1 [Please register my opposition to the Dept. of Energy plan to bury radioactive waste at Yucca Mountain. The rights of Shoshone people to control the use of land per their treaty with the U.S. needs to be respected.]

2 In addition, [there are too many potential hazards related to burying waste over 13 fault lines in a region experiencing dramatic population growth which will be subject to accidents in the transport and handling of the waste. It is a very bad idea and I implore you to rethink the problem utilizing all of this country's scientific resources to otherwise mitigate the harm represented by these materials.

While it might be economically attractive to locate a repository for the waste there, it is an infinitely extravagant expenditure of the health and safety (not to mention the religious freedoms) of people living near the mountain and reliant upon it for spiritual sustenance. The U.S. has got to stop bully other nations into subservience and seeking a less problematic solution for managing the waste is our responsibility.

Please do not allow this project to proceed]

Thank you for your consideration,

Linda Griffith
