

IMPORTANT INFORMATION ABOUT THIS WORKBOOK
Risk Map Workbook

Please Select Your Area (e.g. Northeastern Area):

Alaska

There are four general worksheets followed by 15 empty model sheets. Fill out the empty sheets. If you need additional sheets, please start a new file to keep the number of model worksheets to 15 in each file.

If more than 1 file is needed, please update this section with the correct numbers:

This is file

Worksheets:

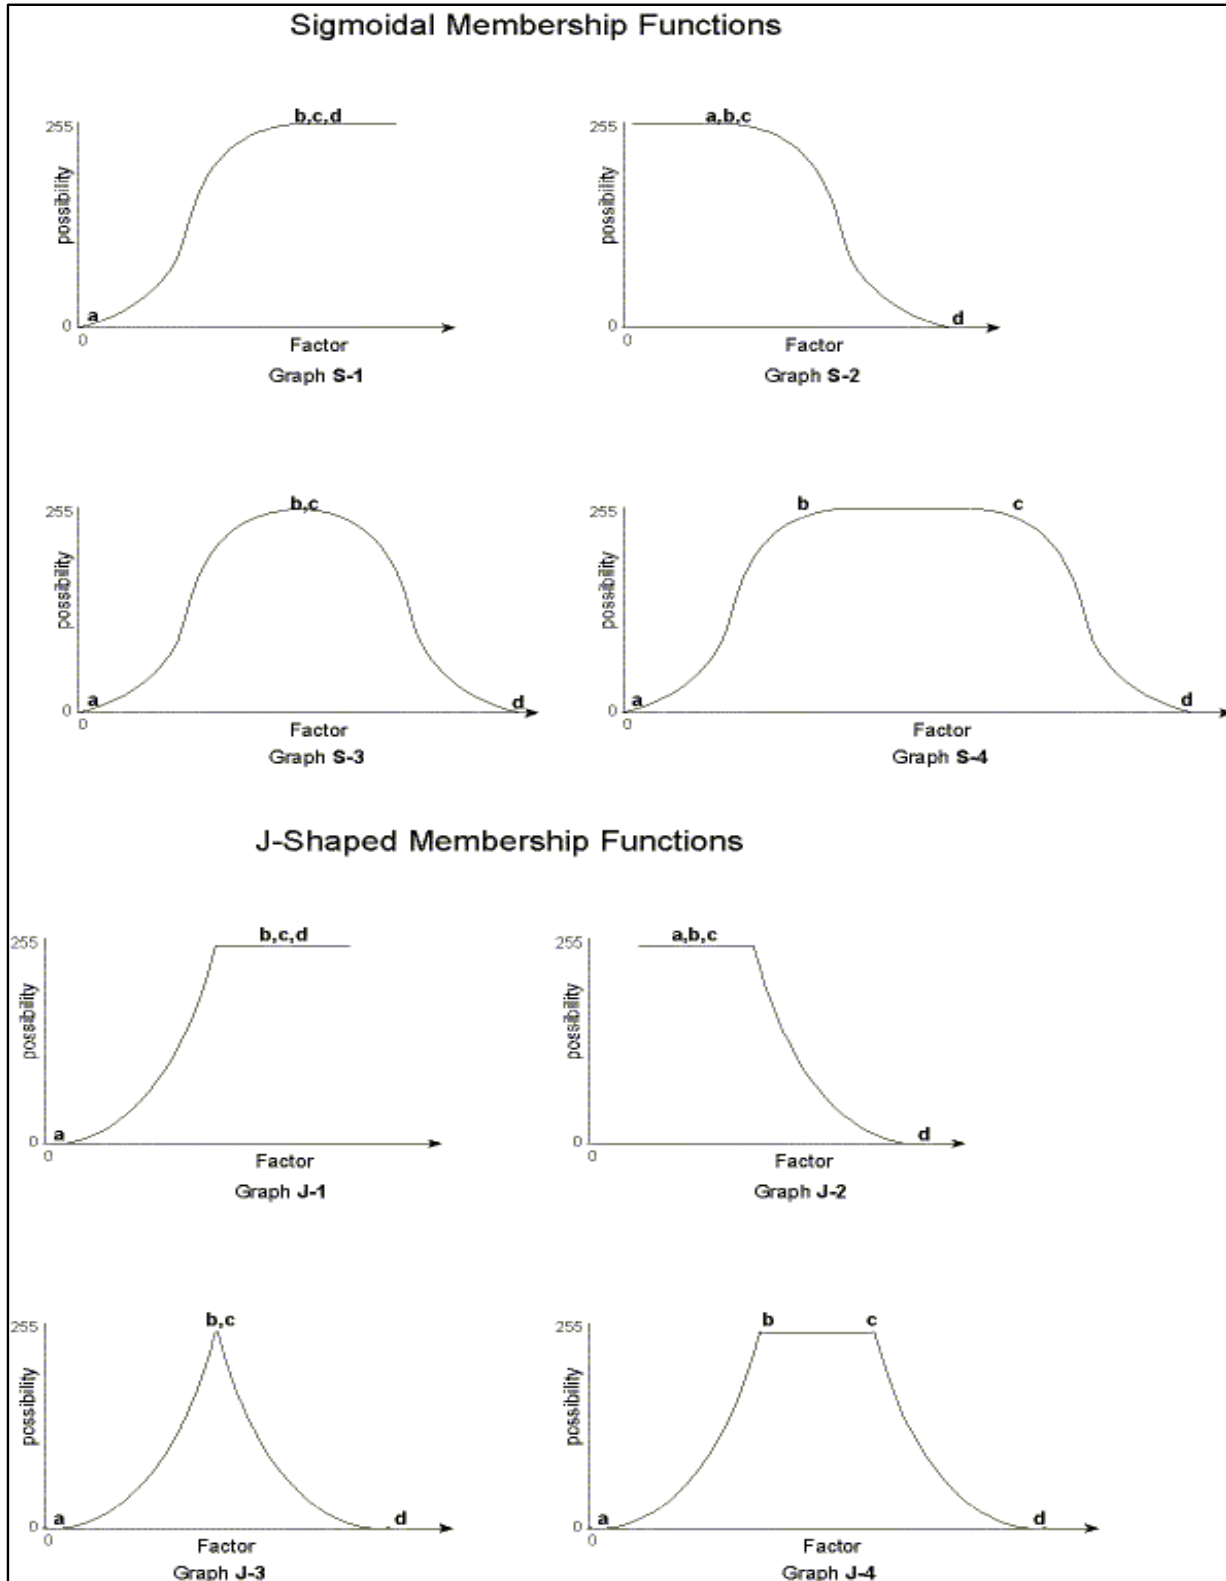

README	This worksheet
Curves	Curve graphics
Risk Rankings	Tool for assisting in developing scales
Citations	Listing and status of models for interior west
Base Sheet	Empty base sheet

Filling out the Model Worksheets

The area in blue on the top of the worksheet is for your use and is not printed. The format has changed slightly from the previous versions.

Risk Agent(s):	Common name of the risk agent, e.g. Spruce budworm
Host(s):	Host tree species, e.g. Balsam fir
Model Extent:	Extent, e.g. Northeastern or list certain ecoregions. If the list of ecoregions is too long for this field, enter them in the comments and put a note in the model extent, such as "Certain IW ecoregions - see comments".
Max Percent Mortality:	Maximum threshold expected (in percent)
Susceptibility/Vulnerability	Enter the Rank for each (or one if only one used) and the Weights will calculate.
Criteria	Enter the criteria following the same rules as the previous worksheets. *Note for rare exceptions (such as the inverse S-3 and S-4) where two sets of A,B,C,D risk values are needed for one criteria, delete the "Criteria X" from the cell. You will have to renumber the remaining criteria.
Criteria Rank/Weight	Enter the Rank value, the Weight will calculate automatically.
Constraints	List any model constraints, if applicable
Comments	Area for information not covered in other fields
Citations	Enter the full citation details (publication, communication, model developer, etc) on the Citations worksheet and assign a number. On the model spreadsheet, enter the citation number in this area. Two example citations are shown, replace with your citations.
Model Certainty	Select the model certainty/source from the dropdown list.

Curves

Risk/Mortality Scaling Tool

To obtain eleven class values (for risk values, mortality thresholds), enter the risk begins and risk peaks values. Equal interval classes will be calculated.

	<u>Input Value</u>	<u>Classes</u>	<u>Scaled Value</u>
Risk Begins (0):	<input type="text" value="20"/>	20	0
		28	1
		36	2
		44	3
		52	4
		60	5
		68	6
		76	7
		84	8
		92	9
Risk Peaks (10):	<input type="text" value="100"/>	100	10

Risk Model Worksheet - Alaska

Risk Agent(s): Alaska Yellow-Cedar Decline

Host(s): Alaska-Yellow-Cedar

Model Extent: Alexander Archipelago

Max Percent Mortality: 25%

Susceptibility

Rank/Weight		Criterion	Risk Begins (a)	Risk Peaks (b)	Risk Decreases (c)	Risk Ends (d)	Curve	Rank	Weight
	0%								
Criteria 1									
Criteria 2									
Criteria 3									
Criteria 4									
Criteria 5									
Criteria 6									
Criteria 7									
Criteria 8									
Criteria 9									
Criteria 10									

Vulnerability

Rank/Weight		Criterion	Risk Begins (a)	Risk Peaks (b)	Risk Decreases (c)	Risk Ends (d)	Curve	Rank	Weight
1	100%								
Criteria 1		Decline	Low/Medium	High	High	High	Linear	1	40%
Criteria 2		Elevation	0 ft	450 ft	550 ft	1000 ft	S-4	1/2	20%
Criteria 3		Latitude	52 degrees	58 degrees	58 degrees	58 degrees	Linear	1/2	20%
Criteria 4		Aspect	0 degrees	180 degrees	180 degrees	360 degrees	S-3	1/4	10%
Criteria 5		Canopy Closure	40	60	60	100	S-4	1/4	10%
Criteria 6									
Criteria 7									
Criteria 8									
Criteria 9									
Criteria 10									

Constraints Must be within 5 km of decline centers (use as a mask).

Comments Recent work has suggested that this decline phenomena is closely tied to climate change, temperature and snow cover in the spring.

Criteria 6									
Criteria 7									
Criteria 8									
Criteria 9									
Criteria 10									

Constraints constrained to the southcentral area of Alaska, the location where the large scale beetle mortality and birch habitat intersect. Note a birch type map is not well defined for the state of Alaska.

Comments Calculate Vulnerability first since it is a criterion for Susceptibility.
