Comments: Statement Regarding Yucca Mnt. Storage - Please add to the Public Comments regarding the Final EIS for the proposed Yucca Mountain radioactive waste repository.

1 [It has become evident that Government entities no longer work for the American people nor for the good of the environment. As a member of the New Energy Council and as an Aerospace engineer, I have come across more than enough evidence that proves that nuclear energy is nothing more than an expensive and dangerous proposition put forward by special interests. It is also too bad that Governmental employees can't put themselves in a position as people first and realize the magnitude of the disaster they are enabling now and for future generations! If a job is only kept by being silent about the risks, does this job become nothing more than a Juggernaut of our own demise? It is also sad that all of the comments sent to this Governmental Organization pleading for sanity will be lost as a minor footnote! With all of the new and unpredicted events that are becoming more common caused by Global Warming, is it really a prudent to believe that nothing could happen to this storage facility? Do we not owe future generations more than just our best guess on something that could be so disastrous? What will it take for you to bow to reason instead of special interests?]
