

National Spatial Data Infrastructure 2002 Cooperative Agreements Program (CAP) Project Contact Information

The National Spatial Data Infrastructure (NSDI) represents a broad consortium of government agencies and non-government organizations that work together to promote more cost-effective production, ready availability, and greater utilization of geospatial data across a wide range of disciplines. The NSDI Cooperative Agreement Program (CAP) was established by the Federal Geographic Data Committee (FGDC) to help form partnerships among organizations to implement the NSDI. Since 1994 the FGDC has provided funding and assistance to over 400 organizations implementing the NSDI. This year's program provided approximately \$386,000 to 29 organizations in four categories. The program's goal is to encourage resource-sharing projects through the use of technology, networking, and more efficient inter-organizational coordination.

For further information see the FGDC website at <http://www.fgdc.gov>; contact the FGDC Secretariat, c/o U.S. Geological Survey, 590 National Center, Reston, VA 20192; telephone 703-648-5513; fax 703-648-5755; or email dpainter@fgdc.gov.

• Category 1: Metadata Implementation Assistance Projects

Creating data about geospatial data (metadata) is an important first step in implementing the NSDI. These projects focus on acquiring the knowledge and experience to create metadata for clearinghouse discovery. Maximum award \$6,000.

• Category 2: Metadata Trainer Assistance

Understanding the metadata standard, and how to apply it to one's data is a difficult first step in implementing data discovery through the clearinghouse. These metadata trainer projects provide metadata training to other organizations that need it. See the FGDC Metadata webpage for information on training sessions. Maximum award \$20,000.

• Category 4: Canadian/U.S. Spatial Data Infrastructure Project

Lake Ontario-St Lawrence River Framework Data Project. This project will develop a geospatial data framework essential for research, management and business operations in the Great Lakes region of New York, Quebec and Ontario. The project will initiate integration, storage, maintenance and accessibility to framework data layers. The project organization will allow for new and different participants, data types, geographic areas and data uses, and can be a model for other collaborative efforts.

The Federal Geographic Data Committee and GeoConnections Canada are jointly funding this project. Canada. GeoConnections (www.geoconnections.org) is developing the Canadian Geospatial Data Infrastructure (CGDI). U.S. award \$74,622. Canadian award \$99,702.
