2/28/01

Dear Commissioner,

I am opposed to FDA's new proposed rule on genetically engineered food. Voluntary labeling and notification proposals are totally inadequate to protect human health, environmental health and my right to know ingredients so I can make my own choices. Please move to mandatory labeling, safety testing of G.E. foods and a moratorium until we know these foods are safe for us and the rest of the living earth.

Sincerely, Susan S. Morse
