

Dear Sirs:

3-2-00

I, and many others w/ my ongoing knowledge of the subject am/are Totally Against food irradiation & will never buy products from the ongoing list of Companies that are involved. Do your honest homework to find, the very dangerous nutrients are destroyed & the oils made rancid / carcinogenic materials formed. The viruses, fungus & bacteria are not All destroyed, but mutated, leading to more virulent contaminants - Geraldine Dittman, Radiation Safety officer, told you that - money is the driving force. Perhaps if you'll touch on your human side & focus on your conscience, you might do alot of re-considering on what you allow & what you don't - I am totally against gene splicing & its ominous future, also - I am, however, for your leaving the nutrient regulations to those high integrity in the know experts to regulate themselves - You know LITTLE ON THIS SUBJECT BAYSINGER
