatory red tape.

Florida Exported \$448 Million in Goods to Korea in 2007

The U.S.-Korea FTA Moves the Trade Relationship to Full Partnership

The U.S.-Korea FTA will level the playing field by rectifying the significant tariff imbalance that currently favors Korean exporters over U.S. exporters. Korea's current applied tariffs on industrial goods average 6.2 percent. The average applied U.S. tariff rate is only 2.8 percent - less than half of the Korean rate. Because of these higher tariffs, U.S. exporters do not have equivalent access to the Korean market. The U.S.-Korea FTA levels the playing field and enhances competition because it moves the U.S.-Korea commercial relationship to full partnership and reciprocal commitments.

The Korea FTA Opens New Markets for Key Florida Exports

Computers and Electronic Products - Computers and electronic products accounted for \$12.2 billion of the state's merchandise exports in 2007. The top U.S. exports in this sector included digital integrated circuitry, magnetic tape and navigational equipment. Korean tariffs range between zero and 13 percent. The U.S.-Korea FTA improves market access for computers and electronic products. With the immediate removal of many of these tariffs, U.S. exports will become much more competitive and affordable to Koreans.

Machinery Manufactures - Florida's exports of machinery will benefit from U.S.-Korea FTA tariff reductions. Machinery manufactures accounted for \$5.1 billion of the state's merchandise exports in 2007. Many machinery manufactures will receive duty-free treatment immediately upon entry into force of the agreement, including products such as refrigeration compressors, water filtering and purifying equipment. One hundred percent of agricultural and construction equipment, including bulldozers, mechanical shovels, boring and sinking machinery, and dumpers, will continue to receive duty-free treatment. The elimination of Korean tariffs on U.S. machinery manufactures will provide a competitive boost to U.S. exporters, who will no longer face tariffs as high as 8 percent.

Primary Metal Manufactures - One of Florida's key manufactured export categories is primary metal manufactures, which accounted for \$502 million in 2007. Florida's exporters to Korea will be more competitive as tariffs on most primary metal manufactures will be eliminated immediately upon entry into force of the Agreement, including copper foil and aluminum plates. All remaining tariffs will be phased out within five years. Major infrastructure projects and private sector-led development should continue to provide opportunities for U.S. exporters in this sector.

U.S.-Korea FTA Creates Opportunities for Florida's Agriculture

In 2006, Florida's agriculture exports to the world amounted to \$1.7 billion (latest data available). The U.S.-Korea FTA eliminates tariffs and other barriers on most agricultural products, increasing export opportunities for U.S. agricultural products like those produced in Florida such as citrus, beef, and vegetables. With immediate elimination of duties on more than 60 percent of current U.S. trade, the U.S.-Korea FTA gives U.S. exporters improved access to the Korean market for many of the products that have been highly protected. U.S. exporters shipped \$3.5 billion in farm products to Korea in 2007.

For more information on agricultural exports and the U.S.-Korea FTA, see the fact sheets posted by the U.S. Department of Agriculture at:

Free Trade Works for Florida

In the first four years of the U.S.-Chile FTA (2004-2007), Florida's exports to Chile have grown 99 percent. Since the U.S.-Jordan FTA took effect in 2001, Florida's exports to Jordan have jumped 587 percent. Since the North American Free Trade Agreement (NAFTA) entered into force in 1994, Florida's combined exports to Canada and Mexico have increased 208 percent and since entry into force of the U.S.-Morocco agreement in 2006, the state's exports to that country have grown 86 percent.

All state export data in this report are based on an unrevised Origin of Movement (OM) series. This series allocates exports to state based on transportation origin, i.e., the state from which goods began their journey to the port (or other point) of exit from the United States. The transportation origin of exports is not always the same as the location where the goods were produced. Thus conclusions about "export production" in a state should not be made solely on the basis of the OM state export figures.
