ISO 19115

Enables describing:

Geospatial data sets.

Maps.

Non-geospatial resources.

Services: portals, web mapping services.

Profile-A standard tailored for a "Community".

<u>Standard</u>		<u>Profile</u>
Broad/complex	→	Narrow focus/often simpler
Generic	→	Specific
Optional	→	Mandatory
Undefined domains	→	Explicit Domains – codelists
	→	Directs implementation

Harmonizing to a Standard

- Multiple standard use.**
- Varied level of content.**
- Long history of working with Canada.**

North American Profile - ISO 19115

Goal.

Meet the geospatial metadata implementation needs of the US through the development of a Profile guidance document.

Objectives.

Comprehensive profile.

Identical content with Canadian Profile.

Release by ANSI same date and time as CSB.

Results in North American Profile: NAP

North American Profile: Approach

No new attributes.

Increase obligations.

Modify codelists...deprecate

Create new codelists for free text fields.

**Recommend structure with in text fields e.g.
address.**

Modify/simplify diagrams.

**Adding best practices to guide
implementation.**

What is XSLT?

“XSLT is a language for transforming XML documents into other XML documents.”

- XSLT is designed for use as part of XSL, which is a stylesheet language for XML.
- XSLT is not intended as a completely general-purpose XML transformation language.
