

NATIONAL TRANSPORTATION SAFETY BOARD
WASHINGTON, D.C.

ISSUED: August 2, 1979

Forwarded to:

Mr. Bill R. Stokes
Executive Director
American Public Transit Association
1100 17th Street, N.W., Suite 1200
Washington, D.C. 20036

SAFETY RECOMMENDATION(S)

R-79-53

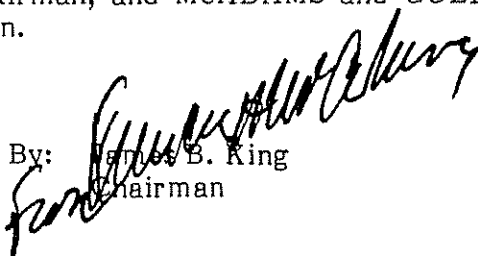

About 6:06 p.m., on January 17, 1979, the fifth and sixth cars of the seven-car westbound train No. 117 of the Bay Area Rapid Transit District (BART) caught fire while moving through the tunnel under the San Francisco Bay between Oakland and San Francisco, California. Forty passengers and two BART employees were evacuated from the burning train through emergency doors into a gallery walkway located between the two single-track tunnels and then into a waiting train in the adjacent tunnel. One fireman died when the gallery suddenly filled with heavy black toxic smoke. Twenty-four firemen, 17 passengers, 3 emergency personnel, and 12 BART employees were treated for smoke inhalation. Property damage was estimated to be \$2,450,000. 1/

Investigation disclosed a poorly fastened undercar equipment cover fell from train No. 363 causing damage and fire to following train No. 117. The investigation also disclosed inadequate inspection procedures, vehicle materials with low flame resistance that produce toxic fumes when burning, and emergency procedures that did not properly coordinate the rescue and firefighting efforts of BART and the Oakland and San Francisco Fire Departments.

Therefore, the National Transportation Safety Board recommends that the American Public Transit Association:

Review and revise as necessary vehicle inspection procedures and emergency evacuation guidelines for Association members to correct deficiencies noted in this investigation. (Class II, Priority Action) (R-79-53)

KING, Chairman, DRIVER, Vice Chairman, and McADAMS and GOLDMAN, Members, concurred in this recommendation.

By: 
James B. King
Chairman
