Re: Docket No. 2004Q-0083: Daily consumption of 40 ounces of typical green tea containing 710µg/mL natural (-)-epigallocatechin gallate (EGCG) may reduce the risk of certain forms of cancer.

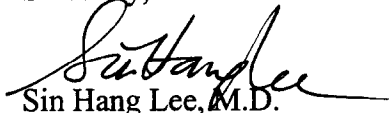

Dear Dr. Ellwood:

Enclosed herewith is a letter that you requested from the petitioner.

I would appreciate it if the FDA posts promptly the attached letter on the FDA web site for the documents under Docket No. 2004Q-0083 for the public to view. An abrupt change in a previously committed agenda which has been posted on the Internet for more than seven months needs an explanation to preserve credibility of the FDA and the petitioner in the public eyes.

Thank you for your cooperation.

Sincerely,

Sin Hang Lee, M.D.
President

Encl.

2004Q-0083
