

Dear Acting Commissioner Schwetz,

I want irradiated foods to be clearly labeled. "Irradiation" is a term easily understood by everyone. "Electronically pasteurized" or "cold pasteurized" are misleading and deceptive, people may not know what they're getting.

Some people want irradiation, some don't. Consumers should be able to easily read a label to see what they are purchasing. In independent opinion polls, people like myself overwhelmingly want irradiated foods to be labeled "Treated with Irradiation".

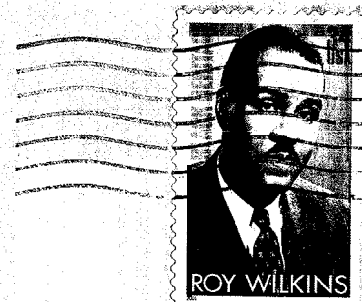

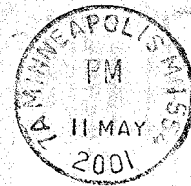

Thank you for your attention.
