Comment Text :

I --> I cannot believe that educated scientists would approve nuclear waste dump site on a fault line. Does not common sense rule this out? For this reason I oppose use of Yucca Mountain.

Another is transport of a hazardous substance. They just lost a tank of chlorine gas that would of wiped out thousands in Las Vegas. It went sailing through the most populated areas of our town uncontrolled down the railroad track from southwest Vegas to North La Vegas. If the hazardous chemicals we have now can not be managed, how will nuclear waste be managed? another kinda common sense idea: it will not be managed. Then there is the emergency action plan. Are escape routes and warning sirens going to be in place first or will they be installed after a leak and thousands are exposed? When will the people who have the training and knowledge get backbone and stand up for the safety of other Americans?]
