August 2008

The U.S.-Korea Free Trade Agreement Provides Enhanced Market Access

The U.S.-Korea Free Trade Agreement (FTA) offers tremendous opportunities for U.S. exporters. Nearly 95 percent of U.S. exports of consumer and industrial products will enter Korea duty-free within three years of entry into force of the agreement, including computers and electronic products; auto parts; power generation equipment; chemicals; medical and scientific equipment; and certain wood products. Most remaining tariffs will be eliminated within 10 years. Almost two-thirds of U.S. agricultural exports will be immediately duty-free when the FTA is implemented (\$1.9 billion duty-free out of \$2.9 billion 2005-2007 average).

Recognizing that non-tariff barriers in Korea are often as much of an impediment to market access as tariffs, the FTA includes an extensive set of provisions that will eliminate such measures across sectors, including autos, high technology, pharmaceuticals and medical devices, financial services, and telecommunications. The agreement includes strong transparency provisions, including commitments to publish in advance proposed government regulations that affect trade and to allow a reasonable opportunity for interested parties to provide input. The agreement contains strong provisions on technical barriers to trade to enhance transparency of the regulatory process in Korea and ensure nondiscriminatory treatment for U.S. companies that test and certify products to Korean standards.

West Virginia Depends on World Markets

West Virginia's export shipments of merchandise in 2007 totaled \$4.0 billion, a 67 percent increase over the 2003 total of \$2.4 billion.

Exports Support Jobs for West Virginia Workers

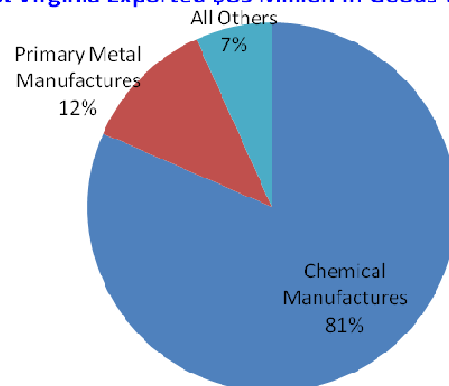

– Export-supported jobs linked to manufacturing account for an estimated 3.7 percent of West Virginia's total private-sector employment. Over one-sixth (17.0 percent) of all manufacturing workers in West Virginia depend on exports for their jobs. (2006 data are the latest available.)

Exports Sustain Hundreds of West Virginia Businesses – A total of 718 companies exported goods from West Virginia locations in 2006. Of those, 514 (72 percent) were small and medium-sized enterprises, with fewer than 500 employees.

West Virginia SMEs Will Benefit from U.S.-Korea FTA Provisions

Small and medium-sized firms generated 11 percent of West Virginia's total exports of merchandise in 2006. SMEs particularly benefit from the tariff-eliminating provisions of free trade agreements (FTAs) and should benefit from the significant tariff cuts under the U.S.-Korea FTA. The transparency obligations, particularly those contained in the customs chapter, are also very important to SMEs, which may not have the resources to navigate customs and regulatory red tape.

West Virginia Exported \$85 Million in Goods to Korea in 2007

The U.S.-Korea FTA Moves the Trade Relationship to Full Partnership

The U.S.-Korea FTA will level the playing field by rectifying the significant tariff imbalance that currently favors Korean exporters over U.S. exporters. Korea's current applied tariffs on industrial goods average 6.2 percent. The average applied U.S. tariff rate is only 2.8 percent - less than half of the Korean rate. Because of these higher tariffs, U.S. exporters do not have equivalent access to the Korean market. The U.S.-Korea FTA levels the playing field and enhances competition because it moves the U.S.-Korea commercial relationship to full partnership and reciprocal commitments.

The U.S.-Korea FTA Opens New Markets for Key West Virginia Exports

Chemical Manufactures - West Virginia's leading manufactured export category in dollar terms is chemical manufactures, which accounted for \$1.5 billion (37 percent) of West Virginia's total merchandise exports in 2007. West Virginia's exporters of chemical and related products, including pharmaceuticals, cosmetics, fertilizers, and agro-chemicals, will benefit from U.S.-Korea FTA tariff reductions. Forty-seven percent of U.S. chemical exports by value will receive duty-free treatment immediately upon entry into force of the agreement, with the remaining tariffs phased out within 10 years. Tariffs on high-trade U.S. products such as halides and copper oxides will be eliminated immediately upon implementation of the Agreement. Current Korean chemical tariffs average 6 percent and can be as high as 50 percent.

Primary Metal Manufactures - One of West Virginia's leading manufactured export categories is primary metal manufactures, which alone accounted for \$322 million of total export shipments in 2007. West Virginia's exporters to Korea will be more competitive as tariffs on most primary metal manufactures will be eliminated immediately upon entry into force of the Agreement, including copper foil and aluminum plates. All remaining tariffs will be phased out within five years. Major infrastructure projects and private sector-led development should continue to provide opportunities for U.S. exporters in this sector.

Transportation Equipment - The transportation equipment sector was another top manufacturing export growth category with exports totaling of \$478 million in 2007. West Virginia's exporters of transportation equipment, including aircraft, fishing vessels, locomotives, and other transportation manufactures, will benefit from U.S.-Korea FTA tariff reductions. Duties on most transportation equipment products will be eliminated immediately, including duties on 87 percent of aircraft and

related parts. Duties on a small group of products will be eliminated over three or ten years.

U.S.-Korea FTA Creates Opportunities for West Virginia's Agriculture

In 2006, West Virginia's agriculture exports to the world amounted to \$42 million (latest data available). The U.S.-Korea FTA eliminates tariffs and other barriers on most agricultural products, increasing export opportunities for U.S. agricultural products like those produced in West Virginia such as poultry, beef, and dairy. With immediate elimination of duties on more than 60 percent of current U.S. trade, the U.S.-Korea FTA gives U.S. exporters improved access to the Korean market for many of the products that have been highly protected. U.S. exporters shipped \$3.5 billion in farm products to Korea in 2007.

For more information on agricultural exports and the U.S.-Korea FTA, see the fact sheets posted by the U.S. Department of Agriculture at:

Free Trade Works for West Virginia

Since the North American Free Trade Agreement's (NAFTA) entry into force in 1994, West Virginia's combined exports to Canada and Mexico grew by 348 percent. In the last three years (2005-2007) the state's exports to the DR-CAFTA region have grown 57 percent.

All state export data in this report are based on the Origin of Movement (OM) series. This series allocates exports to state based on transportation origin, i.e., the state from which goods began their journey to the port (or other point) of exit from the United States. The transportation origin of exports is not always the same as the location where the goods were produced. Thus conclusions about "export production" in a state should not be made solely on the basis of the OM state export figures.
