Comment Text :

1 --> [Transporting nuclear waste hundreds of miles is a danger to the public. It is government's role to protect its citizens. Storing nuclear waste in a single site which is politically expedient rather than scientifically selected is bad policy. The costs of producing nuclear power must be internalized by the producer. There are much safer alternatives to nuclear power. The mistakes of the past should be containerized safely and stored as close to the point of production as possible. The cost to store them should be born by the industry with no risks to the public by transporting the waste hundreds of miles.]
