Yucca Mountain project

[It is my recommendation that the caliente rail allingment be used for these reasons the line is shorter and does not go thru Native american lands it also does not go near any large bodies of water it goes where their is not any large population. Now assuming that the rail is constructed utmost care should be taken for safety the trains should not exceed 45 mph. have double security double crews and the crews be changed every 20 days. It is also my opinion that their should be extensive publicity of the completion and opening and use of Yucca Mtn.

The whole world knows of Yucca mtn, and what it is for, Then we should move only about 50% of the waste to the Mtn.

This would relieve some strain on the rest of the country and reduce the probability of attacks on the present repository.

Meanwhile the president should start another repository in secret just as the manhattan project was started in oak ridge.

This could be done under the war act without the approval of the congress and done in secret.

The result would be two repositories one known to the whole world (yucca mtn) and one only known to the president.

In conclusion to much study and monies have been spent on this project and it must go foreward without any more delay.]

Respectfully

Robert J Lea
