Flow of Funds Summary Statistics

Third Quarter 2008

Debt of the domestic nonfinancial sectors is estimated to have expanded at a seasonally adjusted annual rate of 7¼ percent in the third quarter of 2008, more than twice as fast as in the previous quarter. The acceleration reflected a pickup in borrowing by the federal government.

Household debt contracted at an annual rate of ¾ percent in the third quarter, after having posted a small increase in the previous quarter. In the third quarter, home mortgage debt decreased at an annual rate of 2½ percent, and consumer credit rose only at an annual rate of 1¼ percent.

Nonfinancial business debt rose at an annual rate of 3 percent in the third quarter, 2¾ percentage points less than in the previous quarter. The slowdown was concentrated in net bond issuance and commercial mortgage borrowing.

State and local government debt increased at an annual rate of 3 percent in the third quarter, about 2 percentage points faster than in the previous quarter. Federal government debt surged at an annual rate of 39¼ percent in the third quarter, the largest quarterly growth rate recorded in the flow of funds accounts.

At the end of the third quarter of 2008, the level of domestic nonfinancial debt outstanding was \$33.0 trillion; household debt was \$13.9 trillion, nonfinancial business debt was \$11.0 trillion, and total government debt was \$8.1 trillion.

Household net worth—the difference between the value of assets and liabilities—was an estimated \$56.5 trillion at the end of the third quarter of 2008, \$2.8 trillion dollars less than in the preceding quarter.

Flow of Funds Accounts, Third Quarter 2008

This publication presents the flow of funds accounts for 2008:Q3.

Data revisions and other changes. The statistics in the attached tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods.

1. In the nonfarm noncorporate business sector (tables F.103 and L.103), data have been revised from 2006:Q1 onward, owing to benchmark statistics available from the IRS/SOI for 2006.

2. The monetary authority sector (tables F.108 and L.108) has been expanded to show new asset and liability detail related to recent Federal Reserve actions.

3. The monetary authority sector (tables F.108, and L.108) was modified to include two new additional liability categories: security RPs and deposits due to government-sponsored enterprises.

4. The funding corporation sector (tables F.130, F.215, L.130, and L.215) was modified to include loans extended by the Federal Reserve to American International Group (AIG) in the liability category bank loans n.e.c.

5. Due to the purchase of a large savings institution by a commercial banking organization in 2008:Q3, the U.S.-chartered commercial banks sector (table F.110) reports larger than usual positive flows in certain instrument categories last quarter, while the savings institutions sector (table F.114) reports some larger than usual negative flows. The asset category most affected by these reclassifications is mortgages; the liability categories most affected are time and savings deposits and other loans and advances.

6. The market value of corporate equities for domestic firms (table L.213, lines 2 and 4) has been revised from 1996:Q4 forward to reflect improved data sources and methods: the value of common shares of publicly traded firms is estimated from quarterly aggregates of micro-data from the Center for Research in Security Prices; the value of preferred shares of publicly traded firms is estimated using a perpetual inventory method based on data from Standard and Poor's and Thomson Financial Services; and the value of closely held firms is estimated using data from the

Internal Revenue Service (IRS), Compustat, and *Forbes*.

7. The market value of residential real estate (B.100, B.102, and B.103) has been revised from 2000:Q1 forward to reflect improved data sources. The value of owner-occupied housing in 2001:Q3, 2003:Q2, and 2005:Q2 is now benchmarked to data from the American Housing Survey, and changes in the value of single-family homes in non-benchmark quarters are now estimated using a repeat-sales house-price index from LoanPerformance (a division of First American CoreLogic). Previously we used a price index from the Federal Housing Finance Agency (formerly the Office of Federal Housing Enterprise Oversight).

Explanatory notes for tables D.1, D.2, and D.3.

Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, agency- and GSE-backed mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

Relation of Flows to Outstandings. Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstanding in the flow of funds accounts are related to the flows in the following way:

Outstanding_t = Outstanding_{t-1} + Flow_t + Discontinuity_t
 where "t" is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated as:

$$\text{Percentage change}_t = (\text{Flow}_t / \text{Outstanding}_{t-1}) * 100$$

Preliminary Estimates. Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between "available" data and "missing" data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

Margins of Uncertainty. Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of "discrepancies" for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

Availability of Data. Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication — the Z.1 release — is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

www.federalreserve.gov/releases/Z1

The Internet site also provides quarterly data beginning in 1952, organized in compressed files that correspond to the tables published in this release. There are files for quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, and debt (tables D.1, D.2, and D.3). This data is also available as a customizable download dataset through the Data Download Program (DDP) at the following location:

www.federalreserve.gov/datadownload/Choose.aspx?rel=Z.1

A *Guide to the Flow of Funds Accounts* is available. The 1,200-page *Guide*, published in two volumes in January 2000, explains in detail how the U.S. financial accounts are prepared and the principles underlying the accounts. The *Guide* can be purchased for \$20.00 from the Board's Publications Services. Publications Services accepts orders accompanied by checks as well as credit card orders.

The Internet site for this release at the location shown above contains a link to an order form for the *Guide* that can be mailed or faxed to Publications Services. In addition, the Internet site includes a link to the *Guide's* descriptions of the tables in the flow of funds accounts.

(1) Consolidated statement for households and nonprofit organizations, nonfarm noncorporate business, and farm business.

(2) Directly held and those in closed-end and exchange-traded funds. Other equities are included in mutual funds (line 14) and life insurance and pension reserves (lines 15 and 16)).

(3) Includes corporate farms.

(4) Line 18 less line 23.

(5) Table F.9, line 13 plus line 4 less lines 3 and 9.

(6) Line 42 and 43 are conceptually equivalent but measure saving using different data. Line 42 is net acquisition of financial assets (line 1) plus net investment in tangible assets net of consumer durables (line 27 less line 41) less net increase in liabilities (line 32) less net capital transfers (line 39). Line 43 is disposable personal income (line 45) less personal outlays (table F.100, line 4).

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 32). The matrix shows a discrepancy in column 17 for monetary gold and SDRs (line 4) because by international accounting convention, such instruments are financial assets without corresponding liabilities.
