

Docket OOD-1598, OON-1396

Dear FDA Commissioner, Sincerely,
Dined Loomba

The issue for me is not whether or not the GMO foods are found to be safe or not. Instead I strongly feel that such foods are labelled as such so that I can choose based on what I learn on my own. History is full of cases where substances once believed to be safe are later found to be unsafe. Why is there a worry for your dept. to NOT label the foods if there's such a strong feeling amongst the public?

OON 1396
