```
GARY HOLLIS: Good evening. My name is
4
    Gary Hollis. I'm chairman of the Nye County Board of
5
    Commissioners in Nye County, Nevada. As you are well
5
     aware, Nye County or Nye is the site county for the
    proposed repository at Yucca Mountain.
8.
              As commissioners, we are responsible for
9
     developing county policy as it relates to this project.
10
     then communicating that policy to our Nuclear Waste
11
     Repository Office to implement.
12
               I appreciate DOE for scheduling these
13
     hearings. Nye is a cooperating agency on the
14
     Supplemental to the EIS and is pleased to have had the
15
     opportunity to work with DOE to ensure that our
16
     interests and our concerns are included in that
17
     document. But we reserve the right to make additional
18
     comments and anticipate on doing so. As the rail line
19
     BIS, Nye County will submit formal comments for the
20
21
     record on or before January 10, 2008.
               Pirst, let me say that Nye County is the site
22
     county for the repository. That decision was made long
23
     ago by others. Nye County was not consulted, and we had
24
     no say in that selection. But regardless of being
25
     excluded from the decision-making process, as elected
     officials, we have chosen to engage DOE in this process.
               We are firm in our resolve concerning this,
     and until the law changes and, if it ever does, we
     believe that we need to do everything in our power to
     represent the citizens by providing the oversight needed
```

- 7 to protect the health, safety, economic well-being, and
- 5 quality of life for our residents, protect the
- 9 environment, ensure that the repository operates safely,
- 10 and ensure that whatever transportation system is put in
- 11 place operates safely and serves to advance
- 12 opportunities for economic development throughout our
- 13 county.
- 14 The Nuclear Waste Policy Act was signed into
- 15 law in 1982. It was amended in 1987 to make
- 16 Yucca Mountain the only site characterized. And
- 17 Congress formally designated this site in 2002.
- 18 My colleagues and I refuse to ignore this law
- 19 and lazily assume that the site -- that the State of
- 20 Nevada will prevail in its opposition to this project.
- 21 It would be dangerous and irresponsible not to
- 22 constructively engage DOE during this process when we
- 23 have so much to lose by not doing so.
- 24 The various political leaders of both parties
- 25 insist that decisions about Yucca Mountain should be
- 1 based on sound science. Through our independent
- 2 scientific oversight program, Nye County has produced
- 3 approximately \$30 million worth of studies. And what we
- 4 have observed is that this is not only a technically
- 5 feasible project, but that it can be done safely.
- In fact, we have reason to believe that the
- 7 environmental impact of nuclear weapons testing at the
- 8 Nevada Test Site, which I'd like to point out is solely
- 9 encompassed within Nye County, upgradient from
- 10 Yucca Mountain, puts Nye County citizens at least at a

- 11 related term at greater risk than the repository ever
- 12 will.
- 13 I firmly believe that as long as this is a
- 14 retrievable repository as opposed to a dump that it's
- 15 commonly referred to, we would all be better served if
- 16 it was viewed as a National Energy Reserve and its
- 17 contents viewed as a resource.
- 18 I know -- as I noted previously, Nye County is
- 19 a cooperative agency in the Supplemental EIS. Of
- 20 particular note, in our display in this room is a news
- 21 release that announces the result of a rail economic
- 22 study suggesting that west central Nevada could realize
- 23 significant economic benefit from the construction of a
- 24 railroad designed to serve the repository.
- 25 Also included is a position prepared by the
- 1 Savannah River Site Community Organization that sets
- 2 forth their views of how important Yucca Mountain is to
- 3 them in the context of energy independence, energy
- 4 sufficiency, and energy policy in general.
- 5 As can be seen, Yucca Mountain does not stand
- 6 alone in the arena for energy policy and economic
- 7 growth. Many reputable experts and experienced managers
- 8 and planners from other communities similar to ours see
- 9 and understand the value of this project. At the end --
- 10 in the end, Nye County expects that people who live in
- 11 Nye County and work at Yucca Mountain would live in
- 12 Nye County.
- 13 Finally, consider that at one point in time

- 14 Nevada political leaders actually endorsed this project
- 15 and even attempted to segregate the Yucca Mountain site
- 16 in a separate county, Bullfrog County, with Carson City
- 17 as the county seat, an effort intended to exclude
- 18 Nye County from any potential benefit of that particular
- 19 project.
- In the context of contemporary policy where
- 21 responsible government would have us find solutions as
- 22 opposed to political opportunities, it can certainly be
- 23 said that we were for it before we were against it. As
- 24 I said earlier, the law is what it is. And until the
- 25 law changes or the State prevails in court, we intend to
- 1 remain actively and constructively engaged with DOE
- 2 until the end. (I thank you for the opportunity to
- 3 speak.
