Staff Issues V.C. Summer License Renewal Draft Supplemental Generic Environmental Impact Statement for Public Comment

On July 9, 2003, the staff issued draft Supplement 15 to NUREG-1437, "Generic Environmental Impact Statement for License Renewal of Nuclear Plants, Supplement 15, Regarding Virgil C. Summer Nuclear Station" for public comment. The draft supplement includes the staff's preliminary analysis that considers and weighs the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and mitigative measures available for reducing or avoiding adverse impacts. It also includes the staff's preliminary recommendation regarding the proposed action: staff recommends that the Commission determine that the adverse environmental impacts of license renewal for V.C. Summer are not so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable.

Copies of the supplement were filed with the U.S. Environmental Protection Agency (EPA), which will publish a Notice of Filing regarding the draft supplement in the *Federal Register* on July 18, 2003. The notice will provide for a 75-day public comment period which will end on October 3, 2003. The staff has scheduled public meetings on August 26, 2003, in Jenkinsville, South Carolina, to present its analyses and to accept public comments on the draft supplement.

U.S. Department of Energy Site Visit

A representative from the Division of Engineering (DE) participated in a site visit to the Department of Energy (DOE) High Flux Isotope Reactor (HFIR) at Oak Ridge on July 14-15, 2003, as a member of a team consisting of Office of Nuclear Reactor Regulation (NRR) and Region II staff members. In response to a request from Congress for external regulatory oversight by the NRC, DOE has requested that the NRC identify any areas they should address in preparation for licensing of the HFIR. The HFIR was built in late 1960 and was later upgraded to a 0.15 gravity seismic level using DOE criteria.

Recent seismic hazard studies by the NRC identified the Eastern Tennessee Seismic Zone as having a higher seismic hazard. Also, the evaluation of the HFIR for tornado used a wind velocity of 150 miles per hour. For these reasons, protection against natural phenomena was identified as an area that warranted DOE attention.

DOE recently issued an order for a 10-year update of the HFIR facility, and the United States Geological Survey is developing the seismic hazard for the site using its current method of analysis. The tornado wind velocity used for DOE's review will be based on the analysis of most current tornado wind velocity data. The site visit was very effective in determining the usefulness of the data being developed by the DOE's contractor for future NRC review.

Office of Nuclear Material Safety and Safeguards

Week Ending July 18, 2003

Tour of Uranium Enrichment Gas Centrifuge Manufacturing and Test Facilities in Oak Ridge, Tennessee

On July 9, 2003, five NRC officials, including the Deputy Executive Director for Materials, Research, and State Programs, and the Director of the Office of Nuclear Material Safety and Safeguards, visited the U.S. Enrichment Corporation's (USEC's) and Department of Energy's (DOE's) uranium enrichment gas centrifuge manufacturing and test facilities in Oak Ridge, Tennessee. USEC presented the status of its centrifuge deployment and its future plans in this regard. Following this presentation, the NRC officials toured USEC's rotor manufacturing facility and centrifuge test facility. The NRC officials also toured DOE's gas centrifuge enrichment cascade that was shut down in 1985.

Meeting with Rio Algom Mining Company

On July 10, 2003, Division of Fuel Cycle Safety and Safeguards staff met with Rio Algom Mining Company at NRC Headquarters. The purpose of the meeting was to discuss the potential impacts of NRC's 11.e(2) decisions on discharges at the Ambrosia Lake Facility.

U.S. Enrichment Corporation Test Facility

On July 10, 2003, staff from the Division of Fuel Cycle Safety and Safeguards and the Office of the General Counsel met with staff from the Department of Energy (DOE) in a closed meeting to discuss the draft memorandum of understanding (MOU) on regulatory oversight issues related to the U.S. Enrichment Corporation's (USEC's) gas centrifuge uranium enrichment test and demonstration facility (Lead Cascade). This facility is to be housed in an existing DOE Gas Centrifuge Enrichment Plant (GCEP) building at the Portsmouth Gaseous Diffusion Plant site in Piketon, Ohio. The MOU should be finalized by late 2003. NRC is currently reviewing USEC's Lead Cascade license application dated February 12, 2003. NRC anticipates completing its review by February 2004. On July 17, 2003, the NRC staff issued its request to USEC for additional information letter with a requested 45-day response on the Lead Cascade application.

NRC/DOE Quarterly Quality Assurance and Management Public Meetings

On July 15-16, 2003, Office of Nuclear Material Safety and Safeguards staff met with Department of Energy (DOE) staff to discuss quality assurance and management issues concerning the DOE Yucca Mountain High-Level Waste program. Both meetings were multi-connection video conferences hosted at NRC Headquarters, with connections to the Yucca Mountain Site Characterization Office in Las Vegas, Nevada, the Center for Nuclear Waste Regulatory Analyses in San Antonio, Texas, and, for the quality assurance meeting, with NRC Region IV in Arlington, Texas. Various stakeholders, including representatives from the State of Nevada, Nye County, and industry attended at NRC and DOE meeting locations. General Accounting Office personnel and various stakeholders also participated via telecom.

The purpose of the meeting was to discuss the status of the program at the potential repository site at Yucca Mountain, Nevada. Discussion topics included: (1) DOE's quality assurance program; (2) status of significant corrective actions; (3) program improvements, metrics, and effectiveness regarding the license application, procedural compliance, corrective action program, safety-conscious work environment, and staff accountability; and (4) key technical issue and agreement resolution. During each meeting, DOE and NRC reviewed the status of previous action items, closing most of them, and identified some new actions items. The next quarterly NRC/DOE meetings are tentatively scheduled for November 2003 in Las Vegas.

#### Meeting with Department of Energy Regarding Transport of Tritium-Producing Burnable Absorber Rods

On July 16, 2003, Spent Fuel Project Office staff met with the Department of Energy (DOE) to discuss the transport of tritium-producing burnable absorber rods (TPBARs). There are plans to irradiate TPBARs in Tennessee Valley Authority reactors, to produce tritium. DOE plans to use the Model No. NAC-LWT cask (NRC Certificate of Compliance No. 9225) for these proposed shipments. The discussion centered around the possible NRC review of a request to amend the certificate to authorize shipment of the TPBARs.

#### Meeting with BFS Regarding Transport of VSC-24 Canisters in the Model No. TS125 Cask

On July 17, 2003, Spent Fuel Project Office staff met with BNFL Fuel Solutions (BFS) to discuss the transport of VSC-24 spent fuel canisters in the Model No. TS125 Cask (NRC Certificate of Compliance No. 9276), relying on moderator exclusion for criticality control. The VSC-24 canister is part of a storage system that is currently approved under 10 CFR Part 72 (Certificate of Compliance No. 72-1007). BFS is planning for the eventual disposition of the 58 VSC-24 canisters that are currently loaded at three reactor sites. The meeting centered on the various options that BFS is exploring, regarding seeking approval to ship the 58 currently loaded canisters. Discussion topics included burnup credit and a possible exception, under the provisions of 10 CFR 71.55(c), that would include design changes to the transportation configuration of the TS125 cask.

#### International Atomic Energy Agency Transportation Conference

From July 7-11, 2003, staff from the Spent Fuel Project Office attended the "International Conference on the Safety of Radioactive Materials Transport," hosted by the International Atomic Energy Agency (IAEA), in Vienna, Austria. The conference's goal was to exchange information on radioactive material transport issues, and formulate recommendations for international cooperation. There were 534 nominated participants from 82 states; nine intergovernmental organizations, and five non-government organizations, and there were 132 contributed papers. A draft of the conference findings was provided to all participants, on July 11, 2003, and IAEA plans to issue the final findings shortly. It is expected that the conference findings will be presented to the next IAEA General Conference, to consider further action. Key issues discussed at the conference were liability for accidents at sea, the importance of communications between governments and with the public, and the adequacy of the IAEA transport regulations.

Items of Interest  
Week Ending July 18, 2003

Contract Award

A fixed price contract no. NRC-30-03-281 was awarded to Millennium Data Systems, Inc. on July 11, 2004, for administrative support services at Region III. The period of performance is two years with three one-year option periods. The total estimated cost of the contract, inclusive of option years, is \$369,139.00. This procurement was awarded as an 8(a) set-aside, in accordance with the Small Business Administration's Partnership Agreement with the NRC.

Amersham Corporation (Now Known as AEA Technology QSA, Inc.); Denial of Petition for Rulemaking (PRM-34-5)

A document that denies a petition for rulemaking submitted by Amersham Corporation (now known as AEA Technology QSA, Inc.) was published in the Federal Register on July 15, 2003 (68 FR 41757). The petitioner requested that the NRC amend the regulations that specify performance requirements for industrial radiography equipment by removing the reference to associated equipment, clarify certain provisions of the current regulations, and require routine inspection and maintenance of equipment associated with industrial radiography. The petition was denied because the NRC completed several analyses of the regulations applicable to radiography and determined that rulemaking was not necessary to achieve the intent of the petitioner's requests.

Robert H Leyse; Denial of Petition for Rulemaking (PRM-50-73 and PRM-50-73A)

A document that denies two petitions for rulemaking submitted by Robert H. Leyse (PRM-50-73 and PRM-50-73A) was published in the Federal Register on July 16, 2003 (68 FR 41963). The petitioner requested that the NRC amend the regulations to address the effect of crud (a colloquial term for corrosion and wear products such as rust particles that become radioactive when exposed to neutron radiation) on the cooling of the reactor core under the turbulent flow conditions of a loss-of-coolant accident and during normal conditions. The petition was denied because the NRC determined that current regulations require an applicant/licensee to address the impacts of the core geometry change on cooling in the Emergency Core Cooling System (ECCS) analysis; the petitioner's hypothetical discussion of fuel clad performance with severe levels of crud buildup was not supported by modeling, data analysis, or operational data; and technical specifications for monitoring reactor coolant activity have resulted in licensee operational practices for the early detection of coolant activity increase due to crud deposits before these deposits would build to the levels postulated by the petitioner.

Chief Information Officer  
Items of Interest  
Week Ending July 18, 2003

Information Technology (IT) Focus Group Meeting

On July 16-17, 2003, Office of the Chief Information Officer's (OCIO's) Enterprise Architecture/Technical Assessment Team (EATAT) held its periodic IT Focus Group meeting in Rockville. Three vendors presented information about enterprise mobile security solutions, biometric security systems, and recent advances in wireless technologies. Regional staff discussed their use of Personal Data Assistants (PDAs) for inspections, Global Positioning System/Personal Data Assistant (GPS/PDA) systems, and Adobe Capture software for graphics handling. The Office of Nuclear Reactor Regulation (NRR) staff discussed two different pilot projects being conducted in partnership with EATAT: Use of Tablet Personal Computers for Mobile Work Planning, and the Inspector Electronic Support System (IESS). EATAT team members briefed the group on the results of four pilot studies: Fax on demand, wireless email, voice recognition and digital cameras for inspectors.

NRC Chairs Interagency Transitions Lessons Learned Working Group

At a recent General Services Administration sponsored working group meeting, a staff member from the Office of the Chief Information Officer, Information Technology Infrastructure Division was elected to chair the Interagency Transitions Lessons Learned Working Group which meets on a biweekly basis. The group's charter is to define the requirements and processes required for government-wide transition of telecommunications services from the current Federal Technology Services Telecommunications contracts to the proposed Network follow-on contracts. The group met on Monday July 14 to provide a progress briefing to the Interagency Management Council on Telecommunications issues related to transition.

Final Meeting of the External Web Redesign Steering Committee

The NRC External Web Redesign Steering Committee held its final meeting on July 15, 2003. The Director of the Web Publishing and Distribution Services Division provided a brief synopsis of major milestones and accomplishments of the Committee during its approximate three year existence. The Director also mentioned that the NRC's External Web site was cited in a recently published college textbook, "Technical Communication," by John M. Lannon. Mr. Lannon pointed out that a good web site should accommodate users at various levels of technicality and cites the NRC web site as a good source of both general and specialized information. We expect to maintain the site and make future improvements by means of the on-going activities of the Web staff, office Web Liaisons, Web Working Group, and the 3-person Web Advisory Group consisting of representatives from the Office of the Executive Director for Operations, Office of Public Affairs, and Office of the Chief Information Officer.

Freedom of Information and Privacy Act Requests received during the period of July 11 through July 17, 2003:

Week Ending July 18, 2003

Public Meeting to Discuss Application for New Irradiator

Region I DNMS representatives attended a public meeting in Quakertown, Pennsylvania (PA), to discuss the agency's ongoing review of an application for a new irradiator to be operated in Milford Township, PA. Approximately 400 members of the public attended the meeting convened by the Milford Township Board of Supervisors. Gray-Star, Inc., the designer of the underwater irradiator, discussed the irradiator operation, and Region I representatives reviewed the NRC licensing and inspection process for irradiators, as well as the status of the current application. Concerns from the citizens included public knowledge of the pending license application, security, property values, groundwater impacts and potential accident scenarios. A hearing request on this license application is currently under review by a Presiding Officer of an Atomic Safety Licensing Board Panel. In materials cases, the hearing process is on a separate path from the staff's licensing review and does not preclude a licensing decision by the NRC staff. The staff's review of the application is substantially complete and, as indicated at the meeting, a licensing decision is expected in the near future.

Indian Point - Licensee Press Briefing on Upcoming Force-on-Force Exercise

The owner of the Indian Point facility, Entergy, conducted a press briefing on July 16 to discuss preparations for the Force-on-Force exercise. Rudolph Giuliani, former Mayor of New York City and now a consultant to Entergy, was a primary presenter at the briefing. The simulated weapons and equipment to be used by security personnel during the exercise were displayed and demonstrated. Mr. Giuliani answered questions about the realism expected in the exercise, and discussed the value of exercises based on his experience. Media coverage was extensive.

Maine Yankee Community Advisory Panel Meeting

On the evening of July 17, 2003, a representative from the Region I Division of Nuclear Materials Safety (DNMS), briefed the Community Advisory Panel (CAP) for decommissioning the Maine Yankee plant. The presentation is a periodic summary of Region I inspection activities at the plant, and also provides a status of Nuclear Regulatory Commission licensing and confirmatory survey activities. Items discussed included the spent fuel transfer program, shipment of the reactor vessel to the Barnwell, South Carolina, burial site, and the final status survey program. Approximately 20 CAP members, Maine Yankee staff, media representatives, and members of the public were in attendance.

Ginna

Paul Wilkens, President, Rochester Gas and Electric (RG&E), retired on July 10, 2003. James Laurito, President and CEO of RGS Energy Group, a subsidiary of Energy East, will assume the title of President of RG&E. RGS Energy Group is in the process of soliciting bids for its generating assets, which includes the Ginna station. A buyer is expected to be selected by October 2003.
