

Dear FDA people,

I am most upset to hear of the recent decisions made ^{1581 01 MAR -9 10:44} concerning Genetically Engineered (GE) Foods. It is my understanding that you all have decided not to perform any tests on current & forthcoming GE products, not to require labeling of GE products thereby removing any possible means of determining that products health effects and removing the consumers ability to choose between a GE and non-GE food. It is with these grave concerns in mind, as well as others, that I write to ask that you consider my opinions on this matter during the public comment period. Blessed love to you all and may the peace and love of the universe grace your life.

Thank You

- Josh

- SO:
1. label all GE Food
 2. mandatory testing for toxicity, allergic reactions,
 3. don't be in such a damn hurry to get this stuff on the market and test it.
